

# Japanese Programs on Space and Water Applications

Tamotsu IGARASHI

Remote Sensing Technology Center of Japan

June 2006

COPUOS 2006

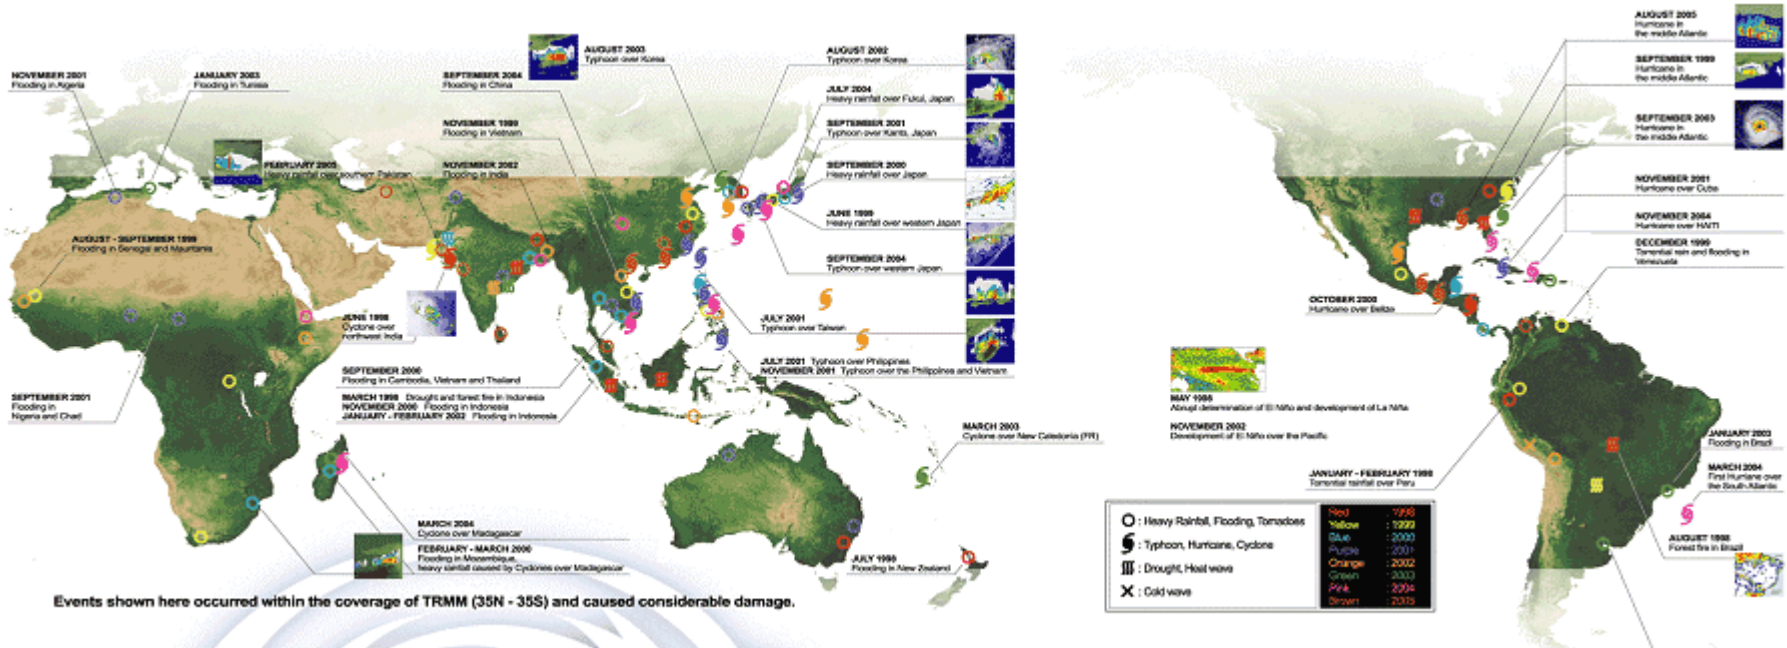

Vienna International Centre

# Water-related hazards/disasters may occur anywhere in the world

## Recent disasters, e.g.;

- Flash floods in Northern Thailand (May 2006);
- Landslide in Leyte Island, Philippines (Feb. 2006);
- and so on ...

