

Challenges Posed by Large Constellations

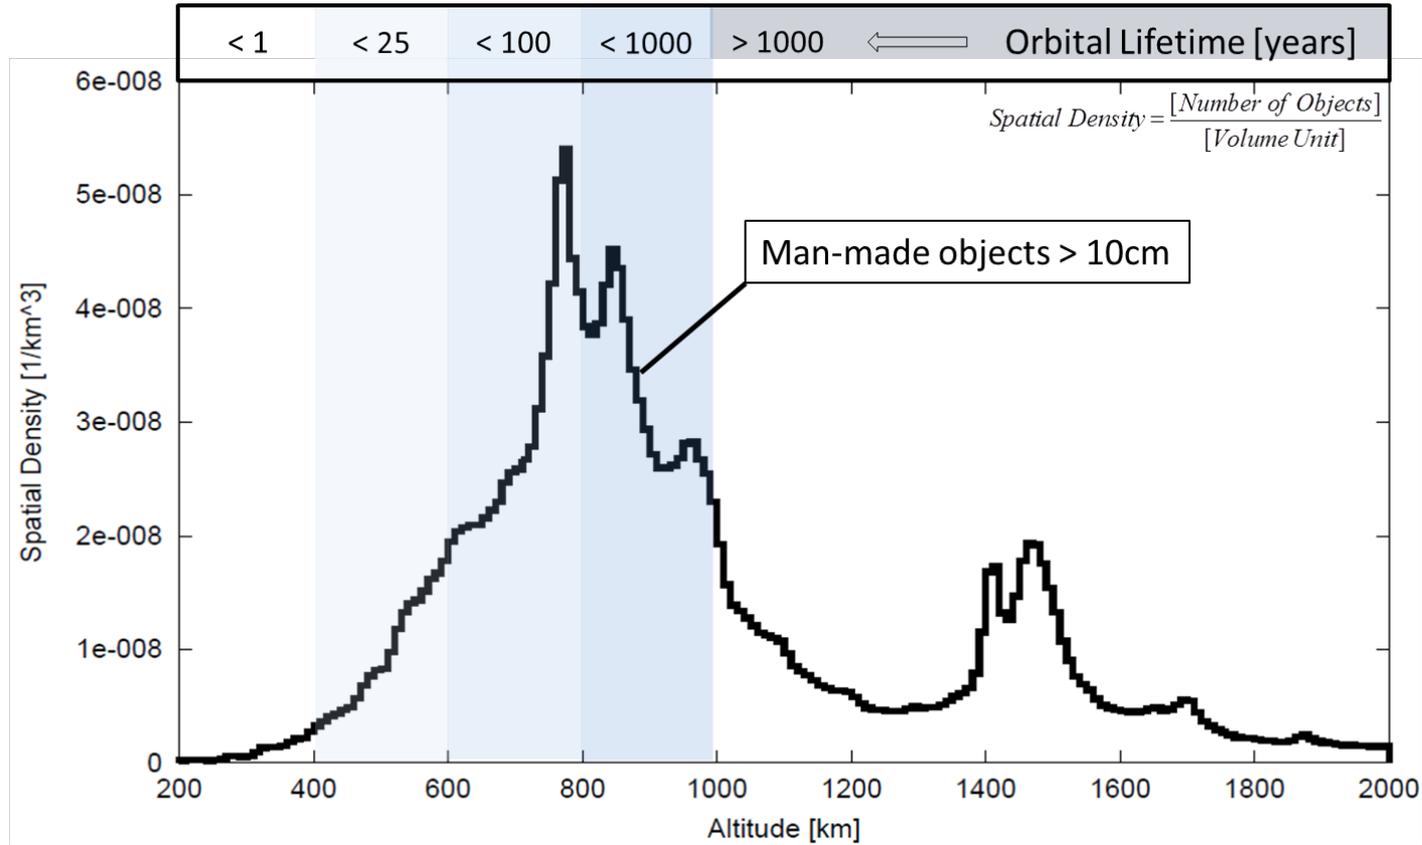

Holger Krag, Head of ESA's Space Debris Office

11/06/2019

Mega Constellations (> 10,000 LEO satellites)

