

GNSS Education Activities The University of Tokyo

Dinesh MANANDHAR, Associate Professor
Center for Spatial Information Science, The University of Tokyo

6th NOV 2018

dinesh@iis.u-tokyo.ac.jp

Overview

- Conduct GNSS Trainings, Workshops and Seminars
 - Basically in Asian countries
 - Indonesia, Laos, Malaysia, Myanmar, Nepal, Thailand, The Philippines Vietnam
 - Bangladesh, India, Singapore (planned in 2019)
 - Also, Some African Countries
 - Mozambique, Rwanda
- Conduct Webinars
 - Conduct webinars under MGA (Multi-GNSS Asia)
 - Global Access, Anybody can attend and free
 - Upto 100 participants online webinar at a time
 - Please register at <http://gnss.peatix.com>
- RPD (Rapid Prototype Development) Challenge
 - Encourage students and researchers to bring solutions and business values by solving real-life problems
 - The 1st RPD Challenge was done during MGA 2018 in Melbourne, Australia on 24th OCT 2018
- Develop Low-Cost High-Accuracy Positioning Systems (L-CHAPS)
 - Integrate low-cost receivers for RTK, PPK or PPP processing
 - Android or Raspberry Pi versions

GNSS Training at GIC/AIT, Thailand, 23 – 26 JAN 2018

Jointly organized by CSIS/UT, GIC/AIT and ICG

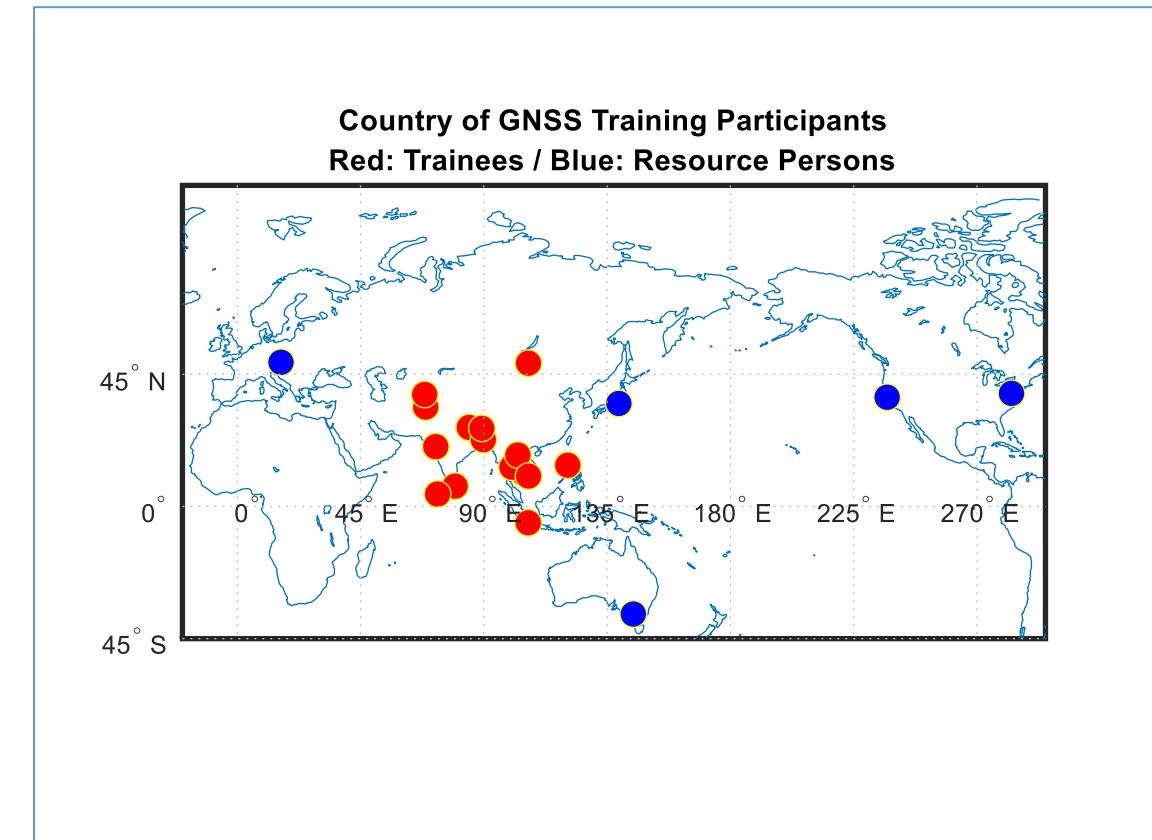

Afghanistan, Australia, Austria, Bangladesh, Bhutan, Cambodia, India, Indonesia, Japan,
Maldives, Mongolia, Nepal, The Philippines, Sri Lanka, Tajikistan, Thailand,
The United States of America, Vietnam

