TRENDS AT THE GLOBAL LEVEL

TRENDS AT THE SUB REGIONAL LEVEL

WHAT'S NEXT?

FRA 2010

SUSTAIN AND EXPAND PARTNERSHIP

MEET GLOBAL INFORMATION NEEDS

FRA 2010: Global Remote Sensing Assessment of Forests

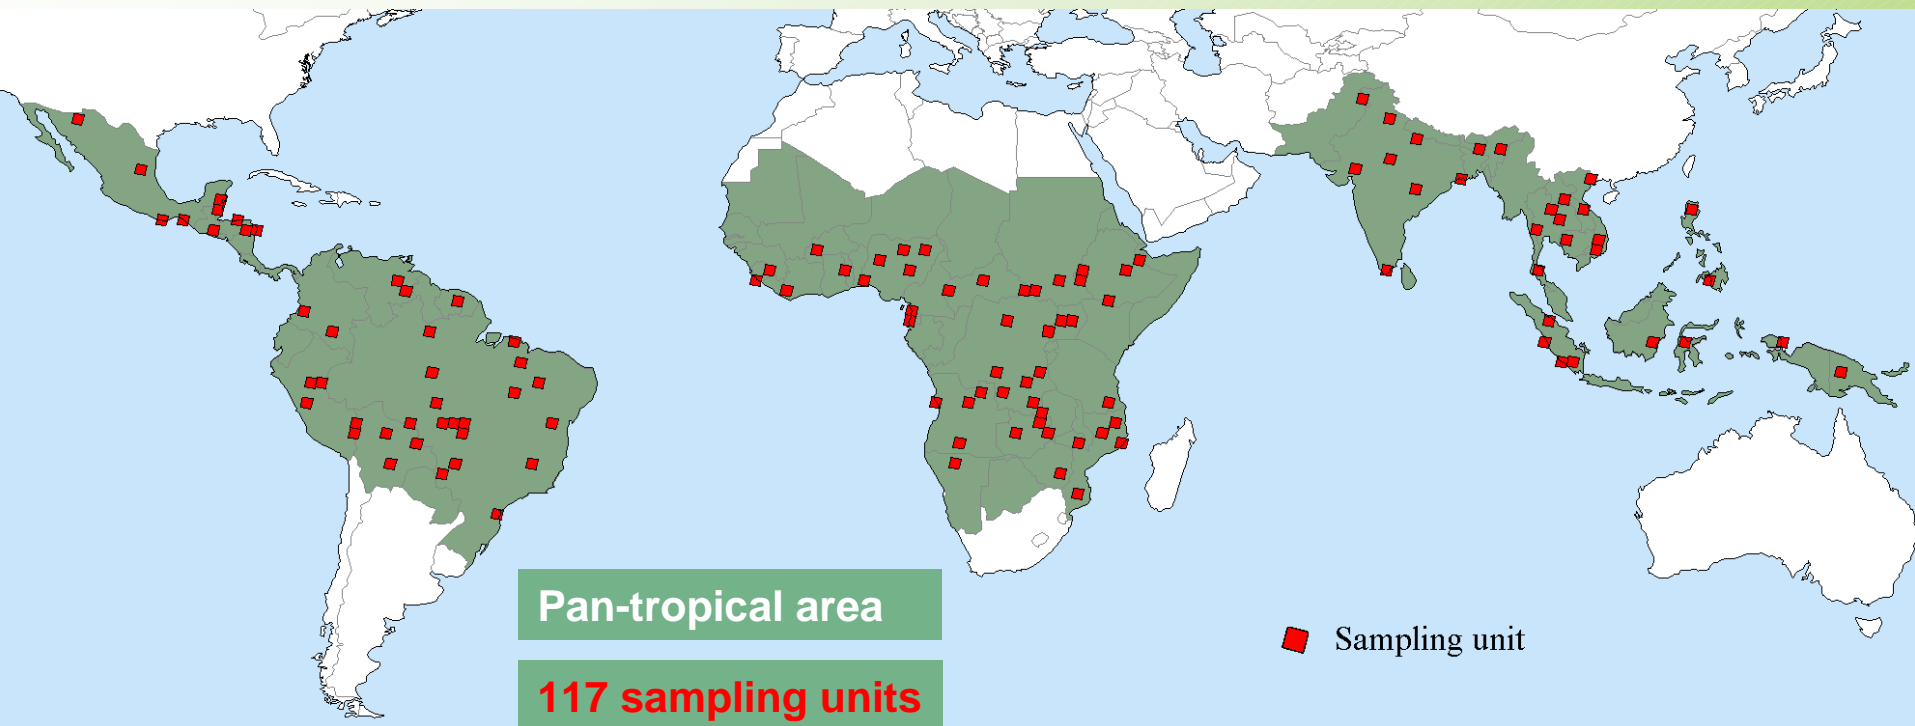

Rationale

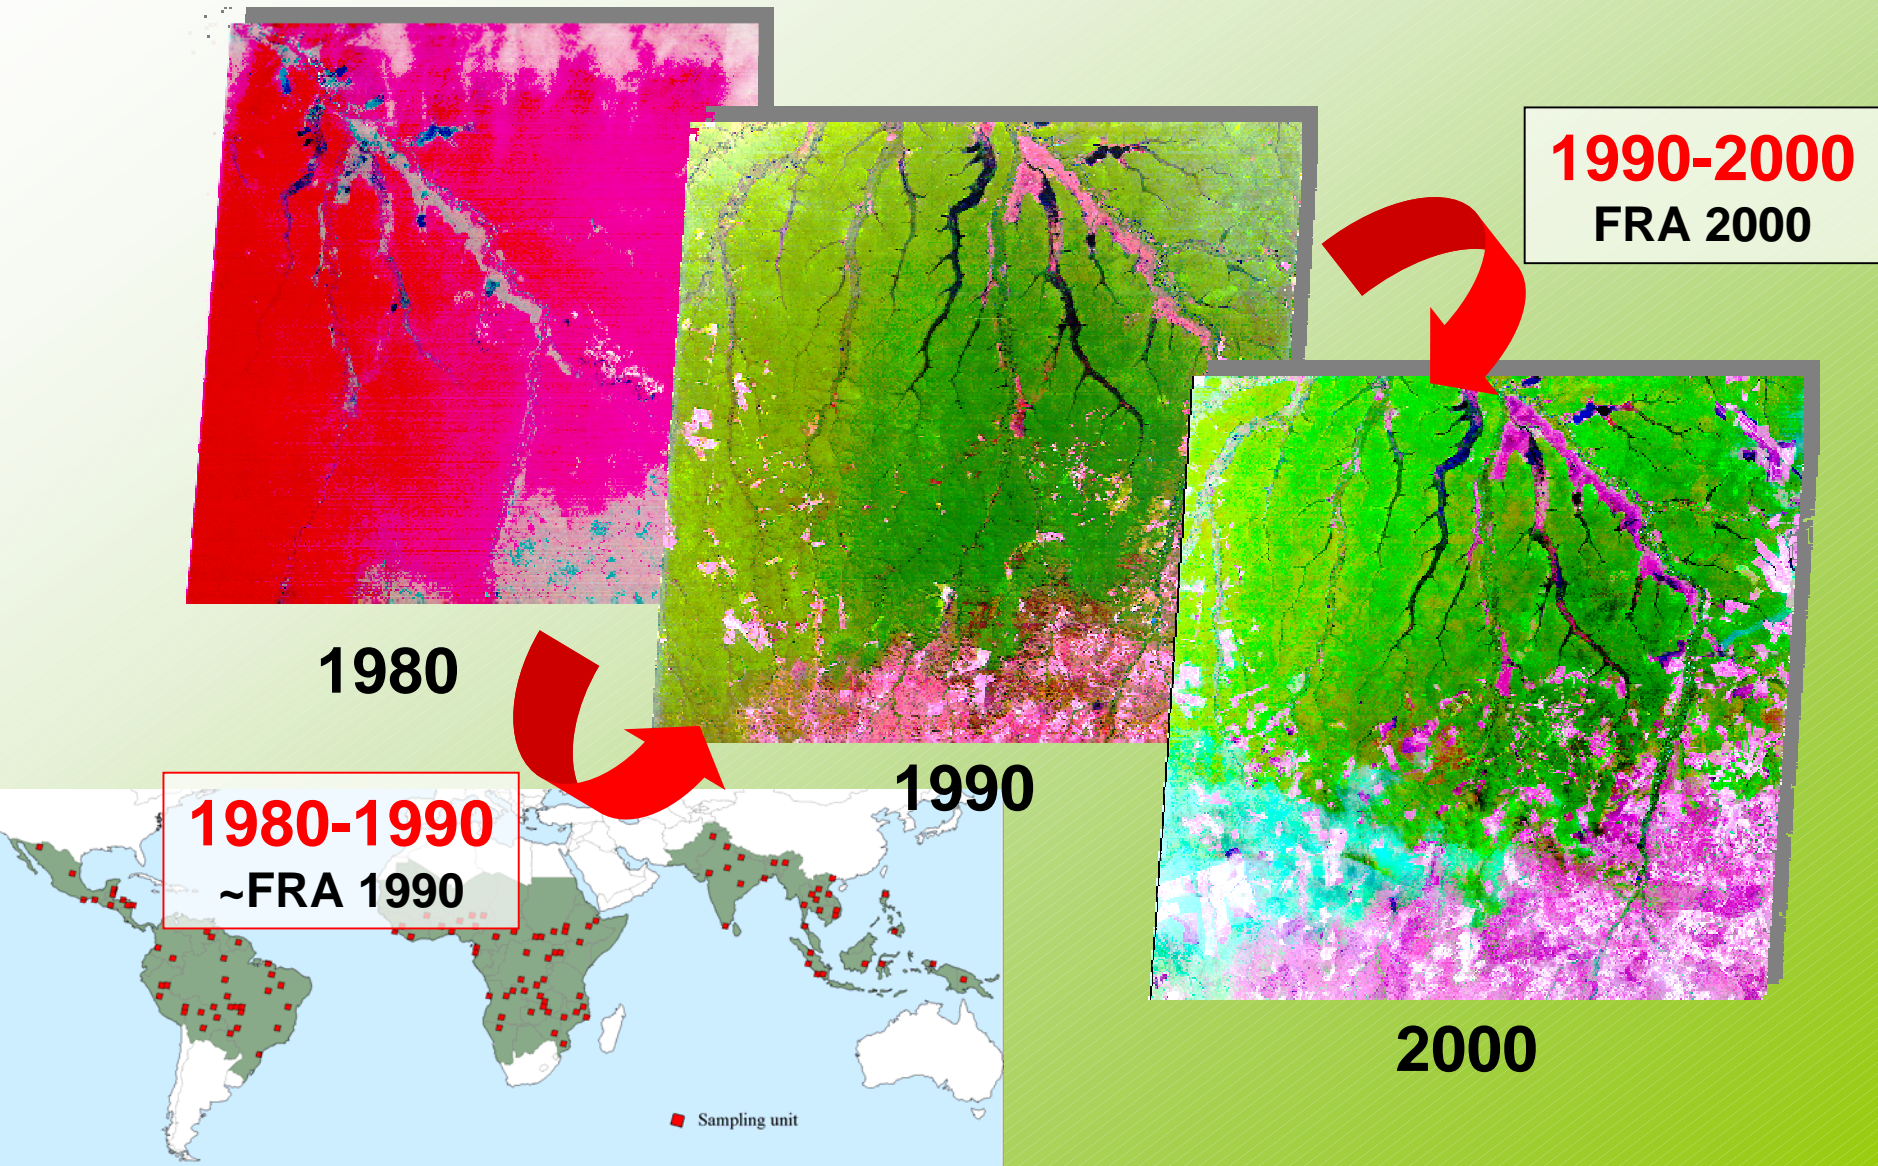

- Complementary to national reporting
- Independent monitoring system
- Land use change information
(degradation, deforestation and fragmentation)
- Consistent over time and space