Major meteorological disasters within the coverage of TRMM (35N-35S) during 1998-2005

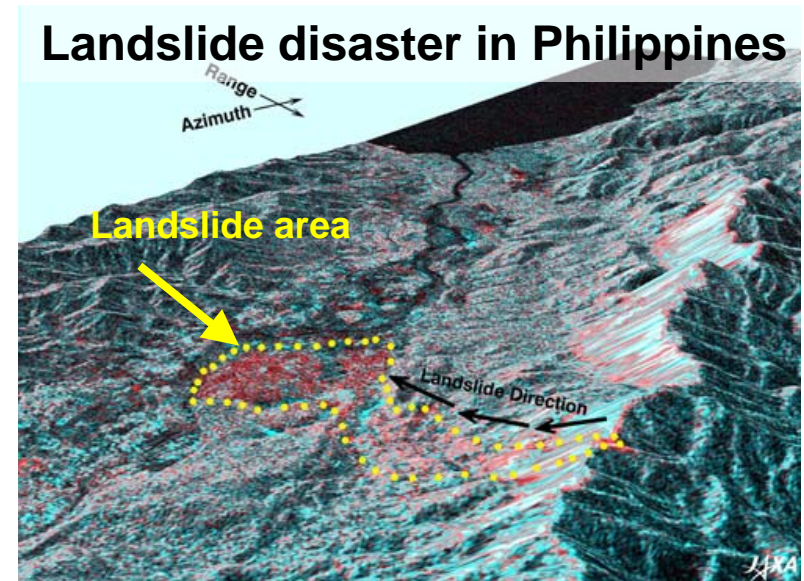

# Observation from space plays significant role for disaster management

Northern Thailand,  
observed by  
ALOS/PALSAR

Leyte Island, Philippines,  
observed by ALOS/PALSAR

Jau River, Amazon, Brazil,  
observed by JERS-1/SAR

# Advanced Land Observing Satellite (ALOS)

■ Launch: 24 January, 2006.

■ Objectives:

- Cartography
- Regional observation
- Disaster monitoring
- Resource surveying

Mt. Fuji observed by PRISM

**PALSAR(L-band SAR)**  
Cloud-free  
Day-night  
observation

# Water Cycle on the Earth

- Global water vapor transport observed jointly by AMSR (water vapor over ocean), GLI (water vapor over land), and SeaWinds (ocean wind vector), aboard ADEOS-II satellite.

# Tropical Rainfall Measuring Mission (TRMM)

- Japan-U.S. joint mission, flying since Nov. 1997
- World's first space-borne precipitation radar (PR) with microwave radiometer and visible-infrared sensor.
- Three-dimensional observation of rainfall by PR.

Hurricane KATRINA approaching South US, observed by TRMM at 0323Z 28 Aug. 2005.

# TRMM Tropical Cyclone Real-time Monitoring (North-western Pacific)

<http://www.eorc.jaxa.jp/TRMM/>

- Near real-time browse images of tropical cyclones (typhoons) for the North-western Pacific region, observed by TRMM is available.
- Database of past tropical cyclones for global region, observed by TRMM, AMSR and AMSR-E, are also available.

The screenshot shows the TRMM Tropical Cyclone Real-time Monitoring website. At the top, there's a header with the JAXA and NiCT logos and the text "Tropical Cyclones TRMM Real-Time Monitoring". Below the header, there's a "Top" link and a "日本語" link. The main content area is divided into several sections:

- Information:** Last up date : June 06, '06 1455Z. It includes a map of Asia with a red box indicating the monitoring area. Below the map, it states: "The TRMM real-time monitoring for tropical cyclones is now available. Monitoring area is an Asian region (0N-36N / 100E-180E)." There is also a "Last Two Months" section with a map of Asia and links to "Show All Typhoons" and "Show Active Typhoons".
- Links:** Includes "Tropical Cyclones Database" (You can access to online archive of images, movies and data of tropical cyclones observed by TRMM/Aqua/Midori-II satellites.) and "AMSR-E Typhoon Real-Time Monitoring" (Japanese version only.).
- Latest Image:** This section displays three images: "PR/VIRS Image", "TMI Image", and "Observation Area". The "Observation Area" image shows a map of the North-western Pacific with a yellow box indicating the area. To the right of these images, there's a section for "Asia T0601(CHANCHU)" with "Satellite Obs." data: Date/Time : May 18, '06, 2310Z; Lat/Lon : 23.0N-37.3N, 119.3E-132.6E. Below this, there's an "Info." section for May 18, '06, 2100Z: Pressure : 996 hPa; Winds : 20 m/s.

