

**Agenda Item 10:      Spin-off benefits of space technology-review of current status**  
**By: Mrs. Erna Sri Adiningsih**

*Mr. Chair,*

*Indonesia pays attention on the benefit of spin-off of space technology. In parallel with the development of space technology, Indonesia has just begun the development of spin-off technology such as in research and innovation in autonomous vehicle, smart buoy, disaster (tsunami, landslide) early warning system, sea (wave level) height measurement, Automatic Identification System (AIS), Automatic Dependent Surveillance Broadcast (ADSB), wearable tracking device, and many others.*

*We are attached to the importance of international collaborative activities facilitated by UNOOSA or with COPUOS Member States in promoting the benefit of space technology spin-off to improve our daily life. We look forward to developing more mutual benefit collaborations in the future.*

*Thank you.*