FRA 1990 & FRA 2000: Pan-tropical Remote Sensing survey of Forest Cover changes 1980-1990-2000

- Covered all tropical forest in wet, moist and dry conditions
- Statistical population : LANDSAT frames with forest cover > 10 %
- Two-stage stratified random sampling - 10% intensity
- Valid at global and regional levels

FRA 1990 & FRA 2000: Pan-tropical Remote Sensing survey of Forest Cover changes 1980-1990-2000

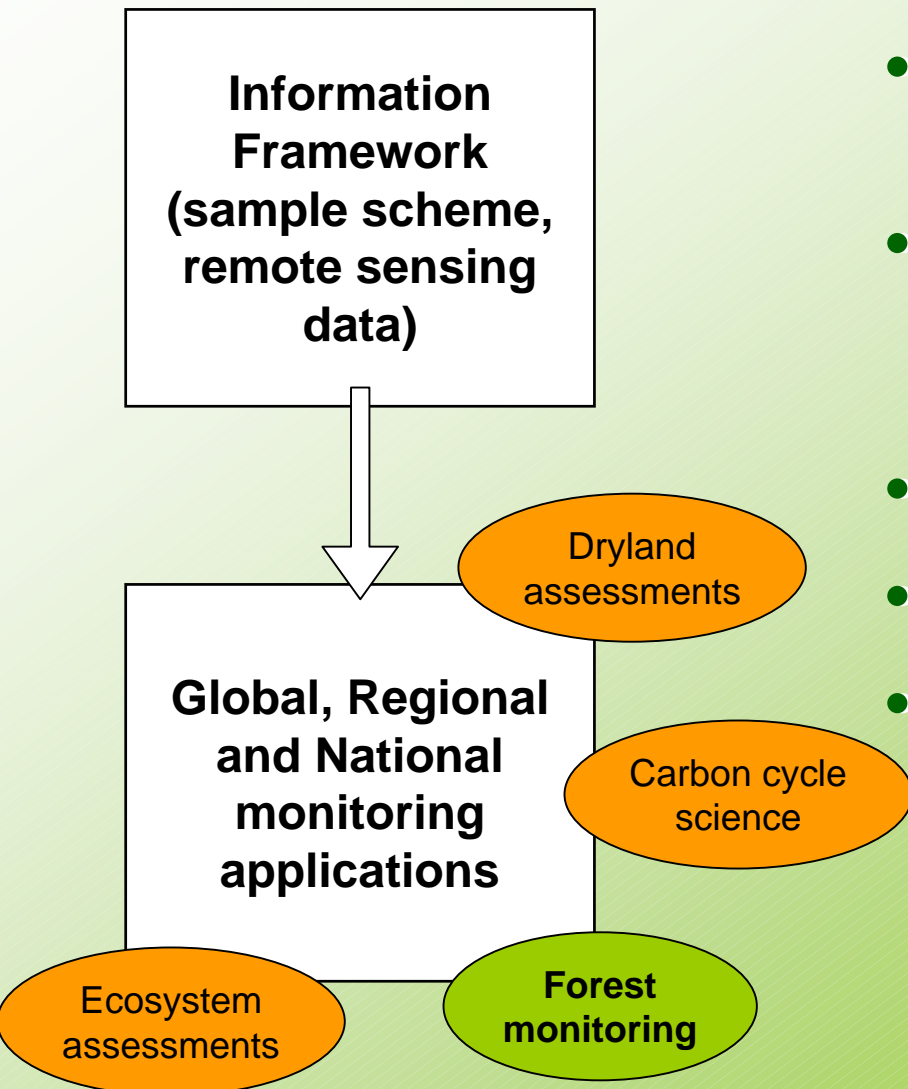

Possible improvements for FRA 2010

- Global
- Decentralized & increase in-country capacity
- Increased precision of statistics
- Add wall-to-wall forest mapping
- Set up an information framework in support of monitoring of forests, land use and the environment