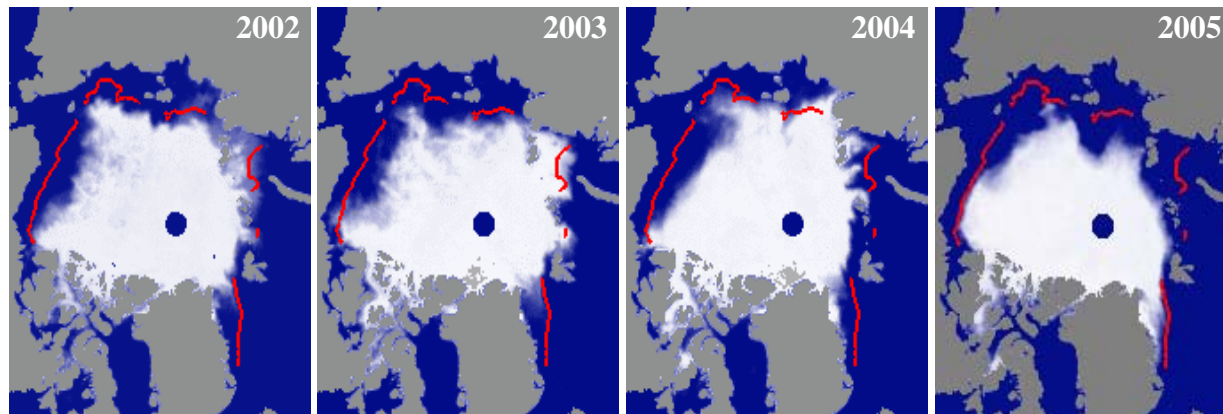

At the bottom of the page, it says: "Earth Observation Research Center, Japan Aerospace Exploration Agency JAXA EORC ALL RIGHTS RESERVED. EORC Typhoon Database Secretariat".

# Advanced Microwave Scanning Radiometer for EOS (AMSR-E)

- Observing various shapes of water over ocean (water vapor, precipitation, cloud water, SST, and sea ice) and land (soil moisture and snow water equivalence).
- Four-years of continuous data records have been archived from 2002.

## Sea ice monitoring by AMSR-E.

Yearly changes of monthly sea ice distribution over north polar regions in summer (red lines indicate average extent between 1988 and 2000, provided by NSIDC).

# Future mission: Global Precipitation Measurement (GPM)

## Core Satellite

**Dual-frequency Precipitation Radar and microwave radiometer**

- Observation of rainfall with more accurate and higher resolution
- Adjustment of data from constellation satellites

**JAXA (Japan)**

**Dual-frequency Precipitation Radar**

**NASA(US)**

Satellite bus, microwave radiometer

## Constellation Satellites

**Each carrying microwave radiometers, provided by international partners**

- More frequent Observation

**International Partners :**

**NOAA(US), NASA(US), JAXA (Japan), CNES/ISRO(France/India) and others**

**Global Observation  
every 3 hours**

# Future mission: Global Change Observation Mission (GCOM)

- Establish and demonstrate global and long-term Earth observation system for understanding climate variability and water-energy cycle.
- 2 satellites (**GCOM-W and C**) series of 3 generations with 1-year overlap will result in over 13 years homogeneous and steady observation. (**W: water and C: climate**)
- GCOM-W will focus on variability of **global water-energy cycle** and **extend successful AMSR-E observation** to contribute to world water relevant issues.