Constellation	OneWeb	BOEING	SPACEX	SAMSUNG
Satellites	882	2960	7518	4600
Altitude	1200 km	1200 km	350 km	1400 km
Mass	150kg	> 100kg	390kg	< 200kg

Spatial Density

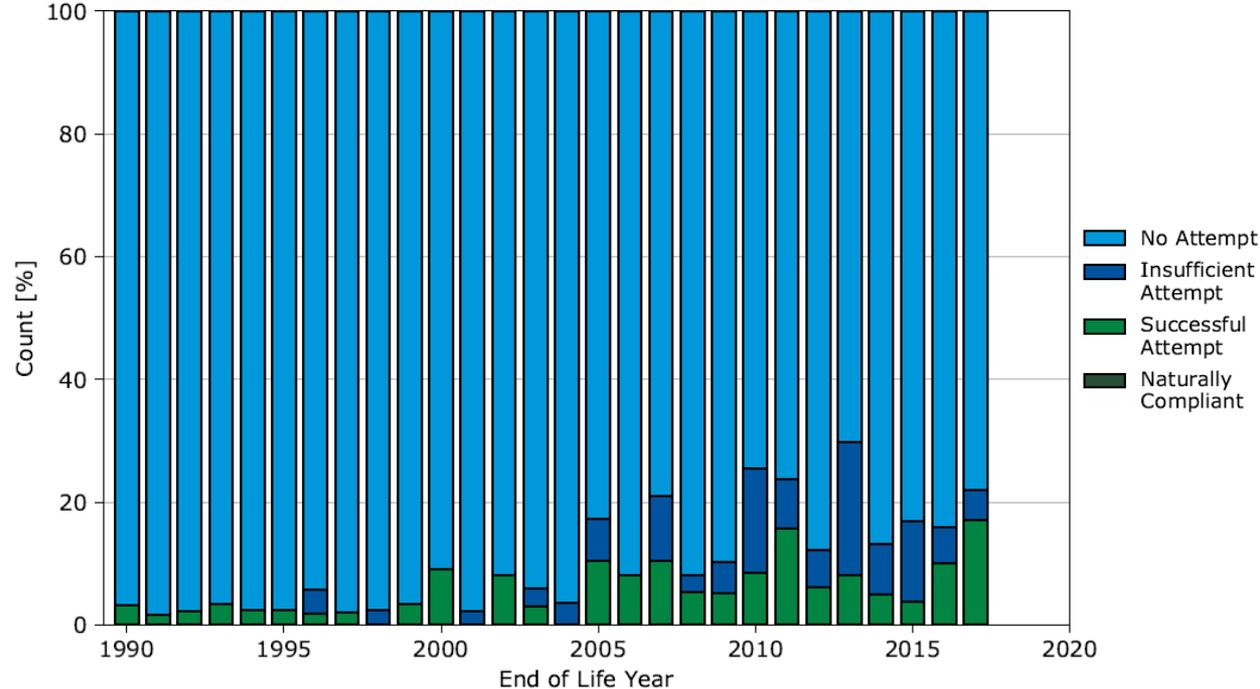

- Public Report on the global level of adherence to international Space Debris Mitigation Guidelines

- Generated from Surveillance Data

Statistics on the success-rate of Post Mission Disposal Manoeuvres

(Preliminary results)