FRA 2010:

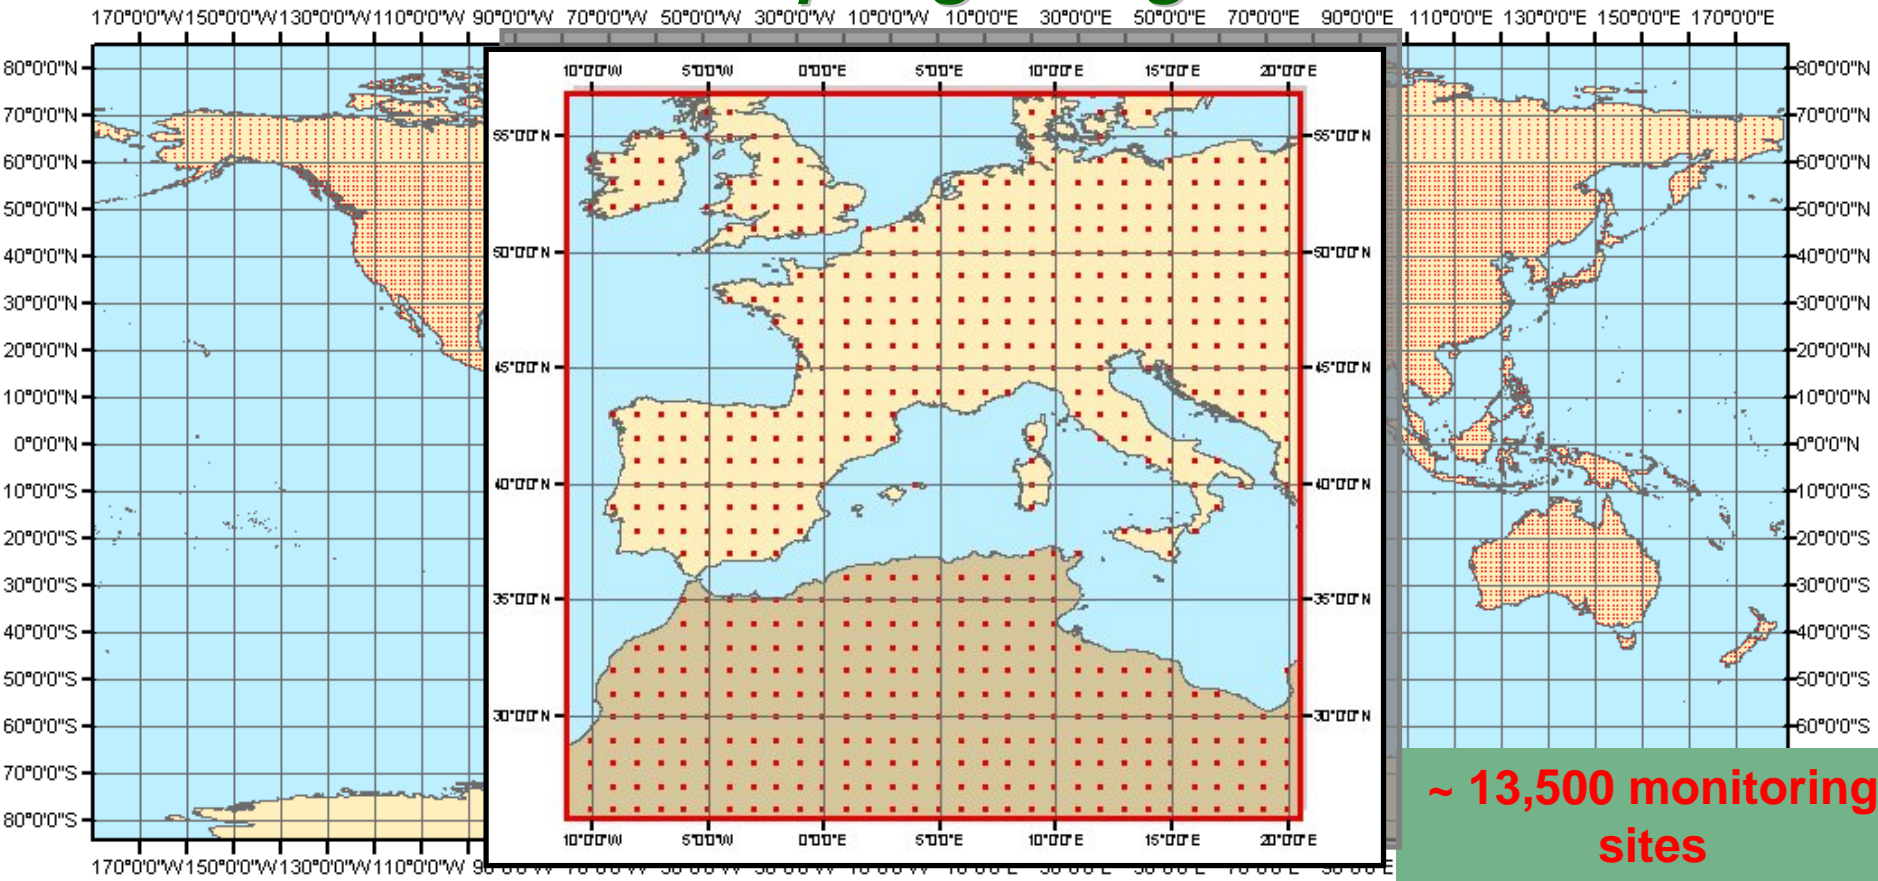

Information Framework for Global Monitoring of Forests, Land use and the Environment

- Links information from different sources, studies
- Scalable-aggregation (regional and global) or segregation (national and sub-national level)
- Serve multiple purposes
- Serve many user communities
- Reduce monitoring cost

FRA 2010: Information Framework

Sampling design

- Covers the whole land surface of the Earth (not only tropical)
- Systematic grid based sampling : a monitoring site at each latitude and longitude degree
- Sampling intensity reduced above a certain latitude (60 degrees)

FRA 2010: Information Framework

Sampling design

REGION	SU Nb
Africa	2,558
Asia	3,077
Europe	3,088
North and Central America	2,487
Oceania	778
South America	1,545
TOTAL (excl. Antarctica)	13,533

COUNTRY	SU Nb	% (of Land area)
Brazil	707	0.8%
Cameroon	38	0.8%
Guatemala	9	0.8%
Italy	35	1.2%
Philippines	32	1.0%
USA	977	1.2%

- Area covered at sample site: 10 km x 10 km
- Sampling intensity: about 1 % of land surface
- Plot density enough in some countries to produce national estimates
- Stratification may be applied to optimize efficiency
- Linked to NFA tracts at same site (1 km x 1 km)