64 Participants from 15 Countries

GNSS Training at GIC/AIT, Thailand, 23 – 26 JAN 2018

Total Participants	67
International Participants	25
Funded International Participants	(14)
Self-funded International Participants	(11)
Thai Participants	24
AIT Students and Researchers	18
Number of Countries	15 Afghanistan, Bangladesh, Bhutan, Cambodia, India, Indonesia, Japan, Maldives, Mongolia, Nepal, The Philippines, Sri Lanka, Tajikistan, Thailand, Vietnam
Number of Resource Persons (International)	7 (Australia: 1, Japan: 3, UNOOSA: 1, USA :2)
GIC Resource Persons	7

GNSS Training at GIC/AIT, Thailand, 23 – 26 JAN 2018

Day 1: Online Presentation

GPS Introduction : David Turner, State Dept. of the USA

GPS Signal Structure : Tom Stansell, Stansell Consulting, USA

1. Sharafat Gadimova, UNOOSA/ICG, Austria
2. Dinesh Manandhar, Associate Professor, The University of Tokyo, Japan
3. Yuichi Hayakawa, Associate Professor, The University of Tokyo, Japan
4. Nobuaki Kubo, Associate Professor, TUMST, Japan
5. Suelynn Choy, Associate Professor, RMIT University, Australia
6. David Turner, State Department, USA (online lecture)
7. Thomas Stansell, Stansell Consulting, USA (online lecture)
8. GIC/AIT resource persons and staffs

GNSS Training Courses : 14 – 18 JAN 2019

Jointly organized by CSIS/UT, GIC/AIT and ICG

GNSS Applications

- Surveys, Mapping and Geodesy
- Transportation
- Legal and Law Enforcement
- Timeline
- Disaster
- Vehicle Applications
- Emergency Services
- Time Stamping
- Space Weather
- Agriculture
- Personal Navigation
- Location Based Applications
- Warning during Disasters
- Surveillance / Geo-Security
- Robotics
- Telecommunications
- Power Grid
- Scientific Timing Applications

GNSS for Policy and Decision Makers – Course: T131-18
A Seminar and Workshop Program

Jointly Organized by GIC/AIT, CSIS/UT and ICG

Introduction

The Global Positioning System (GPS) is widely used in almost all systems that require absolute position and time. It is due to its accuracy, availability and reliability. In addition to GPS of the United States, several other systems such as Global Navigation Satellite System (GLONASS) of the Russian Federation, the European global navigation system (Galileo) of the European Union, the BeiDou Navigation Satellite System (BDS) of China, the Indian Regional Navigation Satellite System (IRNSS), India and the Quasi-Zenith Satellite System (QZSS), Japan are now available. Collectively, they are called GNSS (Global Navigation Satellite System). Today, a GNSS receiver can provide centimeter level accuracy even with a low-cost receiver. If an error correction technique is used, thus, availability of low-cost and high-accuracy receivers will eventually increase GNSS related applications and its market. In order to keep the pace with these new applications and technological developments, it is necessary to develop human resources and skills.

Geoinformatics Center of Asian Institute of Technology (GIC/AIT) together with the Center for Spatial Information Science of The University of Tokyo (CSIS/UT) and International Committee on GNSS (ICG) are taking initiatives to create awareness on GNSS and its applications in Asia and the Pacific region. This program is a part of this initiative.

Course Schedule : 14 – 16 JAN 2019

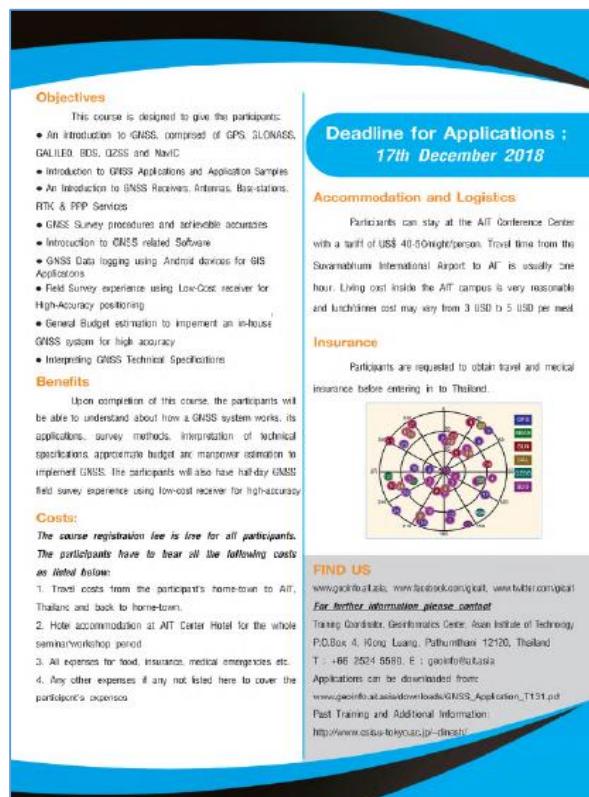

The participants may also join the last 2 days of GNSS Training (Course T151-30) on 17 – 18 JAN 2019. These two days are dedicated for GNSS Field Survey, Data Analysis, and Accuracy Estimation etc. This will provide the participants more field experience on GNSS data logging and processing.

Seminar Place:
Geoinformatics Center, Asian Institute of Technology,
Pathumthani, Thailand

Why you should attend this program?

