

Agenda Item 14: Future Role and Method of Work of the Committee

Republic of Korea National Statement

Sixty-Seventh Session of the Committee on the Peaceful Uses of Outer Space

June 19, 2024

Thank you, Chair,

As a country actively engaged in lunar exploration activities, including Korea Pathfinder Lunar Orbiter (KLPO), the Republic of Korea has consistently emphasized the importance of international cooperation to ensure safe and sustainable lunar exploration. We also believe that this Committee should serve as a platform to discuss the international cooperation.

In this regard, the Republic of Korea welcomes the proposal from the distinguished delegates of Romania to establish the Action Team on Lunar Activities Consultation (ATLAC) and hopes to participate as a co-sponsor of this proposal. Moreover, we are considering providing financial support for ATLAC to facilitate its activities.

In closing, we would like to take this opportunity to express our gratitude to Romania and urge other Member States to join us in supporting and participating in the initiative.

Thank you.
