KAZAKHSTAN SPACE COMMUNICATION SYSTEM

2025

“KazSat” space communications system

Space segment:

- Communications and broadcasting satellite "KazSat-2"
- Communications and broadcasting satellite "KazSat-3"

Ground infrastructure:

- Space Communication Center of the "Akkol"
- Space Communication Center of the "Kokterek".

Kazakhstan satellite communication

- utilisation of the geostationary orbit, offering Kazakhstan a strategic advantage in maintaining communications
- securing rights to use new frequency bands helps avoid conflicts with other countries and operators
- protection against radio interference and prevent signal disruptions
- ensuring the possibility of "reserving" the orbital-frequency resource

The background of the slide is white with abstract geometric patterns. On the left, there are several wireframe structures, some resembling cubes or other polyhedra, composed of thin grey lines and dots. Some of these structures are partially filled with light grey. On the right, there is a large, complex wireframe structure that looks like a stylized letter 'R' or a similar shape, also made of thin grey lines and dots. The overall aesthetic is clean and modern, with a focus on geometric forms.

Thank you for
attention!