GNSS is not only for Surveying, Mapping and Geo Navigation. It's used in many systems where position data are required. For example, monitoring traffic congestion data, monitoring public transport for security and safety, automation in agriculture, dynamic population census, timing services in banking sectors and telecommunication systems, security and safety related applications, environment, fire-re-charging station as well as space weather.

If you are involved in the policy and decision making level of any institution, project or any of the above mentioned working field or even if you would like to learn how GNSS can be utilized in various applications, then you are invited to attend this course in order to enhance your knowledge of GNSS and its applications.

Deadline for Applications :
17th December 2018

Accommodation and Logistics

Participants can stay at the AIT Conference Center with a tariff of US\$ 40.00night/person. Travel time from the Suvarnabhumi International Airport to AIT is usually one hour. Living cost inside the AIT campus is very reasonable and incheeche cost may vary from 3 USD to 5 USD per meal.

Objectives

The course is designed to give the participants:

- An introduction to GNSS, comprised of GPS, GLONASS, GALILEO, BDS, QZSS and NavIC
- Introduction to GNSS Applications and Application Samples
- An Introduction to GNSS Receivers, Antennas, Base stations, RTK & PPP Services
- GNSS Survey procedures and achievable accuracies
- Introduction to GNSS related Software
- GNSS Data logging using Android devices for GIS Applications
- Field Survey experience using Low-Cost receiver for High-Accuracy positioning
- General Budget estimation to Implement an in-house GNSS system for high accuracy
- Interpreting GNSS Technical Specifications

Insurance

Participants are requested to obtain travel and medical insurance before entering in to Thailand.

Benefits

Upon completion of this course, the participants will be able to understand about how a GNSS system works, its applications, survey methods, interpretation of technical specifications, approximate budget and manpower estimation to implement GNSS. The participants will also have half-day GNSS field survey experience using low-cost receiver for high-accuracy positioning.

Costs:

The course registration fee is free for all participants. The participants have to bear all the following costs as listed below:

- Travel costs from the participant's home-town to AIT, Thailand and back to home-town.
- Hotel accommodation at AIT Center Hotel for the whole seminar/workshop period.
- All expenses for food, insurance, medical emergencies etc.
- Any other expenses if any not listed here to cover the participant's expense.

Training on GNSS - Course: T151 - 30
Jointly Organized by GIC/AIT, CSIS/UT and ICG

Introduction

The Global Positioning System (GPS) is widely used in almost all systems that require absolute position and time. It is due to its accuracy, availability and reliability. In addition to GPS of the United States, several other systems such as Global Navigation Satellite System (GLONASS) of the Russian Federation, the European global navigation system (Galileo) of the European Union, the BeiDou Navigation Satellite System (BDS) of China, the Indian Regional Navigation Satellite System (IRNSS), India and the Quasi-Zenith Satellite System (QZSS), Japan are now available. Collectively, they are called GNSS (Global Navigation Satellite System). Today, a GNSS receiver can provide centimeter level accuracy even with a low-cost receiver. If an error correction technique is used, thus, availability of low-cost and high-accuracy receivers will eventually increase GNSS related applications and its market. In order to keep the pace with these new applications and technological developments, it is necessary to develop human resources and skills.

Geoinformatics Center of Asian Institute of Technology (GIC/AIT) together with the Center for Spatial Information Science of The University of Tokyo (CSIS/UT) and International Committee on GNSS (ICG) are taking initiatives to create awareness on GNSS and its applications in Asia and the Pacific region. This training course is a part of this initiative.

Course Schedule : 14 – 18 JAN 2019

Training Place :
Geoinformatics Center, Asian Institute of Technology,
Pathumthani, Thailand

Objectives

This course is designed to give the participants:

- An introduction to GNSS, comprised of GPS, GLONASS, GALILEO, BDS, QZSS and NavIC
- General overview of signal processing in receiver, receiver performances (low-cost receiver vs. high-end survey-grade receiver)
- Introduction to RTKLIB and related software for High-Accuracy GNSS Data Processing (RASPL, RTKLIB, SWI, MAPS etc.)
- GNSS Raw Data Processing logged by Android Device
- Field Survey using Low-Cost receiver for High-Accuracy positioning
- GNSS Data Processing for real-time and Post-processing RTK and PPP
- GNSS Data Logging using Android Device

Course Contents:

- Introduction to GNSS
- GNSS Signal Structure
- Signal Processing in Receiver
- Data Formats, Coordinate Systems etc
- Importance of Base Station
- Applications of GNSS
- Survey Procedures – DGPS, RTK PPP
- Use of Android Devices for GNSS Survey
- Hands-on Training for RTK using RTKLIB, RTKLIB-etc, RtkSurvey and Data Processing

Funding

Co-organizers have kindly agreed to provide limited financial assistance for travel for eligible participants and preference given to participants from the developing countries. Financial assistance will cover the travel costs only, and will NOT include expenses such as accommodation, food, insurance, medical emergencies etc. Please see below for an estimation of cost. N/T for Accommodation and Food.

The organizers reserve the right to selecting the participants for granting the financial assistance for travel.