GCOM-W & -C characteristics (TBD)

	GCOM-W	GCOM-C
Design		
Orbit (TBD)	<ul style="list-style-type: none"> <li>■ Sun-synchronous</li> <li>■ Altitude: 699.6km</li> <li>■ Inclination: 98.19deg</li> <li>■ Asc. local time: 13:30</li> </ul>	<ul style="list-style-type: none"> <li>■ Sun-synchronous</li> <li>■ Altitude: 798km</li> <li>■ Inclination: 99.36deg</li> <li>■ Dsc. local time: 10:30</li> </ul>
Instruments	■ AMSR follow-on Microwave imager	■ SGLI Near-UV ~ TIR imager
Launch Date	JFY 2010	JFY 2011
Mission Life	5 years (×3 satellites; total 13 years)	
Launch Vehicle	H-IIA	

**AMSR follow-on of GCOM-W satellites**

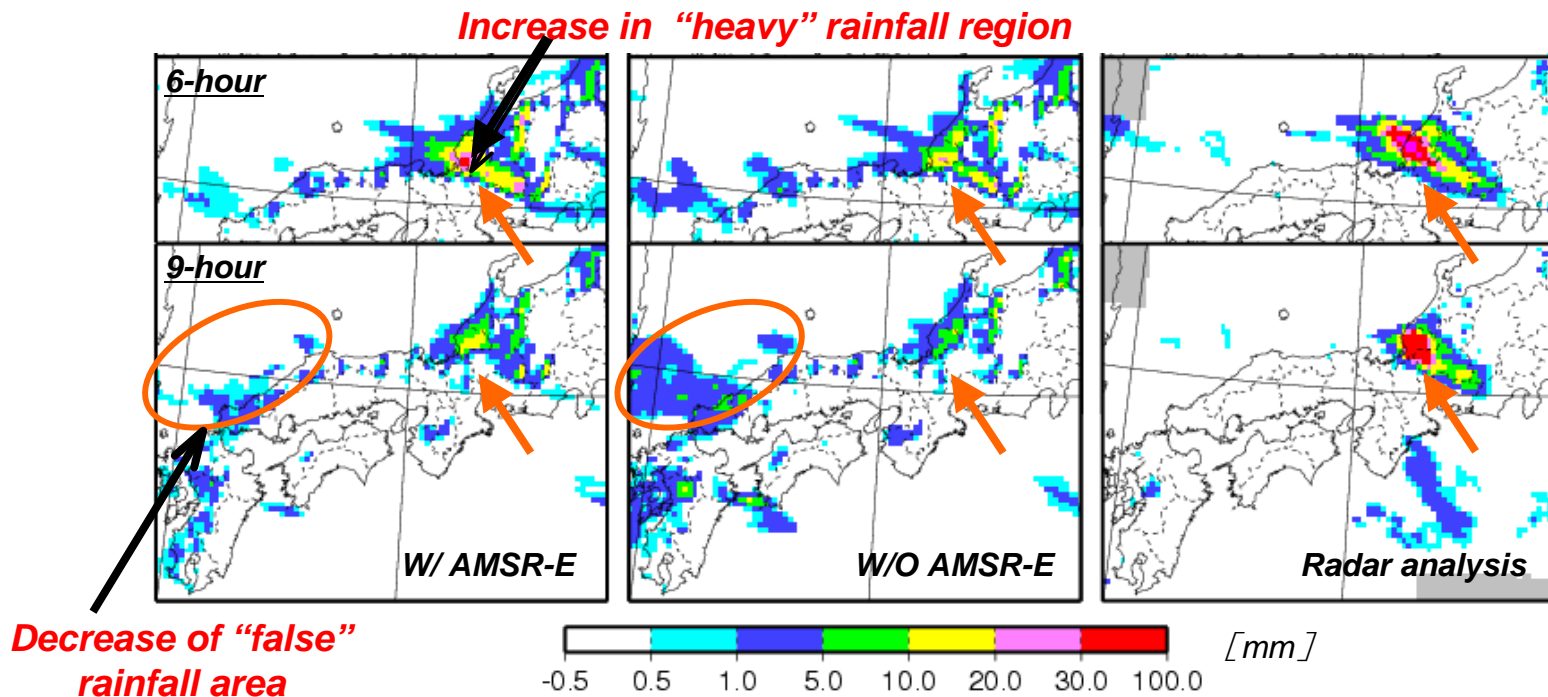

# Expected application (1): Numerical Weather Prediction

- Japan Meteorological Agency (JMA) started to use AMSR-E data for the meso-scale numerical weather prediction from November 2004, and for global model from May 2006.

