Open-design CubeSats
for earthquake
prediction and tsunami
early-warning and
their university-
originated satellite
constellation
observation

Masashi Kamogawa (Japan, UNISEC GLOBAL)

2010 Mw7.0 Haiti Earthquake

2004 Mw9.3 Sumatra Earthquake

CNN

Present EQ prediction is helplessness.
Earthquake (EQ) suddenly occurs for us.

Short-term prediction obviously provides disaster mitigation.

It requires precursor detection.

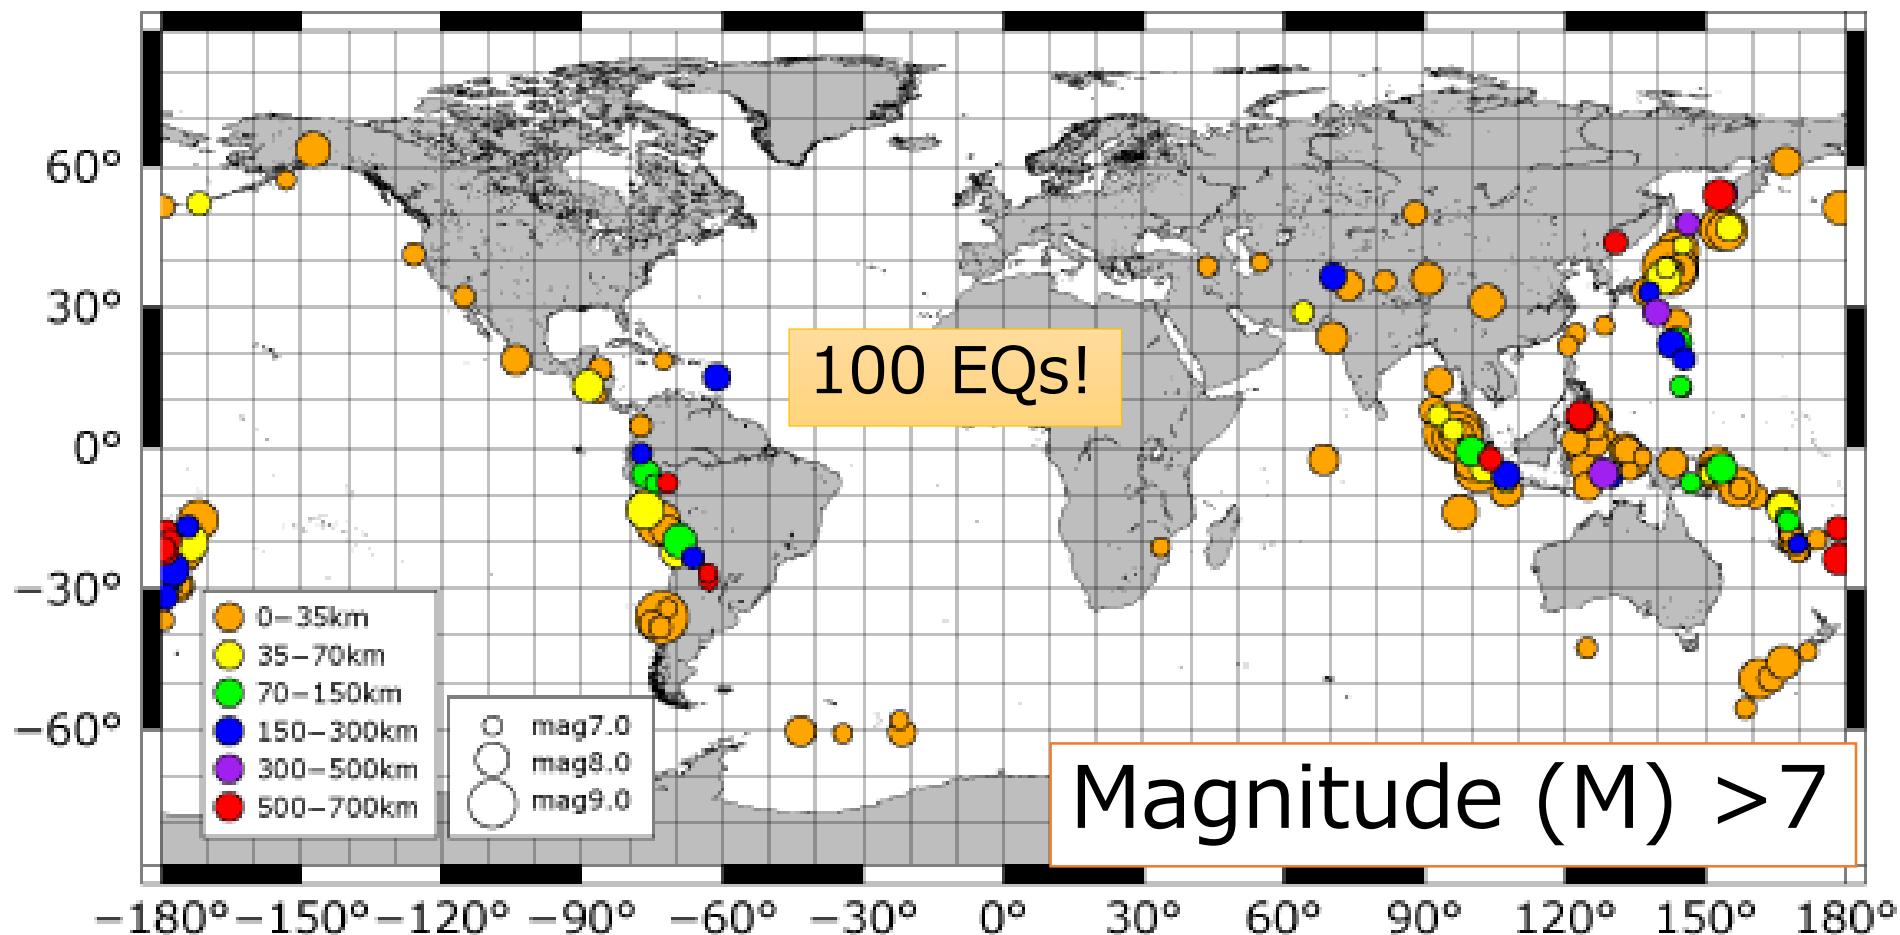

The Mainichi

2005 Mw7.6 Kashmir Earthquake

2011 Mw9.0 Tohoku Earthquake

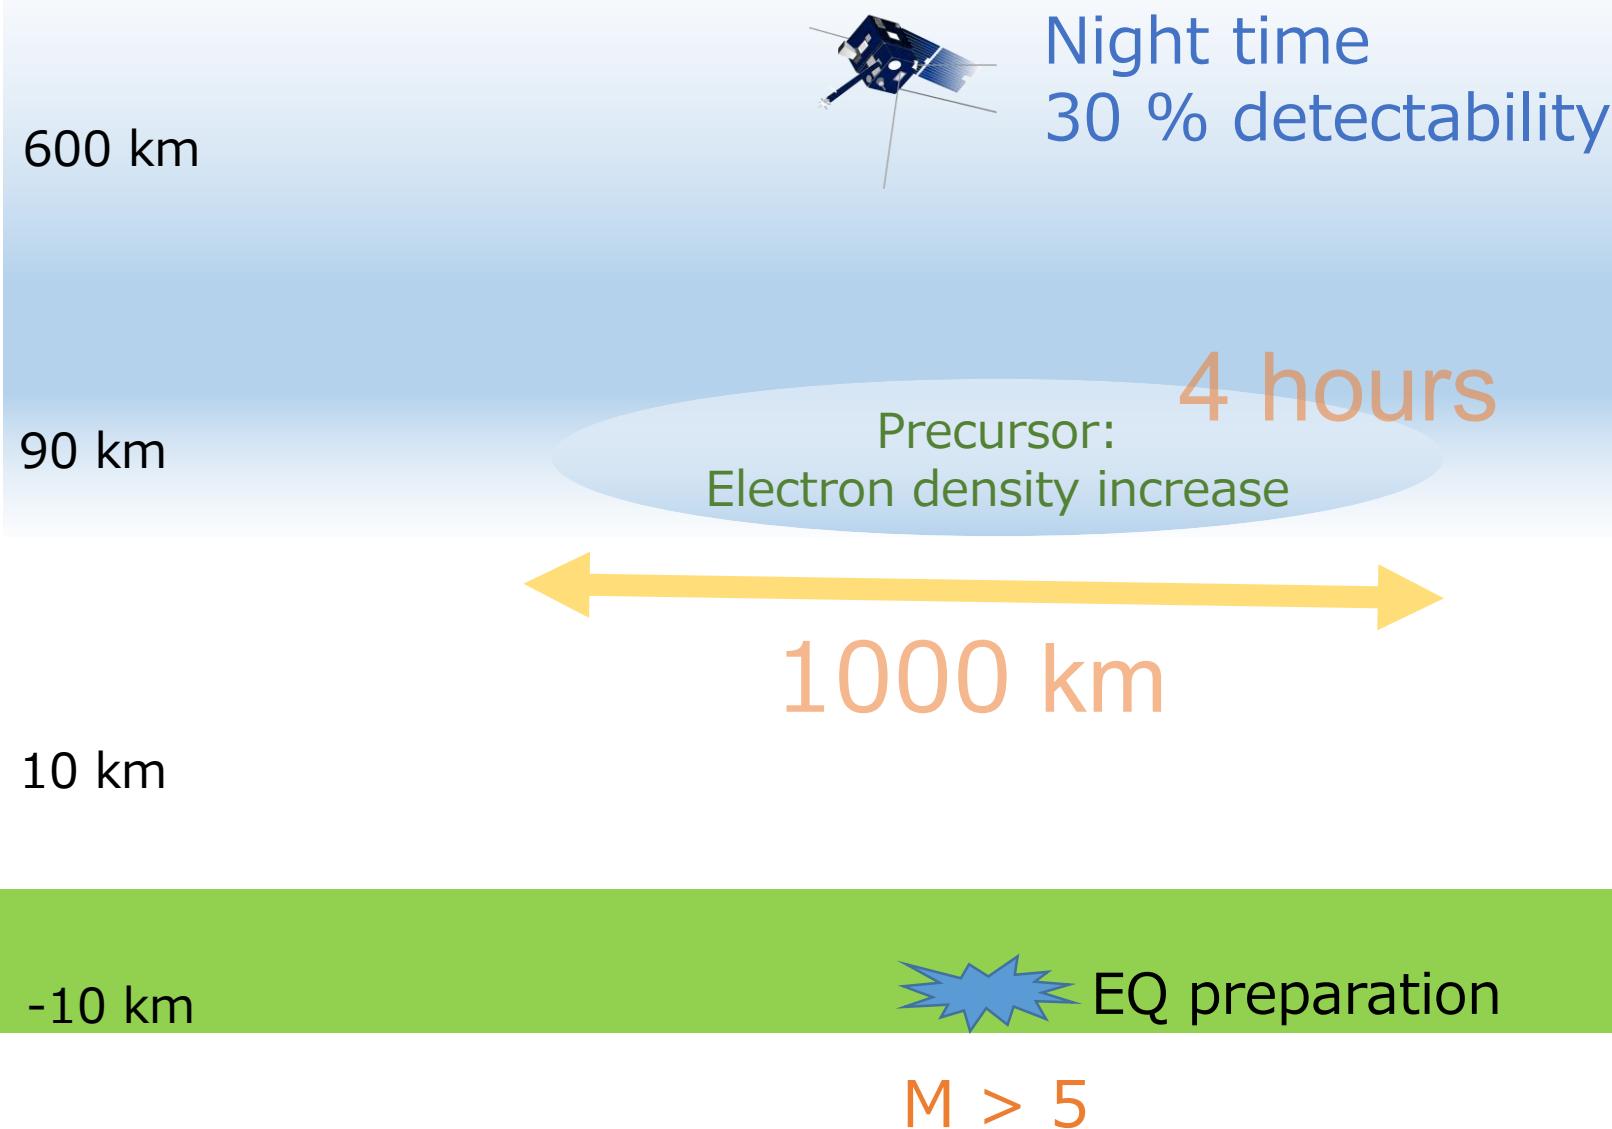

Most large EQ occurred inside land and near ocean.

