Introduction to National Spectrum Agencies and National Applications
Purpose

• The International Telecommunications Union (ITU) regulates spectrum at the international level
  – Treaty Based Process

• At the national level, the spectrum is managed by each nation’s own management office

• The purpose of this presentation is to share a few examples of national spectrum management organizations and illustrate differences in allocation and protection with respect to the ITU
National Spectrum Agency

• National Spectrum Agencies are working to provide an environment in which anyone can safely use radio waves with peace of mind.

• National Spectrum Agencies play an important role, which is to improve/maintain the safety and reliability of radio-communication networks, by such as:
  - Maintaining national laws/regulations/guidelines
  - Managing radio licenses
  - Maintaining radio monitoring systems to counter illegal/unlicensed radio emissions
EU National Spectrum Agencies

- In the EU there is no overall agency responsible for spectrum across the EU
- EU Member States manage their own spectrum individually
- but, there is extensive cooperation both within the EU and in the pan-European collection of regulators "CEPT"
- EU regulators such as ANFR, BNetzA, Ofcom, and Ficora are very active within the EU and CEPT to coordinate European positions for discussion at ITU level
- The Radio Regulations form the basis for spectrum management in Europe
In the US

- There are three categories of allocations
  - Government (Federal)
  - Non-government (includes state and local)
  - Shared

- Spectrum is usually separated and is managed by different agencies
  - Government (Federal) spectrum: National Telecommunications and Information Administration (NTIA)
  - Non-Government (includes state and local) allocations Federal Communications Commission (FCC)
  - NTIA and FCC coordinate actions for those bands that are “shared” as well as others
NTIA Organization

NTIA Manual
FCC Structure

FCC Rules
Code of Federal Regulations 47
Japan’s National Spectrum Agency

- Telecommunication Bureau of MIC (Ministry of Internal Affairs and Communications) is responsible for spectrum management in Japan.
- In Japan, the Radio Regulatory Laws consist of Radio Law, Cabinet Ordinances and Ministerial Ordinances (such as Enforcement Regulations and Regulations for Radio Equipment).
- For Reference;
International and National Allocations

• In general, the national frequency allocations and protections are aligned with the ITU table of frequency allocation and protection.

• However, they are not identical since each nation has sovereign rights to manage its own spectrum (as long as harmful interference into other countries’ radio services is not caused).

• Examples follow:
US RNSS Allocations

- The US and International RNSS allocation is identical in the 1164-1215 MHz and 1215-1240 MHz frequency band but there is no US RNSS allocation in the 1240-1300 MHz band