## Data assimilation experiment for Fukui heavy rain in July 2004

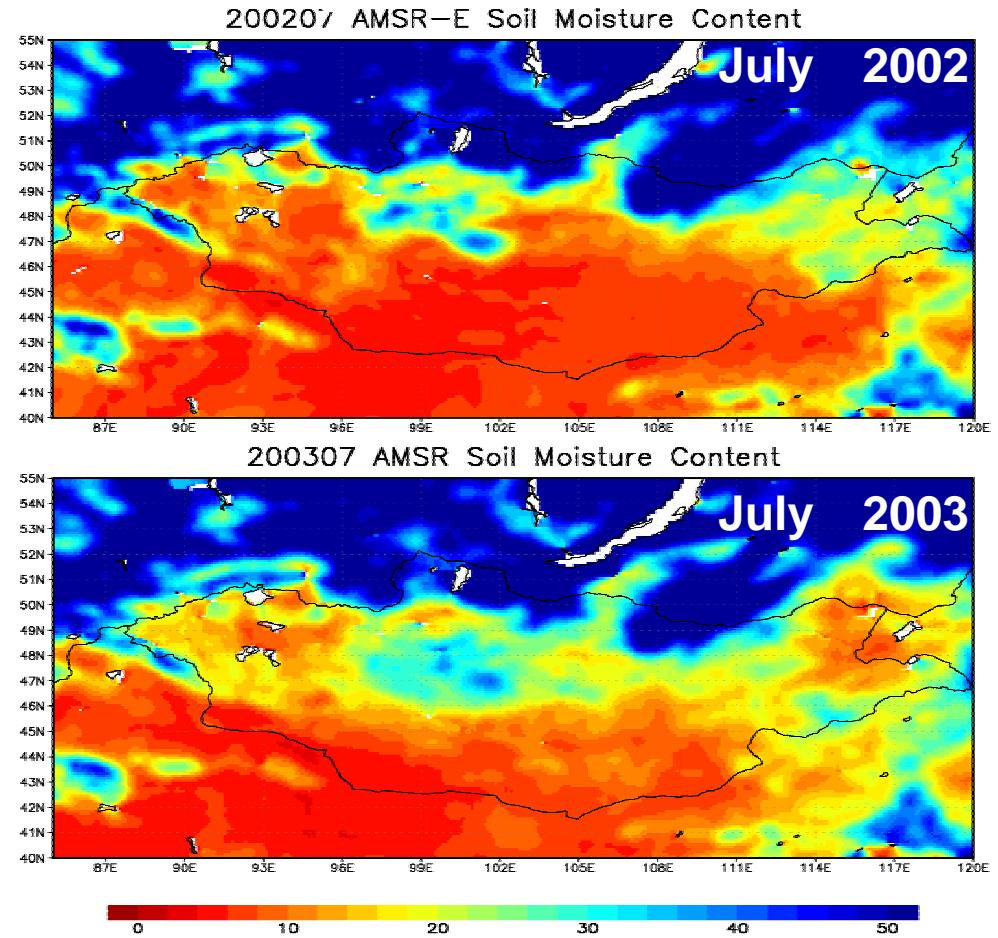

*All results were provided by Numerical Prediction Division, JMA*

## Expected application (2): Monitoring of soil moisture content

- Soil moisture is important in regional agricultural management and in regional/global climate.
- Because of its fine resolution, AMSR-E currently have the best capability for soil moisture monitoring.
- The wetter land surface condition in 2003 derived from AMSR/AMSR-E is consistent with that year's large amounts of winter snow and summer rain.

### Monthly average soil moisture maps of Mongolia

*This is a cooperative research project between JAXA,  
Unv. of Tokyo and Hiroshima Univ.*

# Scientific and societal significance of water-related satellite data

For example, global rain map may apply to ;

- **Climate change assessment**
  - Monitor variations in rainfall and rain areas associated with climate changes and global warming
- **Improvement in weather forecasts**
  - Data assimilation in numerical prediction systems
- **Flood prediction**
- **Water resource management**
  - River, dam, agricultural water, etc.
- **Other applications**
  - Agriculture, etc.