Deadline for Applications

Requesting for Travel Funding : 31st October 2018
Staff Funding : 17th December 2018

Accommodation and Logistics

Participants can stay at the AIT Conference Center with a tariff of US\$ 40.00night/person. Travel time from the Suvarnabhumi International Airport to AIT is usually one hour. Living cost inside the AIT campus is very reasonable and incheeche cost may vary from 3 USD to 5 USD per meal.

Insurance

Participants are requested to obtain travel and medical insurance before entering in to Thailand.

- GNSS Training : 5 days Training Course
- GNSS for Policy and Decision Makers : 3 days Seminar + Workshop

MGA GNSS Webinar

Upcoming Webinars: (1) RTK from Android GNSS Raw Data (2) Early Warning System (3) GNSS Signal Authentication (4) PNT from Micro/Cube Satellites and many more.....

Webinar Registration : <http://gnss.peatix.com>

Past Webinar Reference: <https://home.csis.u-tokyo.ac.jp/~dinesh/WEBINAR.htm>

We need YOU as a Resource Person. Please contact us.....
Dinesh Manandhar, CSIS, The University of Tokyo, dinesh@iis.u-tokyo.ac.jp

MGA GNSS Webinar

MGA Webinar Series : 1
Very Cheap RTK Receivers:
Changing the Landscape of Positioning Services

Dinesh Manandhar
Center for Spatial Information Science
The University of Tokyo
Contact Information: dinesh@iis.u-tokyo.ac.jp
25th May 2018

MGA Webinar Series : 5
Threats to GNSS : Can We Falsify GPS Data?

Dinesh Manandhar
Center for Spatial Information Science
The University of Tokyo
Contact Information: dinesh@iis.u-tokyo.ac.jp
22nd June 2018

GNSS Online Lecture # 1
Lecture ID: WT-103-401
Lecture Topic: GNSS Data Processing in RTKLIB

Dinesh Manandhar
Center for Spatial Information Science
The University of Tokyo
Contact Information: dinesh@iis.u-tokyo.ac.jp
11th May 2018

MGA Webinar 1st June

How to use free RTK Software?

Tokyo Univ. of Marine Science and Technology : Nobuaki Kubo

MGA Webinar by Prof. N. Kubo

MGA Webiner

Automated Driving Systems and Dynamic Map

15th June 2018
Satoru Nakajo
Spatial Information Business team leader,
Mitsubishi Research Institute Inc.

MGA Webinar by Dr. Nakajo

Multi-GNSS Asia Webinar #7 July 20, 2018

GNSS Applications from Daily Life to Plantations

Nachikiko KOHTAKE, Ph.D., PMP.
Professor, Grad. School of System Design and Management, Keio University
Steering Committee Member, Multi-GNSS Asia
Adjunct Prof., School of Engineering, Asian Institute of Technology
<http://www.sdm.keio.ac.jp/~mailto:kohtake@sdm.keio.ac.jp>

MGA Webinar by Prof. Kohtake

Fish !

Single Point Positioning RTK

MGA Webinar by Prof. N. Kubo

IRNSS/ NavIC- Indian Effort towards a regional independent satnav

An independent regional navigation satellite system being developed by Indian Space Research Organization (ISRO).
Designed to provide accurate position information service to users in India as well as the region extending up to 2500 km from its boundary (primary service area).

MGA Webinar by Dr. Bose, India

Early Warning System

Diagram showing the flow from GNSS and GPS/LIDAR data to a Control Center, which processes Real-time Data Collection, Emergency Alert, and Emergency Response.

MGA Webinar by Prof. Kohtake

Past Webinar Reference: <https://home.csis.u-tokyo.ac.jp/~dinesh/WEBINAR.htm>

MGA 2018 & (YP/S) Young Professional & Student Forum

- ICG provided Travel Funding to SIX Participants from Asia to attend MGA 2018 in Melbourne
 - India (2), The Philippines (2), Thailand (1), Vietnam (1)
- YP/S : Forum for interaction between the students, researchers and professionals
 - A networking event between the YP/S Forum participants and industry representatives were held

