National time scale UTC(SU) and GLONASS system time scale: current status and perspectives

A. Goncharov, I. Norets, A. Tiuliakov, I. Silvestrov, P. Bogdanov

ICG- 2015, November 4  2015
Content

• Progress at the State Time and Frequency Standard of Russia
• New level of the National Time Scale UTC(SU) transfer
• The results of BIPM GNSS receivers absolute calibration in VNIIFTRI
• Directions of development for UTC(SU) time scale generating
  and transfer to GLONASS
• Summary
Legal basis for calculation and transferring of the National Time Scale UTC(SU)

**Federal Law "On the calculation of time" № 107-FZ of 04.03.2011**

National Time Scale of the Russian Federation - an ordered sequence of numbers of units of time, reproduced and stored by the State Service of Time, Frequency and Earth's Orientation Parameters on the basis of the State primary standard of time, frequency, and the National Time Scale.

**Interface control document GLONASS ICD 05.01, March 2008**

Reference time scale for the GLONASS system is the national coordinated time scale UTC(SU).

**Government Decree № 323 of 30.04.2008**

Federal Agency for Technical Regulation and Metrology carries out support for GLONASS reference values of time and frequency, the National Time Scale and the Earth's Orientation Parameters data.
Progress at the State Time and Frequency Standard of Russia

TA(SU) calculated on the basis of the frequency difference measurements of Cs Fountain vs H-Masers

UTC(SU) calculated on the basis of TA(SU) and steering for providing UTC - UTC(SU) ≤ 7 ns

1 pps UTC(SU) generated in real-time

UTC - UTC(k)

UTC(USNO) UTC(SU)

ns

1/1 31/1 2/3 1/4 2/5 1/6 1/7 31/7 31/8 30/9

2015

UTC - UTC(k)

BIPM CI 281

uB < 0.5 ns

CsFO2 included in calculations TAI
uB < 5 E-16

8 H-Maser CH1-75A used for keeping TA(SU)
σy (1 day) < 5 E-16

TWSTFT link VNIIFTRI / PTB:
uA 0.5 ns uB 1.1 ns

VNIIFTRI
National Time and Frequency Standard

CsFO2 characteristics

Circular T 333 BIPM

Frequency stability CsFO2 @ HM 3818 SU

\[ \sigma_y(1 \text{ day}) \approx 1 \times 10^{-15} \]
National Time and Frequency Standard

frequency stability HM CH-75A

Frequency stability HM CH-75A $\sigma_y(1\ day) \leq 5,0 \cdot 10^{-16}$
UTC(SU) time scale generating and transferring in GLONASS

\[ \tau_c = \text{UTC(SU)} - T_{\text{GLONASS}} \]

Time Transfer Link:
- GNSS
- TWSTFT
18.08.2014 the values of offsets [UTC(SU) - GLONASS TIME], broadcast by GLONASS satellites, were updated. The difference in the estimates offsets of the GLONASS time published by BIPM and measured in VNIIFTRI is about 200 ns.
UTC(SU) transferring by the means of GLONASS

Now the error of broadcast corrections for GLONASS Time – UTC(SU) offset does not exceed 10 ns (rms).
The Agreement on absolute calibration receiver TTS-4 BIPM

Agreement on calibration
M- 917
« 28 » 07 2014

The International Bureau of Weights and Measures (BIPM), an intergovernmental organisation, the headquarters of which are located Pavillon de Breteuil, 92312 Sèvres Cedex, FRANCE, represented by Director, Dr Martin Milton (hereinafter “the BIPM”),

and

Federal State Unitary Enterprise "Russian Metrological Institute of Technical Physics and Radio Engineering" (the FSUE VNIIFTRI), the headquarters of which are located MLB, urban settlement Mendeleeevo, Solnechnogorsk district, Moscow region, 141570, RUSSIA, represented by General Director Sergey Donchenko, (hereinafter “the FSUE VNIIFTRI”), acting in accordance with the company rules. The Parties, noting the existence of the Arrangement on the Mutual Recognition of national measurement standards and of calibration and measurement certificates issued by national metrology institutes (CIPM MRA), the fact that the FGUP VNIIFTRI is a participant in the Key Comparisons and the necessity to calibrate regularly time links used for these purposes,

have concluded this Agreement as follows:

1. Subject of the Agreement
The BIPM accepted the FSUE VNIIFTRI offer to carry out free of charge absolute calibration complete set of TTS-4 receiver (hereinafter the Receiver). The FSUE VNIIFTRI agrees to undertake all procedures to calibrate the Receiver and to issue a calibration Certificate. The FSUE VNIIFTRI will use the receiver for mutual time link calibration which results will released by the BIPM in the BIPM report.
The results of absolute calibration of BIPM GLONASS/GPS receivers TTS-4 in VNIIFTRI

We hope that upon completion of the BIPM receiver TTS-4 calibration GLONASS Time estimation of BIPM will be equal to VNIIFTRI estimation.
Directions of development for UTC(SU) time scale generating and transferring in GLONASS

- National time scale UTC(SU) system of the generation and storage modernization

- Creation of time and frequency standard based on the Rb-fountain

- Development of optical frequency standards on 87 Sr

- Development of high-precision comparisons system of national time scale with GLONASS time

- Investigation of transferring time and frequency signals over a fiber optic link
Creation of time and frequency standard based on the rubidium fountain

Laser Optical System

Atomic spectroscopy

Planning frequency stability  \( \text{RbFO } \sigma_y(\tau) \leq 2 \times 10^{-16} \) in 2016
Development of optical frequency standards on 87 Sr

The experimental setup

System of secondary cooling

Experimental prototype: planning $uB \leq 1 \times 10^{-16}$ in 2016
We upgrade SLR stations to ensure the time transfer. This will be used for time scales comparison and supporting the GLONASS Time. Planning $uB \leq 100$ ps in 2017.
Investigation of transferring time and frequency signals channels over a fiber optic link

47.5 km $uA \leq 10$ ps

95 km $uA \leq 10$ ps
Main target characteristics of UTC(SU) and GLONASS time scales matching

GLONASS Program for 2012 – 2020
Summary

• UTC(SU) realization is corresponding to requirements of CCTF;
• as a result of GLONASS time correction new level of UTC(SU) transferring was achieved;
• calibration problem of GLONASS receivers for transferring the national time scale UTC(SU) was resolved;
• directions of development for UTC(SU) time scale generating and transferring in GLONASS are presented.
Thank you for attention
