

Contributions on elements for an initial draft set of recommended principles for space resource activities

Reference is made to the Invitation Circular with reference OOSA/2024/43, CU 2024/221 with an invitation to provide contributions on elements for an initial draft set of recommended principles for space resource activities.

Below, please find the contribution from Norway on elements we believe should be considered:

- Compatibility and interoperability between systems
- Access to and sharing of data pertaining to resource activities on celestial bodies
- Rights and obligations pertaining to sampling, surveying and exploitation