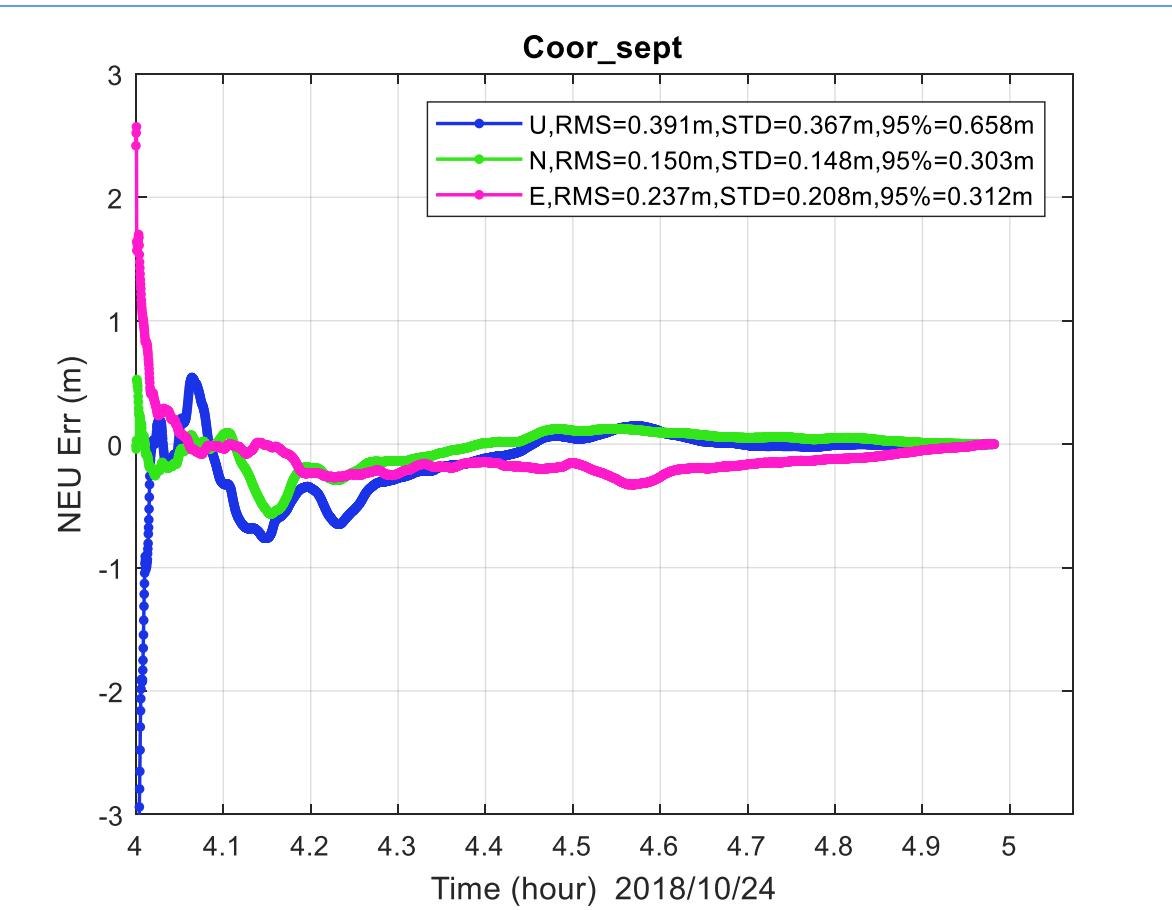

RPD (Rapid Prototype Development) Challenge

- RPD Challenge Topics during MGA 2018
 - PPP from GNSS Dual Frequency Smart-Phone Raw Data
 - GNSS for Rowing Speed Measurement
 - Low-Cost GNSS for Smart-Agriculture
 - Driver's Behavior Index (DBI) Development from GNSS Data
 - Interference Monitoring
- All ICG funded participants participated the RPD Challenge
- Follow-Up Discussions will take place even after MGA through online meetings

