Introduction of United Nations/Japan Long-term Fellowship Programme on Nano-Satellite Technologies
Hosted by
Kyushu Institute of Technology, Japan
~Doctorate in Nano-Satellite Technologies (DNST)~

Keiichi Kimura and Mengu Cho
Kyushu Institute of Technology, Japan

February 8, 2011
UN/COPUOS, Vienna, Austria
Introduction of KIT

4,400 Undergraduate students  
1,700 Graduate students  
370 Academic staffs
Kyushu Institute of Technology

- Located at Kitakyushu region
  - Population of more than 1 million
  - Cost of living is much lower than Tokyo

[Map showing the location of Kitakyushu with respect to Tokyo.]

Motivation

• KIT’s motivation for UN/Japan Long Term Fellowship
  – Contributing to humanity through space engineering education to international students and promotion of peaceful use of outer space
  – Recruiting excellent students from all over the world
  – Providing a multicultural learning environment to Japanese students
  – Strengthening Space Engineering researches
Introduction of Doctorate in Nano-Satellite Technologies (DNST) program
Space Engineering Research and Educations at KIT

- Space Engineering Education at Tobata Campus since 1993
  - Undergraduate (30 students/class) and graduate levels
- Laboratory of Spacecraft Environmental Interaction Engineering
  - Established in 2004
- Center for Nanosatellite Testing
  - Established in 2010
KIT satellite project

- KIT nanosatellite project
  - 20 graduate and undergraduate students working together
    - Responsible for all the processes
      - Conceptual study, design, fabrication, testing and operation
    - Official educational program for graduate student
      - Learn systems engineering and project management
      - Writing a Ph.D thesis
        - Extract a state-of-the-art research element from the project work
Center for Nanosatellite Testing

- Established in 2010
- Provides all the environmental test services except radiation for
  - Nanosatellite up to 50cmx50cmx50cm and 50kg
  - More than 2 million US$ worth equipments
- Reduce the development cost of nano-satellites while ensuring the reliability of the system
Background

- Interest in capabilities for basic space technology development
- Satellites affordable even to universities and smaller institutions
- Small space enterprises from University-based satellite projects
Background

• Presentation of UN Basic Space Technology Initiative (BSTI) at 27th International Symposium on Space Technology and Sciences, Tsukuba, Japan in 2009

• Mission
  – To enhance access to space application tools for sustainable development through building capacity in basic space technology

• Objectives
  – Respond to the growing interest in many countries to establish indigenous capacities in basic space technology
  – Promote international cooperation and information exchange in capacity building in basic space technology
  – Others

KIT answered the call for collaborations made by UN
Long-term Fellowship Programme

• Long-term fellowship to support students studying abroad and gaining experience through *on-the-job training (OJT)*.

• Reading books or attending lectures is not enough

• Experience the complete cycle of designing, building and testing a satellite
  – Even better with launching and operating

• Learn through the failures during the tests and the efforts necessary to correct the defects

• Learn to *think and be innovative*
  – Participate in a satellite project as a team member not as a guest
  – Experience necessary to build a facility from scratch in home country
  – University-like environment is more suitable than well-prepared comfortable institutions, such as space agencies or industries
On-the-Job Training

KIT can offer on-the-job training opportunities to those who want to start their own space program in their home country.
UN/Japan long-term fellowship

- United Nations/Japan Long-term Fellowship Programme on nano-satellite technologies
  - Doctorate in Nano-satellite Technologies (DNST)
- KIT provides financial support to students entering Doctorate programme (3 years) from developing countries or countries in economic transition
  - Extensive research opportunities in core technologies for nanosatellite system development
    - Especially infrastructure, such as testing
  - Participate in the KIT satellite project
    - Find a research topic for Ph.D. thesis
  - Doctorate degree (Doctor of Engineering) after completion of 3 year course work/research and successful defense of the Ph.D. thesis
- The first student to enroll in KIT on October 1, 2011
UN/Japan long-term fellowship

- Support by KIT
  - 2 students each year, 3 years for each student
  - Enrolment as a full-time Ph.D. candidate student after passing an examination by KIT faculties.
  - Exemption from the tuition and entrance fees
  - Room in on-campus dormitory (5,900 yen/month = 55 euro/month)
  - Living expense of 80,000 yen per month
- Support by UN
  - Presentation of the DNST programme to the UN Member States
  - Promotion of the DNST programme on the UNOOSA web site
  - Pre-selection of the candidate student (KIT will make the final selection.)
  - Payment of the travel expenses to KIT
How to apply?

- Application package is at
- For UN
  - Or Google “UN Japan space fellowship”
- For KIT
  - [http://cent.ele.kyutech.ac.jp/unitednations.html](http://cent.ele.kyutech.ac.jp/unitednations.html)

**The application deadline is April 30, 2011**

Conclusions

• United Nations/Japan Long-term Fellowship Programme on nano-satellite technologies
  – Provide the hands-on experience necessary to build capabilities in basic space technology, especially infrastructure building through testing of nano-satellites
  – Further worldwide nano-satellite development efforts

Goal

Promote the peaceful and innovative use of outer space with the participation of a larger number of countries for the benefit of humanity