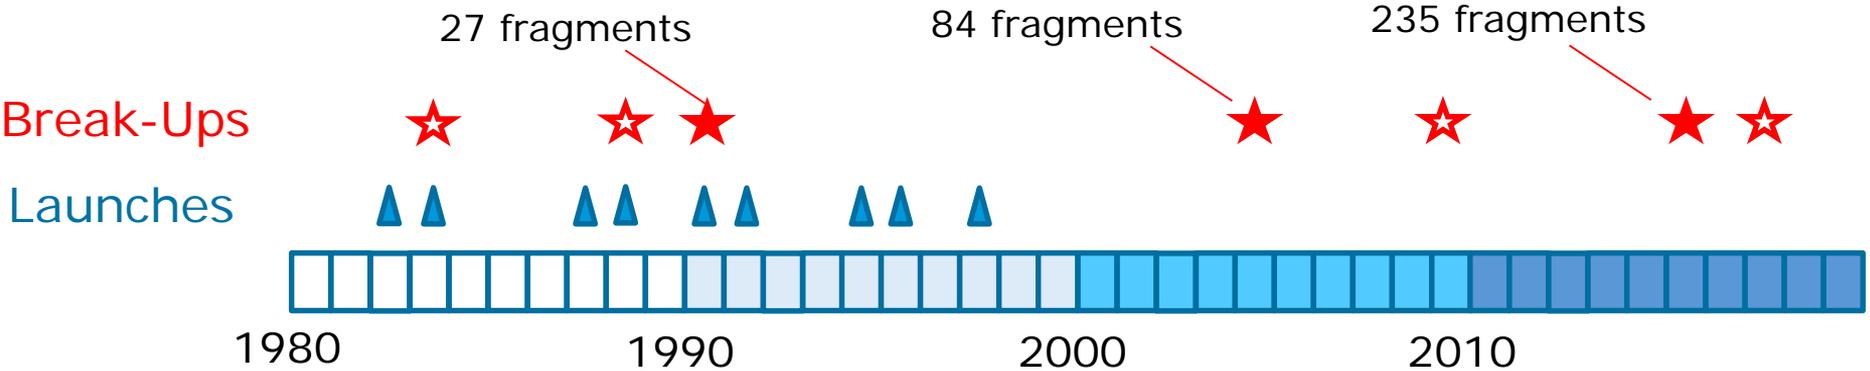

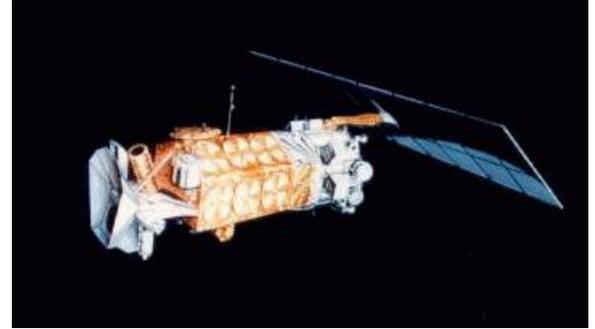

Environmental Effects of a Large Constellation

2076.35, 107388.

Late Effect of Design Flaws

- DMSP (Defence Meteorological Satellite Programme)
- Series 5D-2 (9 spacecraft, 7 broken-up)
- Battery fault

