Interference Reporting Form
Currently Used in Russia
Dr. Dmitry Aronov
Project manager

The Radio Frequency Service Subdivisions

7 Subdivisions of the Radio Frequency Service

Procedure of request for radio interference source detection (for entities which are not radio spectrum users)

Requests for radio interference source detection from individual or legal entities which are not radio spectrum users are received by radio frequency service in a written form (by mail, fax)

Request can be in any form and shall include the following:
- Applicant's personal information : Surname (for individual), Company's name (for legal entity), complete mail address, contact telephone numbers, full location of radio station exposed to interference impact;
- Frequency or TV channel where interference is detected;
- Interference impact result;
- Interference impact duration, its length and recurrence;
- Receiver type, receive antenna type.

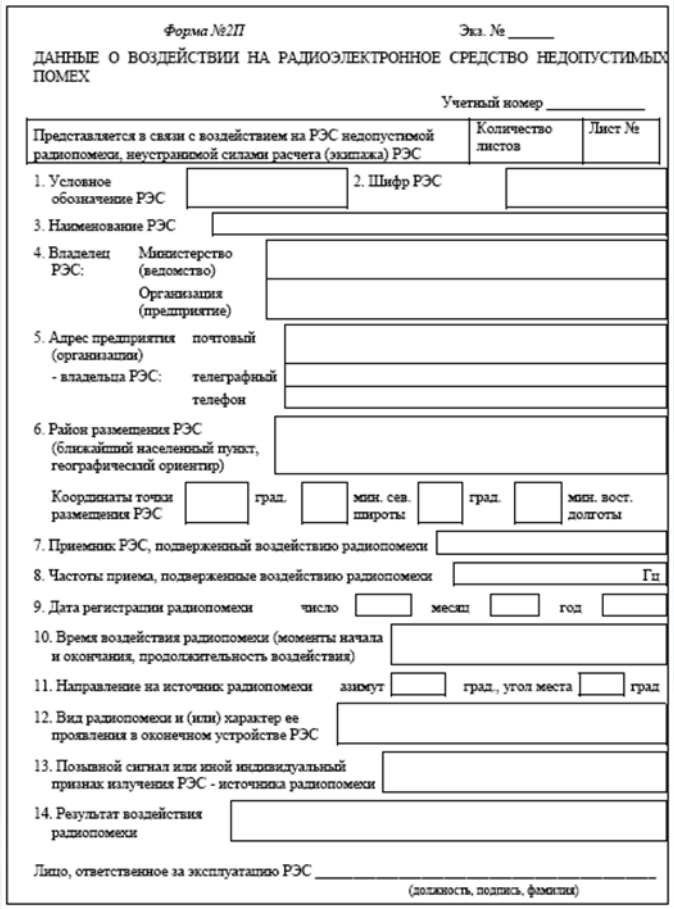
In case of radio station non-compliance with its operation conditions specified in the corresponding radio regulation agency permissions its operation can be limited and even permissions for radio frequency usage and operation of radio station as appropriate which had been previously issued can be abrogated.

Procedure of request for radio interference source detection (for radio spectrum users)

Requests from radio spectrum users are received by radio frequency service (by mail, by fax) in accordance with set form

Form is specified by “Provision on Uniform system of collecting and usage of information required to facilitate EMC of all radio services” approved by GCRF dated 31 July 1989.

In case of radio station non-compliance with its operation conditions specified in the corresponding radio regulation agency permissions its operation can be limited and even permissions for radio frequency usage and operation of radio station as appropriate which had been previously issued can be abrogated.



Форма №2П Экз. № _____

ДАННЫЕ О ВОЗДЕЙСТВИИ НА РАДИОЭЛЕКТРОННОЕ СРЕДСТВО НЕДОПУСТИМЫХ ПОМЕХ

Учетный номер _____

Представляется в связи с воздействием на РЭС недопустимой радиопомехи, неустранимой силами расчета (экипажа) РЭС	Количество листов	Лист №

1. Условное обозначение РЭС
2. Шифр РЭС
3. Наименование РЭС
4. Владелец РЭС: Министерство (ведомство); Организация (предприятие)
5. Адрес предприятия (организации) - владельца РЭС: почтовый; телеграфный; телефон
6. Район размещения РЭС (ближайший населенный пункт, географический ориентир)

Координаты точки размещения РЭС ____ град. ____ мин. сев. широты ____ град. ____ мин. вост. долготы

7. Приемник РЭС, подверженный воздействию радиопомехи
8. Частоты приема, подверженные воздействию радиопомехи Гц
9. Дата регистрации радиопомехи число ____ месяц ____ год ____
10. Время воздействия радиопомехи (моменты начала и окончания, продолжительность воздействия)
11. Направление на источник радиопомехи азимут ____ град., угол места ____ град
12. Вид радиопомехи и (или) характер ее проявления в оконечном устройстве РЭС
13. Позывной сигнал или иной индивидуальный признак излучения РЭС - источника радиопомехи
14. Результат воздействия радиопомехи

Лицо, ответственное за эксплуатацию РЭС _____
(должность, подпись, фамилия)

Request form for radio interference source detection (for radio spectrum users)

1. Name of radio station
2. Operator (Company), address
3. Location of radio station (the nearest city, geographical point)
4. Coordinates of radio station location
5. Radio station receiver exposed to radio interference impact
6. Received frequencies exposed to radio interference impact, (Hz)
7. Date of radio interference recording (date, month, year)
8. Time of radio interference impact (the starting point and the end, duration of impact)
9. Direction to radio interference source (azimuth, degree; elevation angle, degree)
10. Radio interference type and (or) its effect on the radio station
11. Call sign or any other individual emission feature of radio interference source
12. Result of radio interference impact

Conclusion

WG-A is invited to consider the form with data concerning unacceptable radio interference impact on radio stations while developing form for Report on interference caused to Global Navigation Satellite System.

Thank you for attention!