# Coordinated Enhanced Observing Period (CEOP) initiated by GEWEX an Element of WCRP

**CEOP HP : <http://www.ceop.net>**

## CEOP Objectives:

1. Water and Energy-Cycle Simulation and Prediction
2. Monsoon System Studies

## CEOP Strategy:

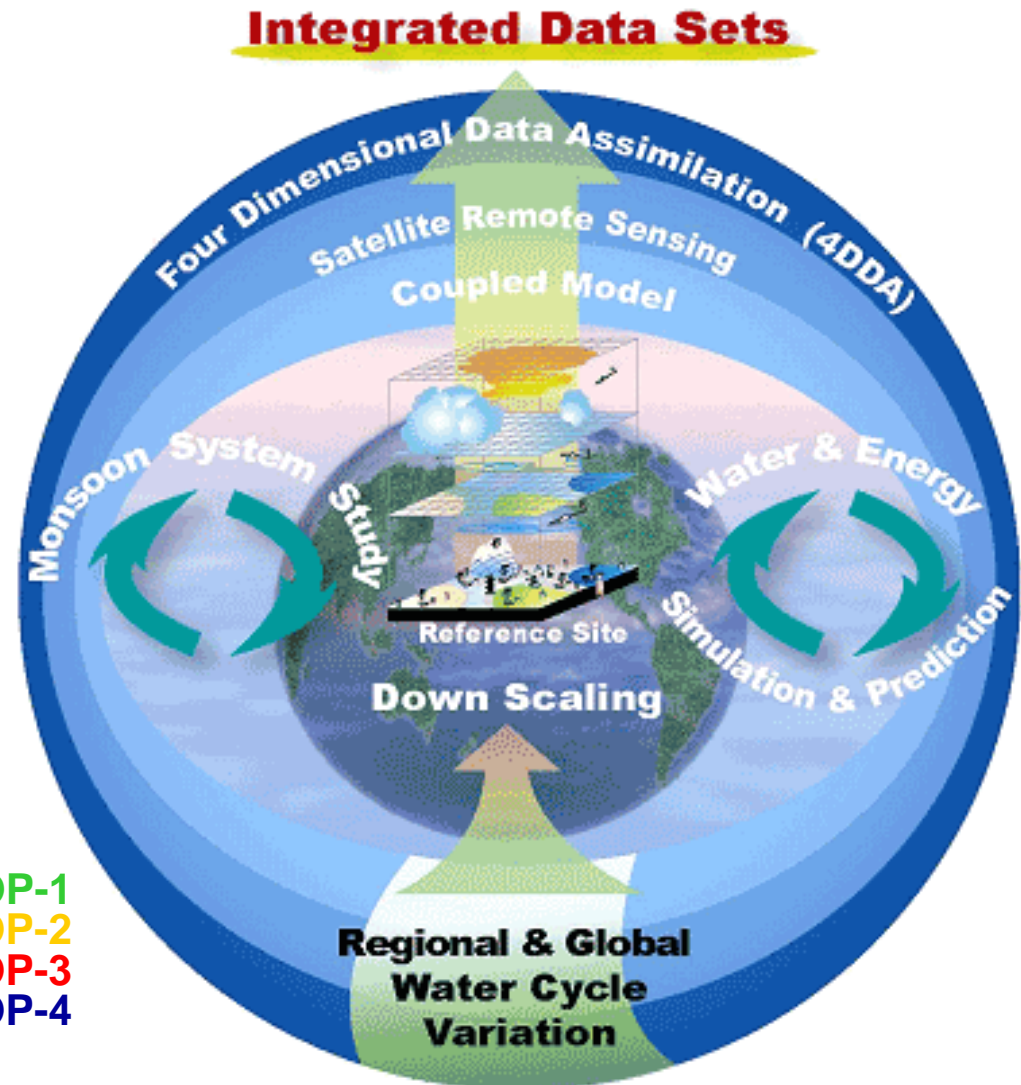

1. The first global integrated data sets of the water cycle with spatial consistency and climate variability, through
  - ( i ) the ground-based observations from the 36 CEOP reference sites
  - ( ii ) the satellite observations of the entire water cycle
  - ( iii ) the simulations of numerical models with physical consistency
2. Challenges to inter-connection of regional water cycles and Down-scaling applications to water resources