(USGS, 2000-2011)

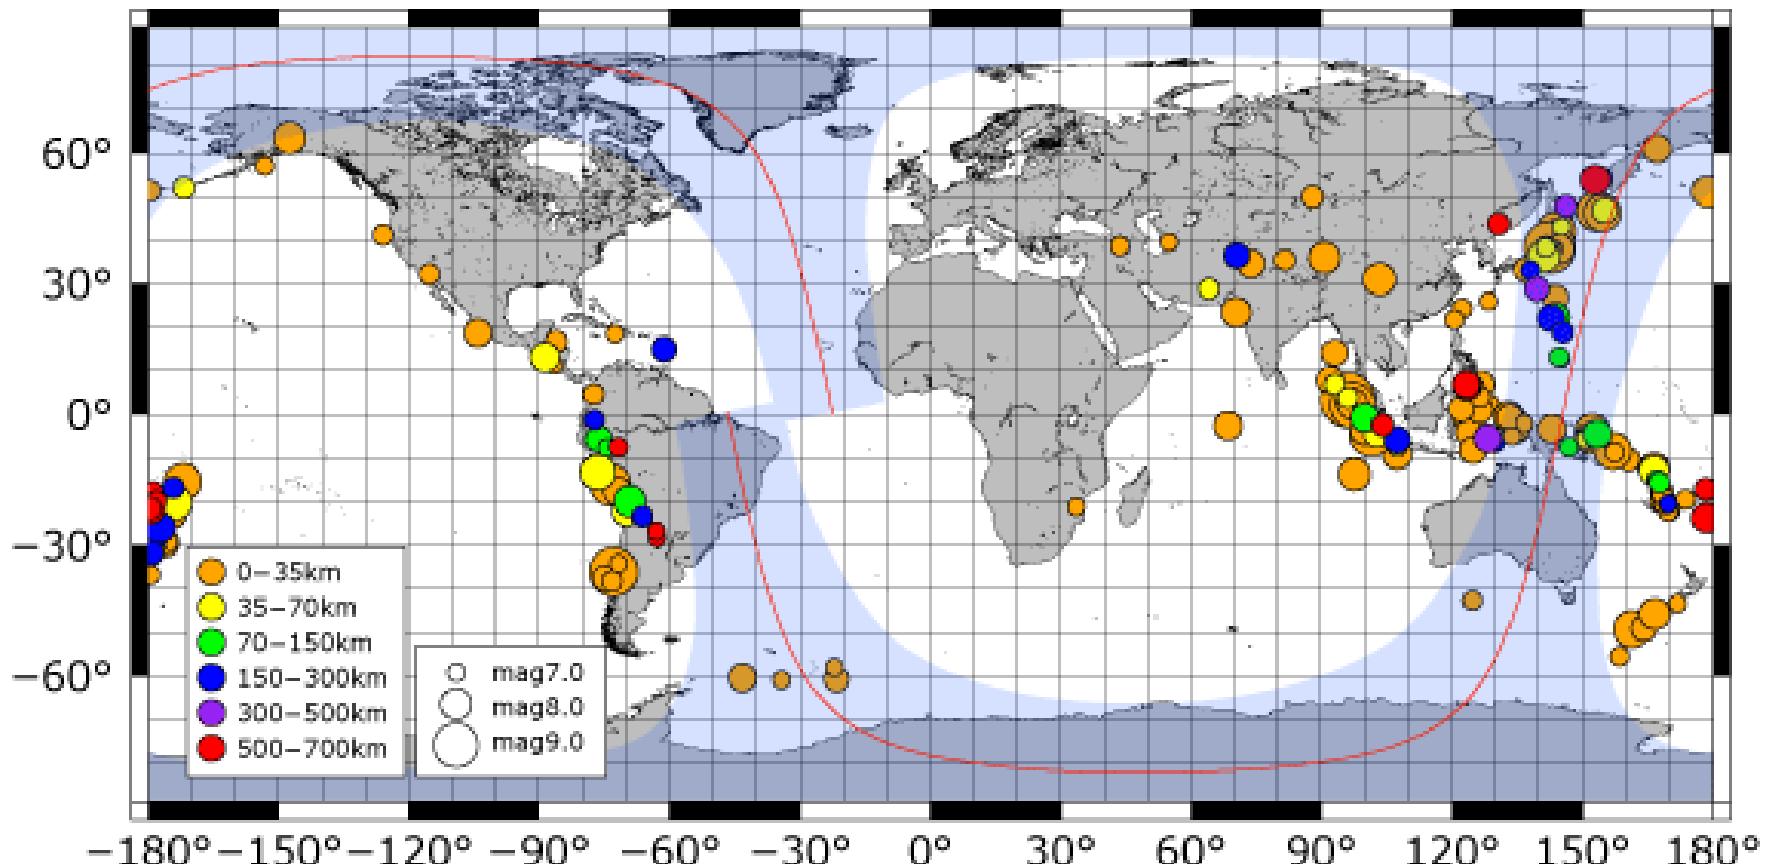

Large EQs are a major risk for human being.