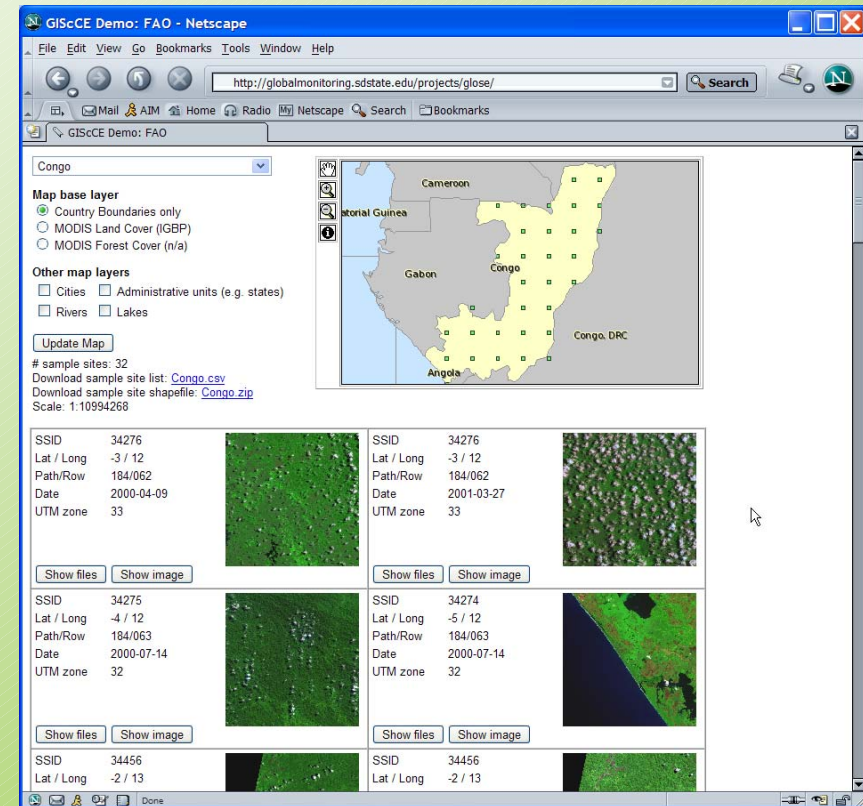

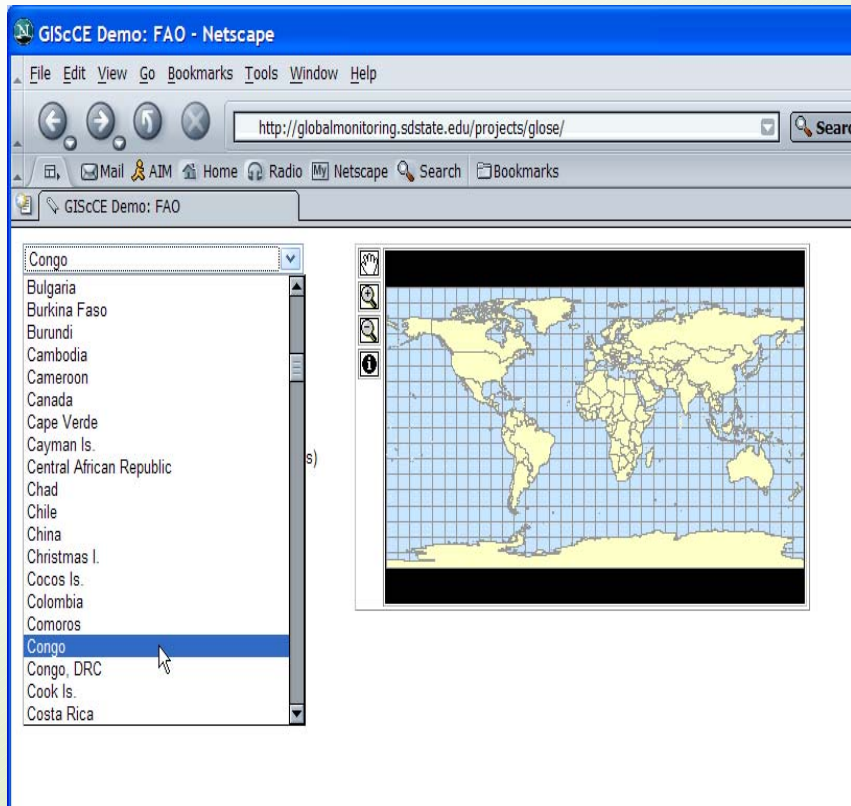

FRA 2010: Information Framework

Contents

- Remote sensing data : high-resolution and very-high resolution satellite data (Landsat, ...), aerial photos...
- Time- series (5-10 year intervals)
- Other data sets : medium or low-resolution satellite data (phenological information and digital elevation/terrain models)
- To ensure neutrality and longevity to the framework by locating the governance of the platform in the UN organizations like FAO and UNEP