## CEOP Schedule:

**Data Collection: 2001-2004 / 2005-2007: Research**

**EOP-1**  
**EOP-2**  
**EOP-3**  
**EOP-4**

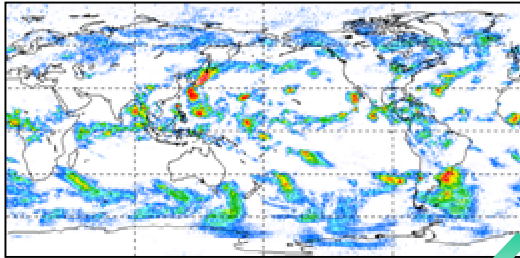

# Global Flood Alert System (GFAS)

GFAS will receive and utilize real-time 3-hourly global precipitation data obtained from GPM to disseminate flood information to the concerned countries.

**GPM**  
(Global Precipitation Measurement)

Raw Data

Precipitation Information around the Upstream

Ground Stations  
(NASA, JAXA)

On-Line

Data Processing System (NASA, JAXA)  
Real-time 3-hourly Precipitation Data

On-Line

International Flood Network

Estimation of  
precipitation probability

Present  
Precipitation  $>$  Estimated  
Precipitation  
Probability

E-mail

Disaster Prevention  
Organizations of  
the concerned countries

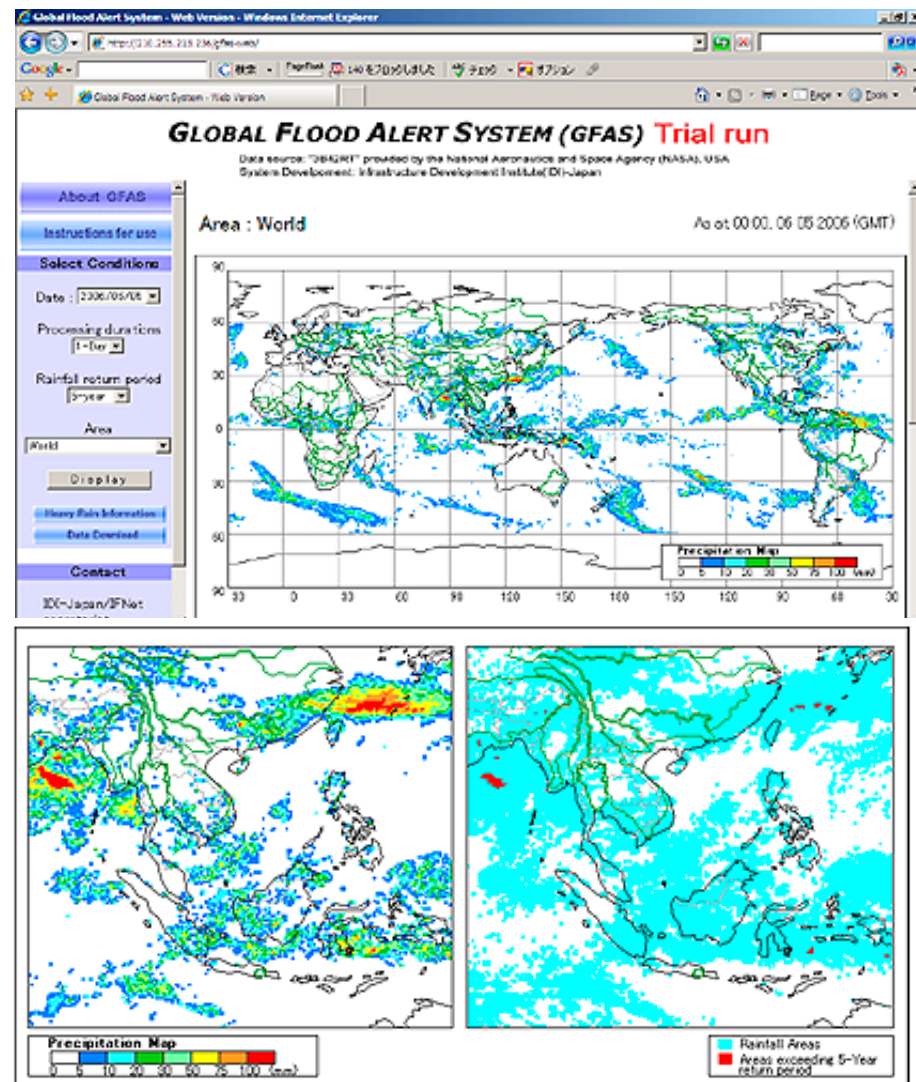

**Flood  
Alert !**

# GFAS trial run on IFNet's website

- The internet-based system is being developed by the Infrastructure Development Institute (IDI)-Japan
- The GFAS displays global/regional daily and 3-day rainfall maps, precipitation data in text form, and provides heavy rain information by precipitation probability estimates.
- Currently running on a trial basis at IFNet's website.

<http://gfas.internationalfloodnetwork.org/gfas-web/>

# Outline of International Centre for Water Hazard and Risk Management (ICHARM) under the auspices of UNESCO

UN WWDR II (2006)

- **Flood risk** analyses in diverse localities in developing countries
- Development of **flood warning systems** that use satellite observations and other advanced technology
- Development of **flood hazard** mapping procedures able to meet various environmental and social conditions
- Development of community water hazards risk aversion systems with advanced flood warning and flood hazard maps as available means
- Promotion of basic research on **hydrological measurement, analysis, and forecast** to support ICHARM activities
- Participation in international research programs such as **World Water Assessment Programme, International Flood Initiative, Group of Earth Observations and Predictions in Ungaged Basins**

## Research

Data

Results

Curriculum

Participation

Knowledge

Network

## Information networking

- Creation of a **worldwide and inter-disciplinary network** of practitioners, researchers and course graduates in the field of integrated water risk management
- **Collection, analysis and dissemination** of information and experiences regarding water-related disasters worldwide
- Timely organization of investigation teams when catastrophic water hazards occur
- Organizing and sponsoring **workshops and symposia**