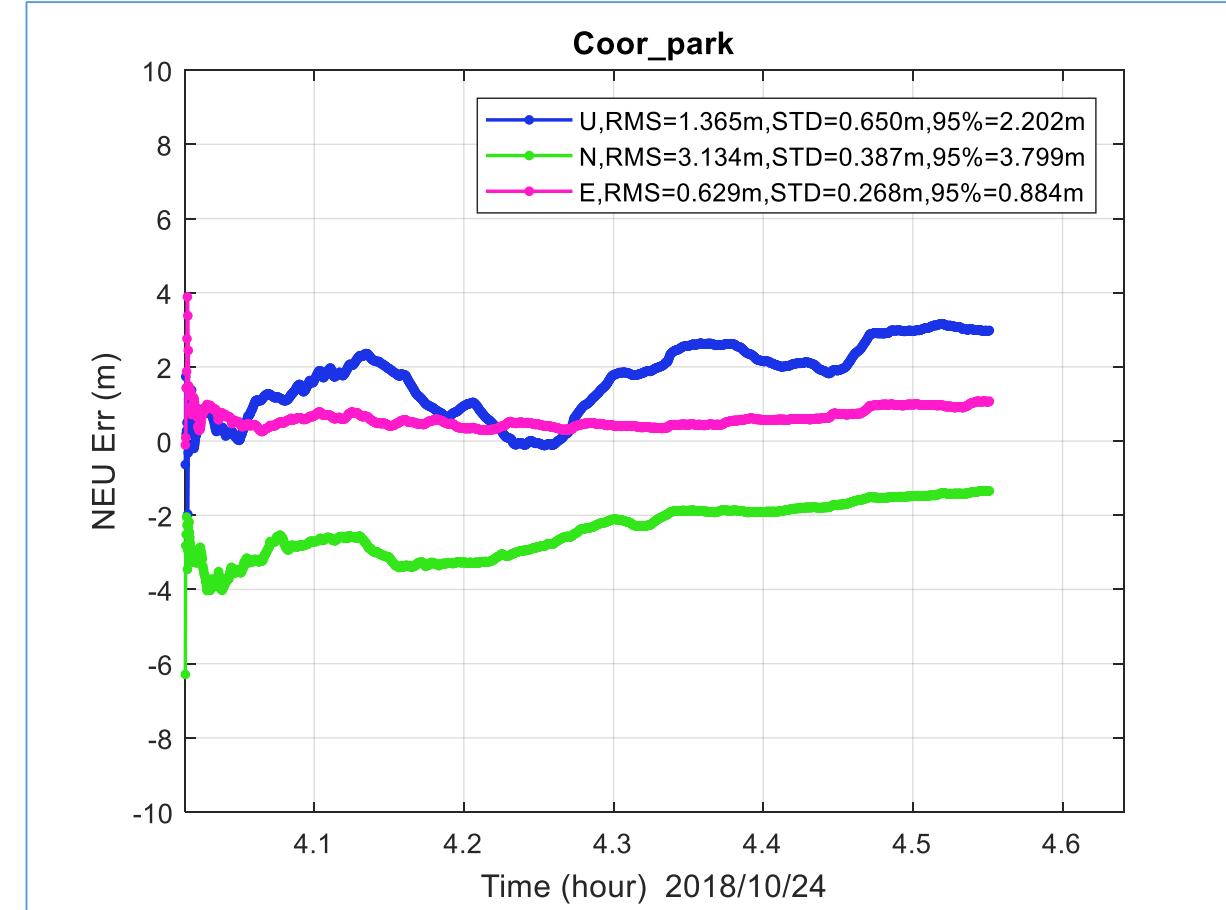

RPD Challenge: Xiaomi Mi8 vs. SEPTENTRIO PPP Results

SEPTENTRIO

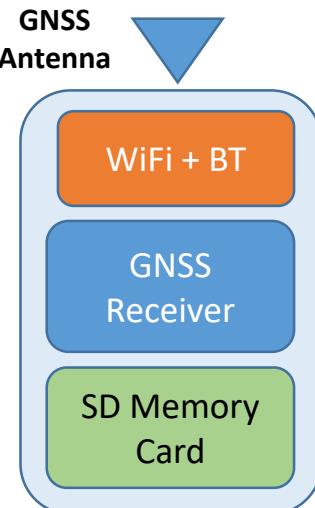

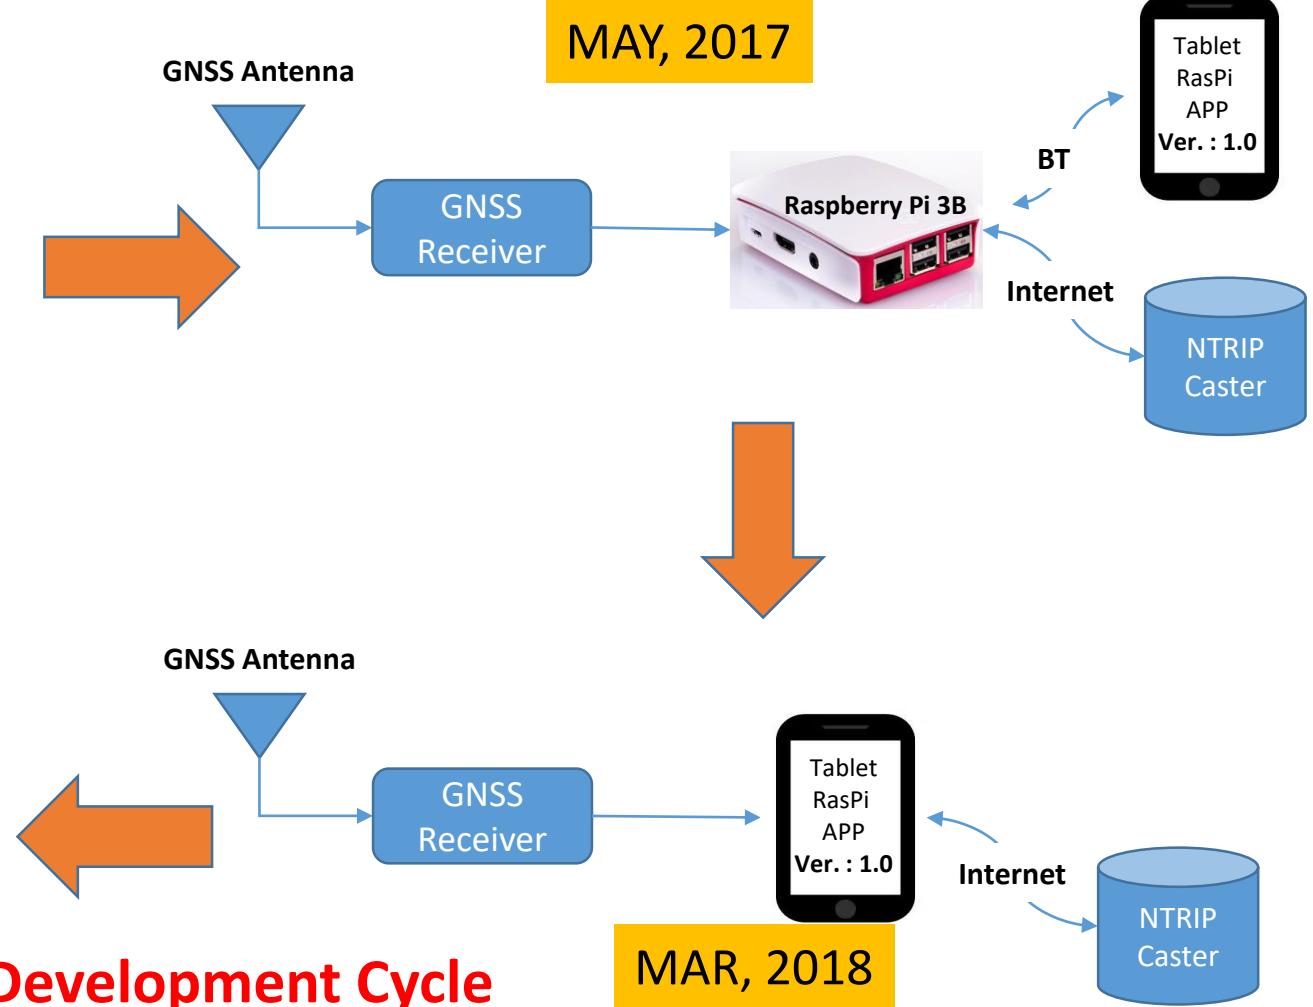

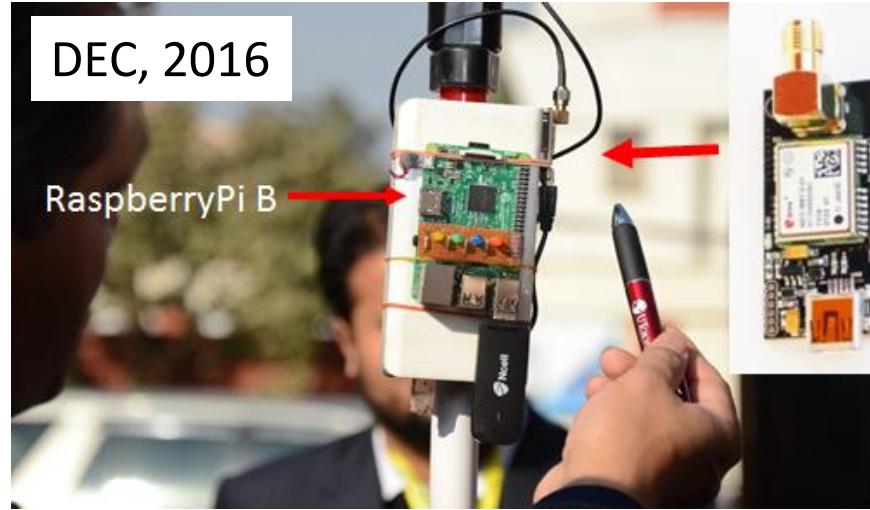

Xiaomi Mi8

These are just a very quick comparison between multi-frequency, multi-GNSS receiver (Septentrio) vs. Dual-frequency (L1/L5) GNSS receiver of Xiaomi Mi8 smart-phone device. These results do not reflect the actual performance capabilities of Septentrio receiver. Actual performance will be better than these results with proper antenna setting.

Low-Cost High-Accuracy Positioning System (L-CHAPS)