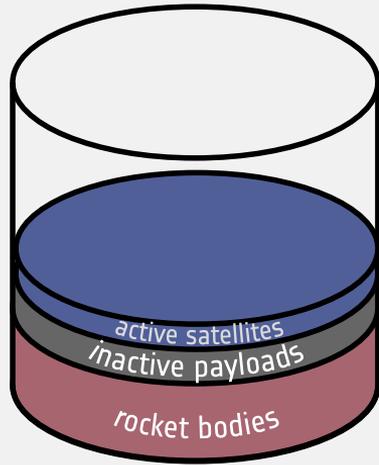

Impact on Astronomical Observations

- AAS Position Statement

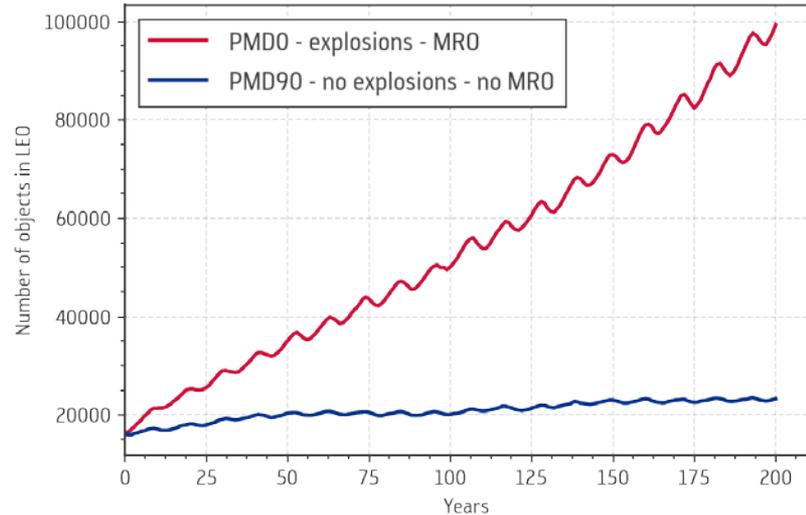

Space as a shared resource

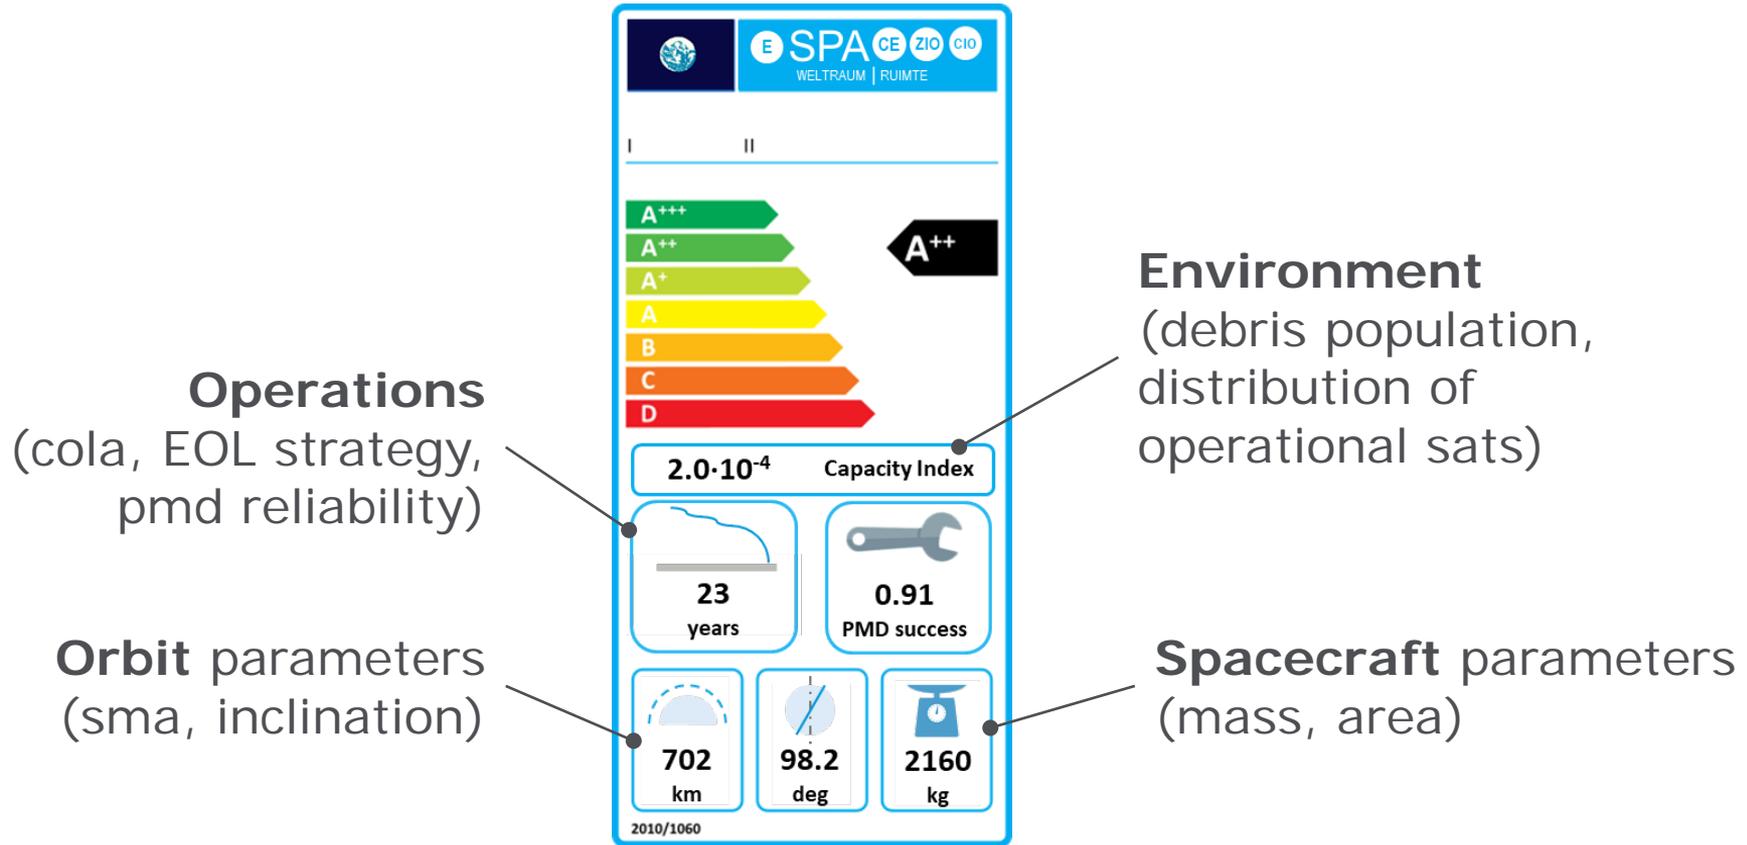

Capacity: typology & orbital regimes of artificial space objects compatible with a **stable evolution** of the environment