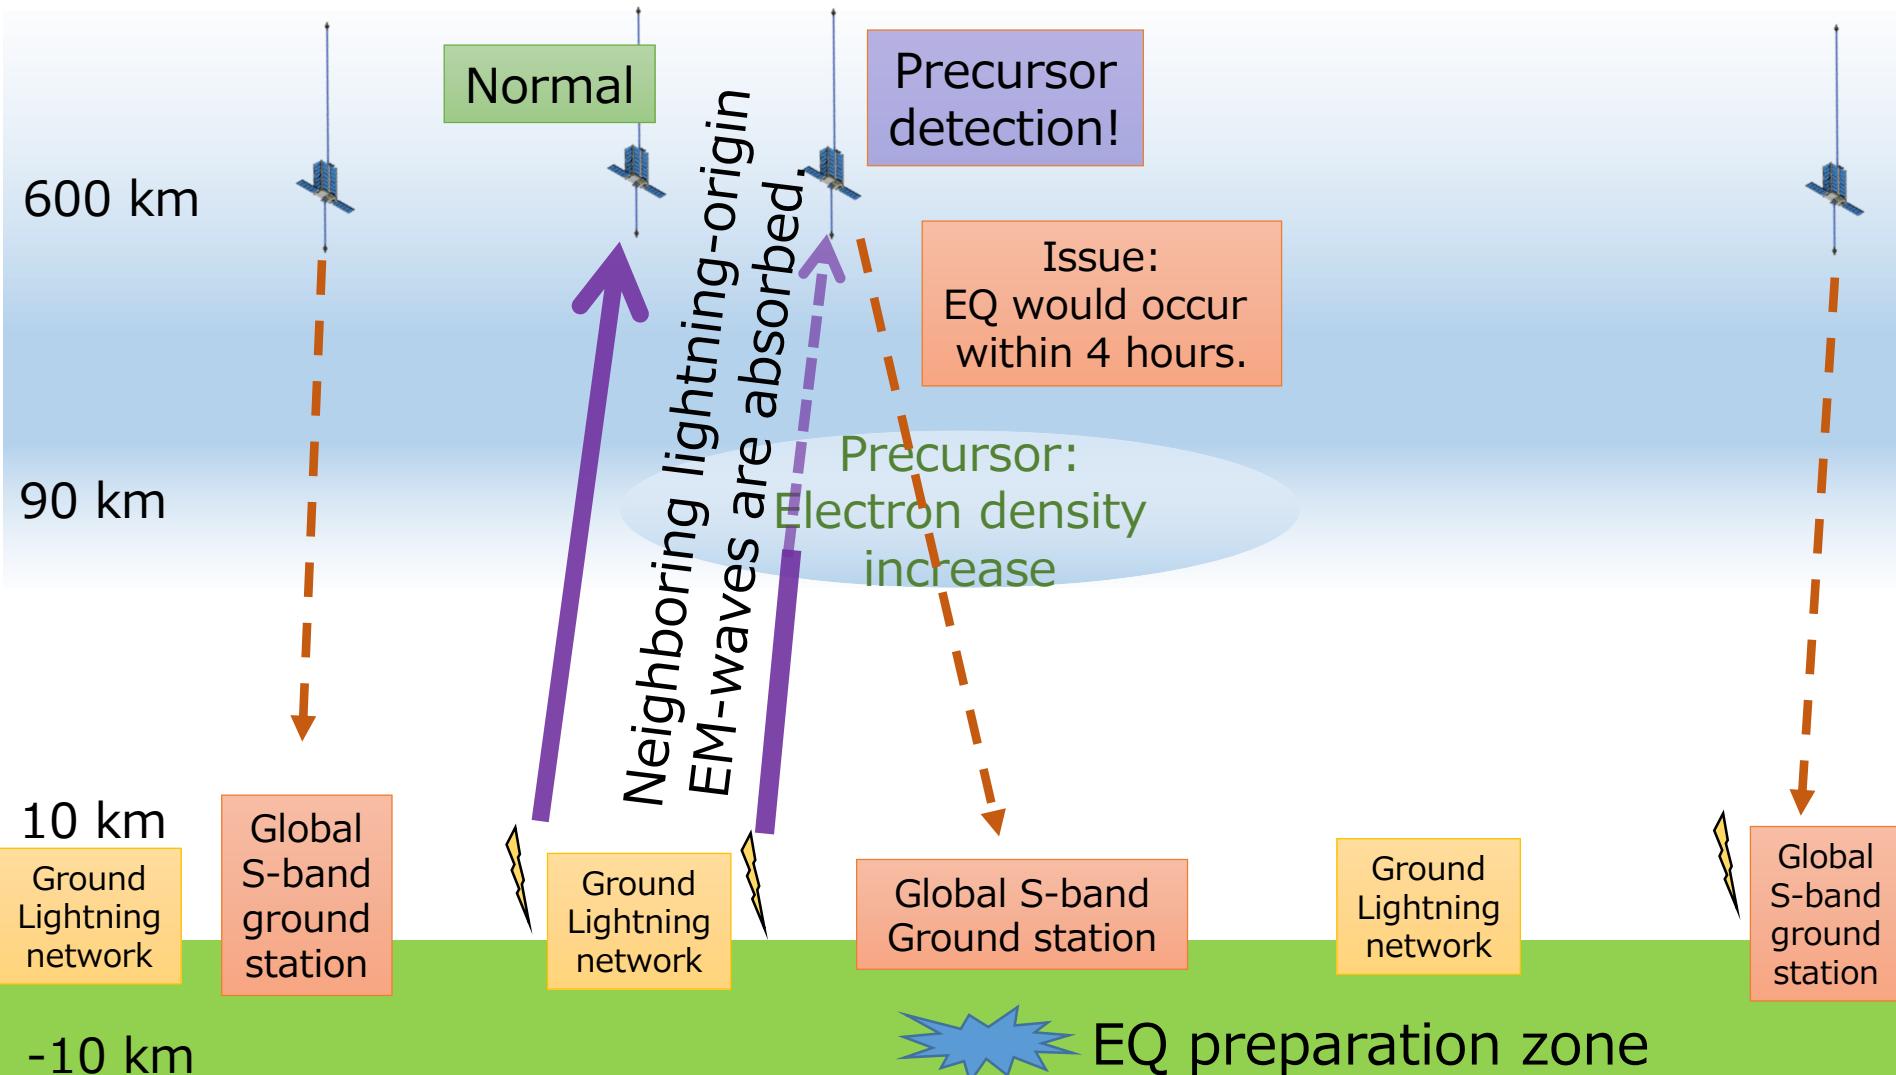

French DEMETER satellite (2004-2010) statistically found promising EQ precursor

Satellite precursor observation is useful for EQ prediction.