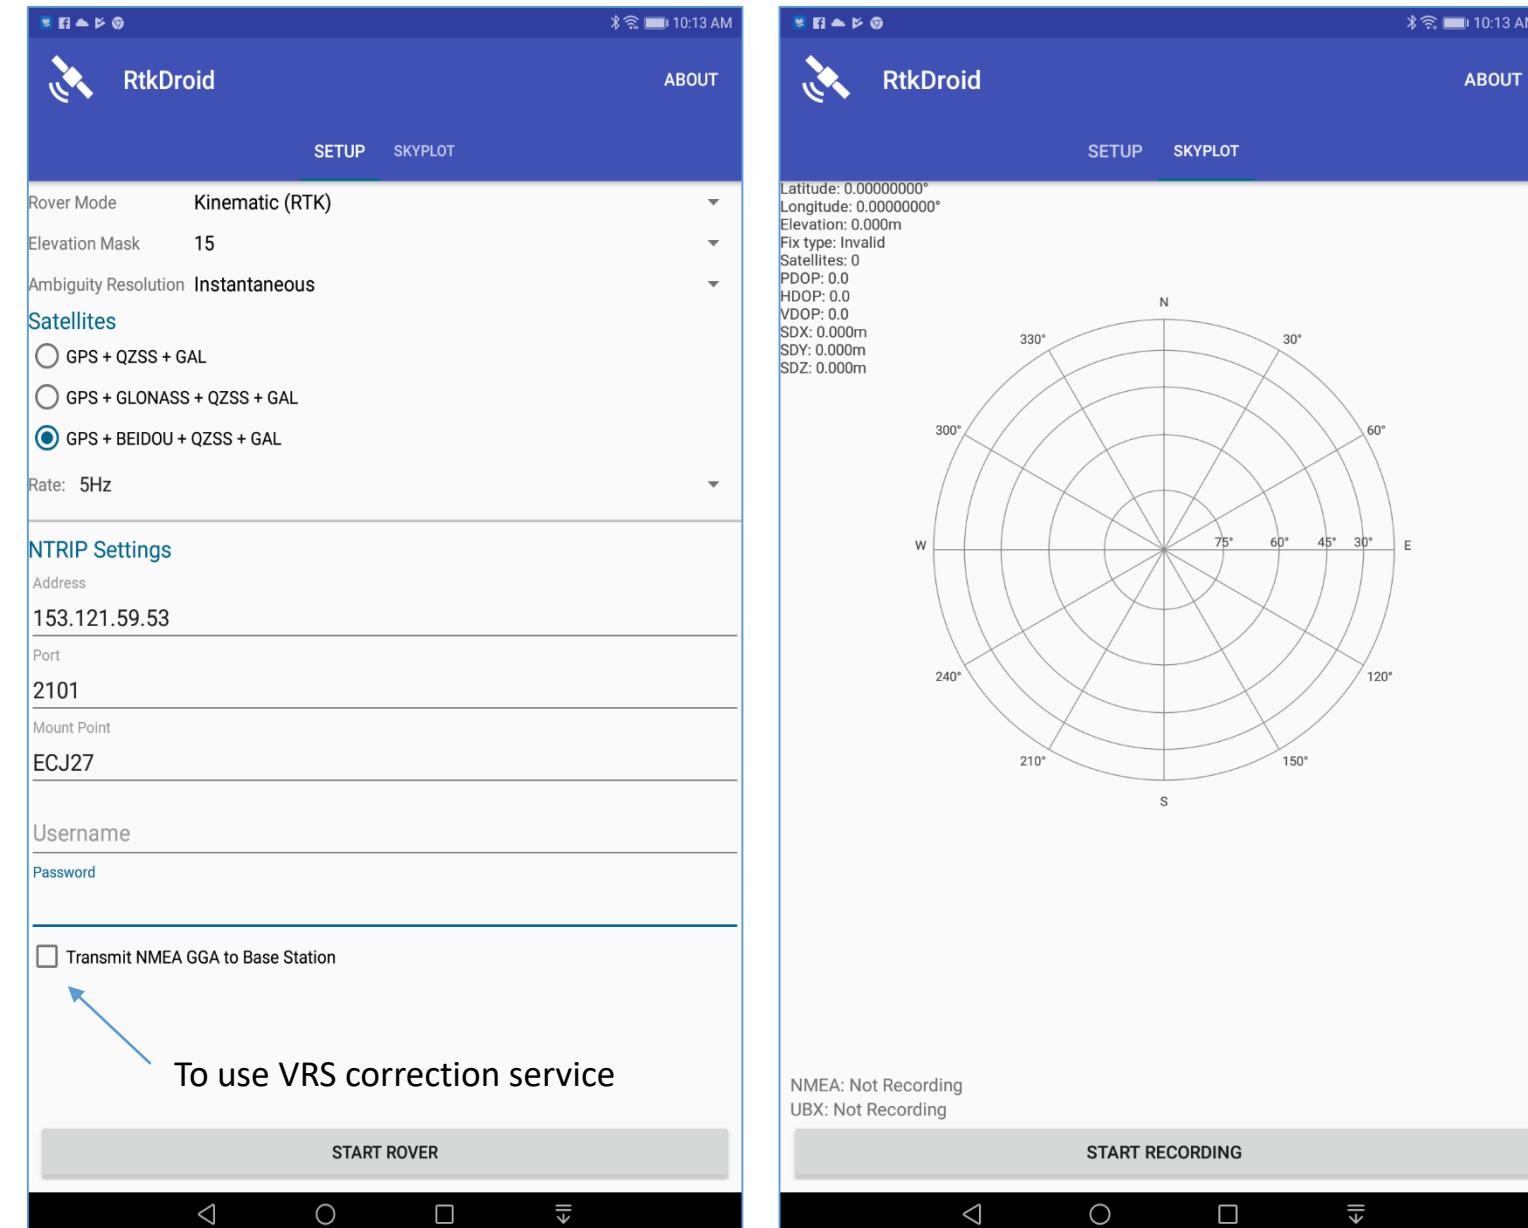

Meaning of Low-Cost : \$100 x 100cm x 100gm

Android APPs for GNSS Data Logging & Processing

- RTKDROID
 - Real-Time RTK for Android devices
 - Based on RTKLIB
 - Already Released – Distribution by Request
- MADROID
 - Real-Time PPP based on MADOCA correction data through MADOCAs server
 - Based on u-blox F9 dual frequency receiver
 - Under Developed – will be released Q1 2019
- SW Maps
 - Excellent GNSS data input tool for GIS in Android devices
 - Built-in GNSS Receiver or External GNSS Receivers can be used
 - External GNSS Receivers can be connected by BT or Serial Cable using an OTG cable
 - Any receiver that output generic NMEA can be connected

RTKDROID APP