Flood Hazard Mapping Training

## Training

- Training courses on **practical risk reduction systems** incorporating existing social diversities, for public officers and decision makers
- Human resources development for integrated flood risk management **in cooperation with universities and related institutes worldwide**
- Training courses of **flood hazard mapping and river and dam engineering** for researchers and engineers
- Providing follow-up activities for course graduates in their home countries

# Application to world-wide flood disaster mitigation (Cooperative Research at PWRI-ICHARM)

Satellite-derived precipitation

Globally available database:

- DEM,
- Land use, etc.

Runoff modeling & calculation

Probable inundated area

Joint researches at ICHARM to make flood forecasting information based on satellites:

- 1) *Improvement of real-time satellite product of rainfall <with JAXA>*
- 2) *Development of Integrated Flood Analysis System (IFAS) <with private sectors>*

The forecasting result obtained through the runoff calculation based on satellite-based rainfall and/or ground-based one could be used for flood warning in ungauged basins in developing countries.

Flood Control Management

Flood Warning System

Water Resources Management

# Capacity Building Workshop in Asia

organized by IGWCO and JAXA with support of AIT

- The Workshop will be held in 26-28 Sep. 2006, Bangkok, Thailand, to address the **uses and applications of Earth observations for sustainable water management**.
- The workshop aims to:
  - exchange information on **best practices for applications of Earth observations for water resource management** in Asia and other regions.
  - exchange information on **available data and tools** for applications of Earth observations for water resource management in Asia.
  - consolidate a statement of **regional requirements based upon existing needs** for Earth observations and capacity building activities for water resource management in Asia.
  - discuss and propose a **next step of the regional capacity building projects** for applications of Earth observations for water resource management in Asia.

**Workshop website: <http://www.a-a-r-s.org/ws-eowm/>**

## Conclusion

- The satellite observation is extremely effective to obtain not only water information on the Earth but also disaster damage information.
- Satellite information is also significant for scientific issues, such as extreme rainfall events, sea ice variations in polar regions, and variation of water cycle related to global change.
- End-to-end systems linked data providers and users are explored, such as IFNet/GFAS, ICHARM, etc., toward future operational systems.