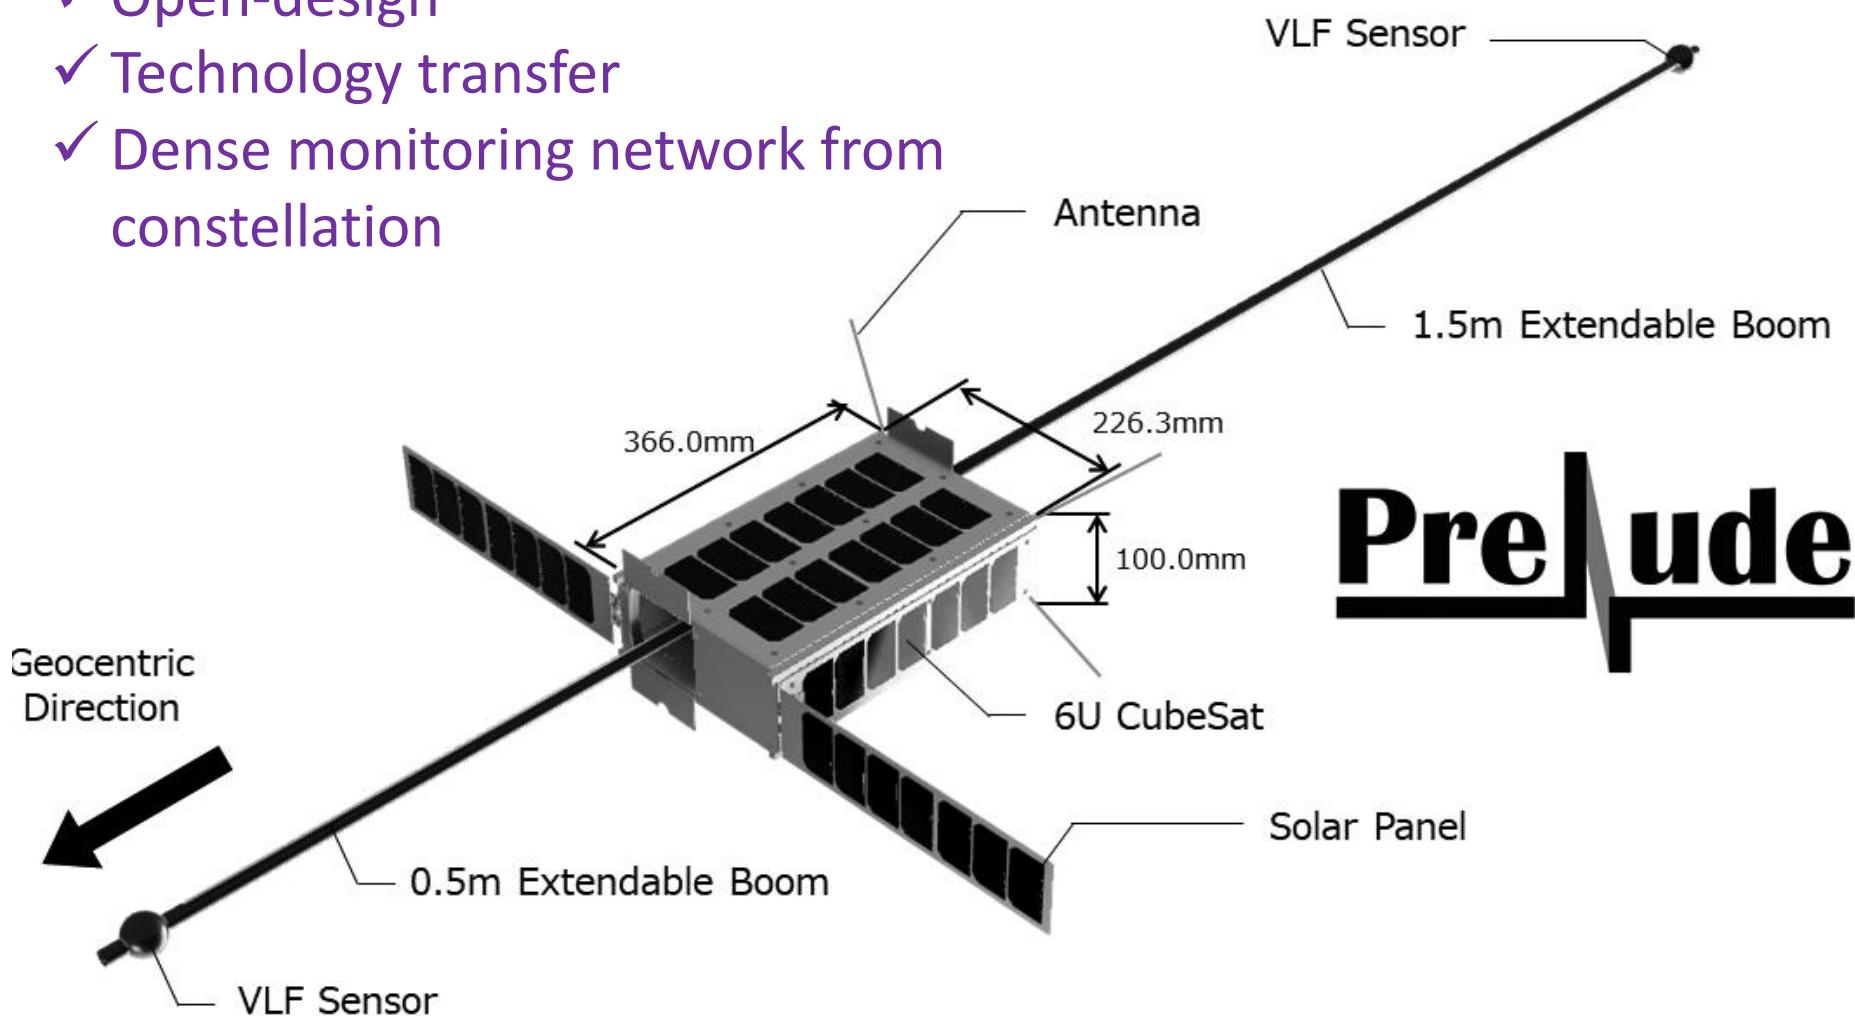

Methodology of EQ prediction from space

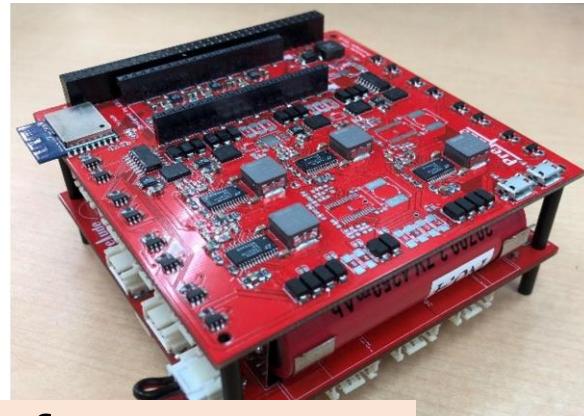

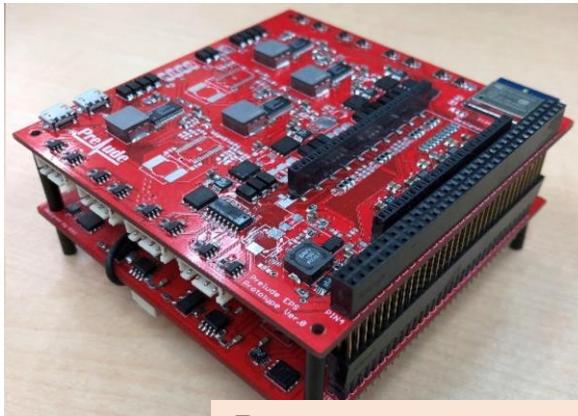

- ✓ **Lightning-origin EM waves** are used as a **natural radar** for precursor monitor.
- ✓ Dense global ground-stations provides **real-time** precursor monitoring.
- ✓ Satellite **constellation** supports globally-covered EQ monitoring.

PRELUDE: Precursory electric field observation CubeSat demonstrator

- ✓ CubeSat dedicated to EQ prediction
- ✓ Only matured technology
- ✓ Open-design
- ✓ Technology transfer
- ✓ Dense monitoring network from constellation