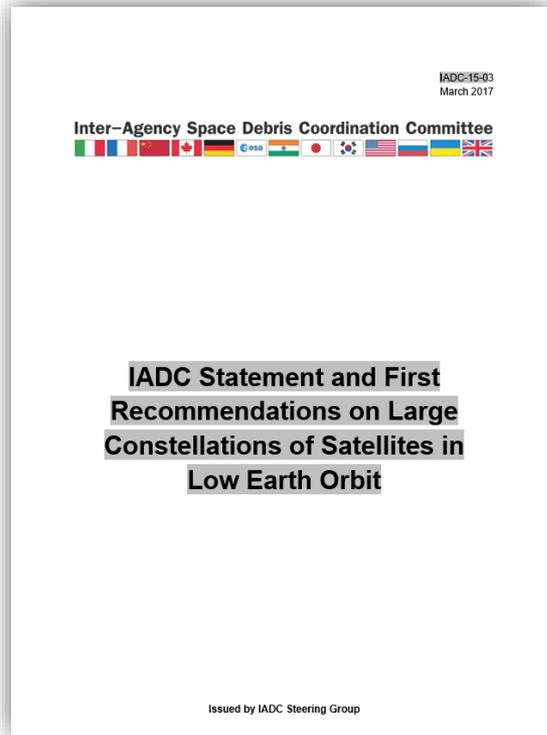

► Krag et al., 1st ICSSA, 2017

Impact of a mission on the space environment

Existing Work on Large Constellations

Development of technologies to prevent the creation of future debris

Altitude [Km] :

European Space Agency

Automated Collision Avoidance
