Space for Climate Action

Promoting the use and raising awareness of best practices for using space technologies to meet climate objectives

Providing technical support and analysis for space-based climate initiatives in partnership with local government, academic, and UN

Coordinating collaboration between relevant stakeholders to develop and implement national and regional climate adaptation and mitigation projects

Facilitating capacity-building in the design, monitoring, evaluation, and implementation of projects that use space to address climate change

“The greatest threat to our planet is the belief that someone else will save it.”

- Robert Swan -