FRA 2010: Information Framework Access

- Open and immediate access to the content (input data and results)
- Data distribution and input of standardized interpreted results: Internet interface (SDU)

FRA 2010: Application of IF to global monitoring of Forest

Changes 2000-2005

Time series of satellite
imagery
(from IF)
(1975)- 1990- 2000-2005

- Based on FRA 2000 experience
- Centralized pre-processing & website
- Decentralized interpretation
- Standardized methodology
- Homogeneous classification designed to allow a meaningful description of changes, with special attention to forests

FRA 2010: Global monitoring of Forest Full cover map

- Complements high resolution sampling
- Locate forest and changes
- MODIS vegetation continuous fields (% tree cover)

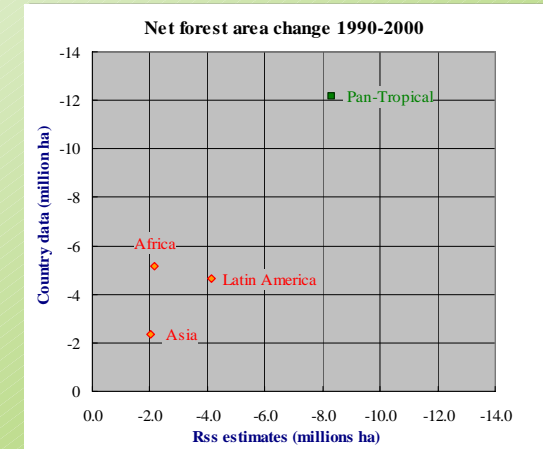

FRA 2010: Expected results and outputs

Regional, biome and global monitoring of forests 1975-1990-2000-2005

Area transition matrix 1990-2000
(million ha)

Land cover classes in 1990	Land cover classes in 2000									State 1990	% of total land area
	Closed canopy forest	Open canopy forest	Long fallow	Fragmented forest	Shrubs	Short fallow	Other land cover	Water	Plantations

Shrubs	0.1	0.1	ε	0.1	143.5	0.6	9.7	1.8	0.1	155.9	5.1
Short fallow	1.0	0.3	1.2	1.5	0.2	122.7	11.6	0.2	0.4	139.0	4.5
Other land cover	0.6	0.5	0.5	2.3	3.7	4.9	928.4	1.3	2.3	944.4	30.8
Water	0.2	ε	ε	ε	0.8	ε	1.2	5.6	ε	7.8	0.3
Plantations	ε	ε	ε	ε	ε	ε	1.1	ε	18.0	19.3	0.6
State 2000 →	1 135.2	290.0	71.5	222.5	150.6	147.3	1 017.6	10.2	23.2	3 068	
% of total land area →	37.0	9.5	2.3	7.3	4.9	4.8	33.2	0.3	0.8		

Transition matrices

Calibration/validation of country data at regional and global levels

Forest/ land use changes estimates

Information on land use dynamics
Forest Maps
Country capacity building
Fragmentation and other indicators

Collaboration

- Countries: national agencies, regional hubs
- FAO FORM & SDRN
- UNEP
- USGS/EROS data center
- Universities/ Research :SDSU, UMD, Jena Univ., JRC
- WRI
- Others?

Next steps

- Kotka recommendations to COFO
- Expert consultation on methods
- In expectation of COFO mandate for FRA 2010:
 - Prepare funding proposal
 - Raise funds
 - Prepare project document
 - Start test phase

Thank you !
