

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

**Statistical learning TEC predictive model for GNSS ionospheric
delay mitigation in self-adaptive environment-aware SDR
GNSS position estimation algorithm**

**Renato Filjar,
Laboratory for Spatial Intelligence,
Krapina University of Applied Sciences,
Krapina, CROATIA**

**United Nations/Azerbaijan Workshop on the International Space Weather Initiative:
The Sun, Space Weather and Geosphere**

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, *Croatia*)

- Content of presentation
- Problem statement and motivation
- State-of-the-art
- Statistical learning TEC predictive model for GNSS ionospheric delay mitigation - Concept
- Statistical learning TEC predictive model for GNSS ionospheric delay mitigation – Realisation and demonstration
- Statistical learning TEC predictive model for GNSS ionospheric delay mitigation - Validation
- Discussion

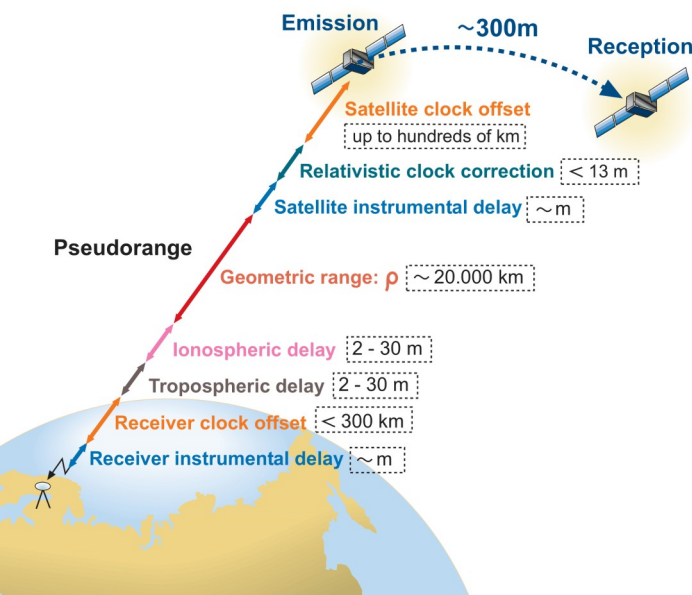

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

Problem statement and motivation

- **Natural and artificial interference in the positioning environment** (space weather/ionospheric, multipath, spoofing etc. effects) cause degradation of GNSS PNT performance
- **Standard GNSS ionospheric correction models are inefficient:**
 - **Generalised**, not addressing geographically constrained effects
 - **Inflexible** to mitigate rapid and short-term effects

POSITIONING ENVIRONMENT

Space weather, geomagnetic, and ionospheric effects

Multipath effects (micro-environment)

Systemic failures (satellite outage etc.)

Adversarial artificial disturbances (spoofing – cyber-threat, meaconing, jamming)

GNSS RECEIVER

GNSS-BASED APPLICATION (LSB)

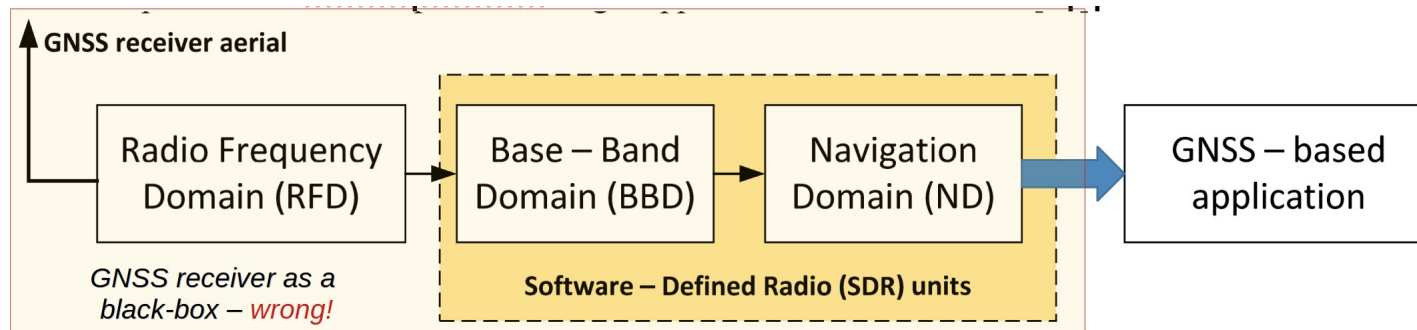

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

State-of-the-art

- GNSS position estimation confined in non-transparent GNSS receiver black-box, detached from GNSS application

- Numerous advancements are not exploited in full: (i) **Software-Defined Radio (SDR)**, (ii) **statistical and machine learning**, (iii) **computational capacity of mobile devices**, (iv) **mobile platforms with SDR GNSS receivers AND embedded sensors** (smartphones, connected vehicles, IoT devices, etc.), (v) open access to **position environment data in near-real time** (space weather, geomagnetic, and ionospheric indices, spatial databases etc.), (vi) **mobile internet and Internet of Things (IoT)**

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

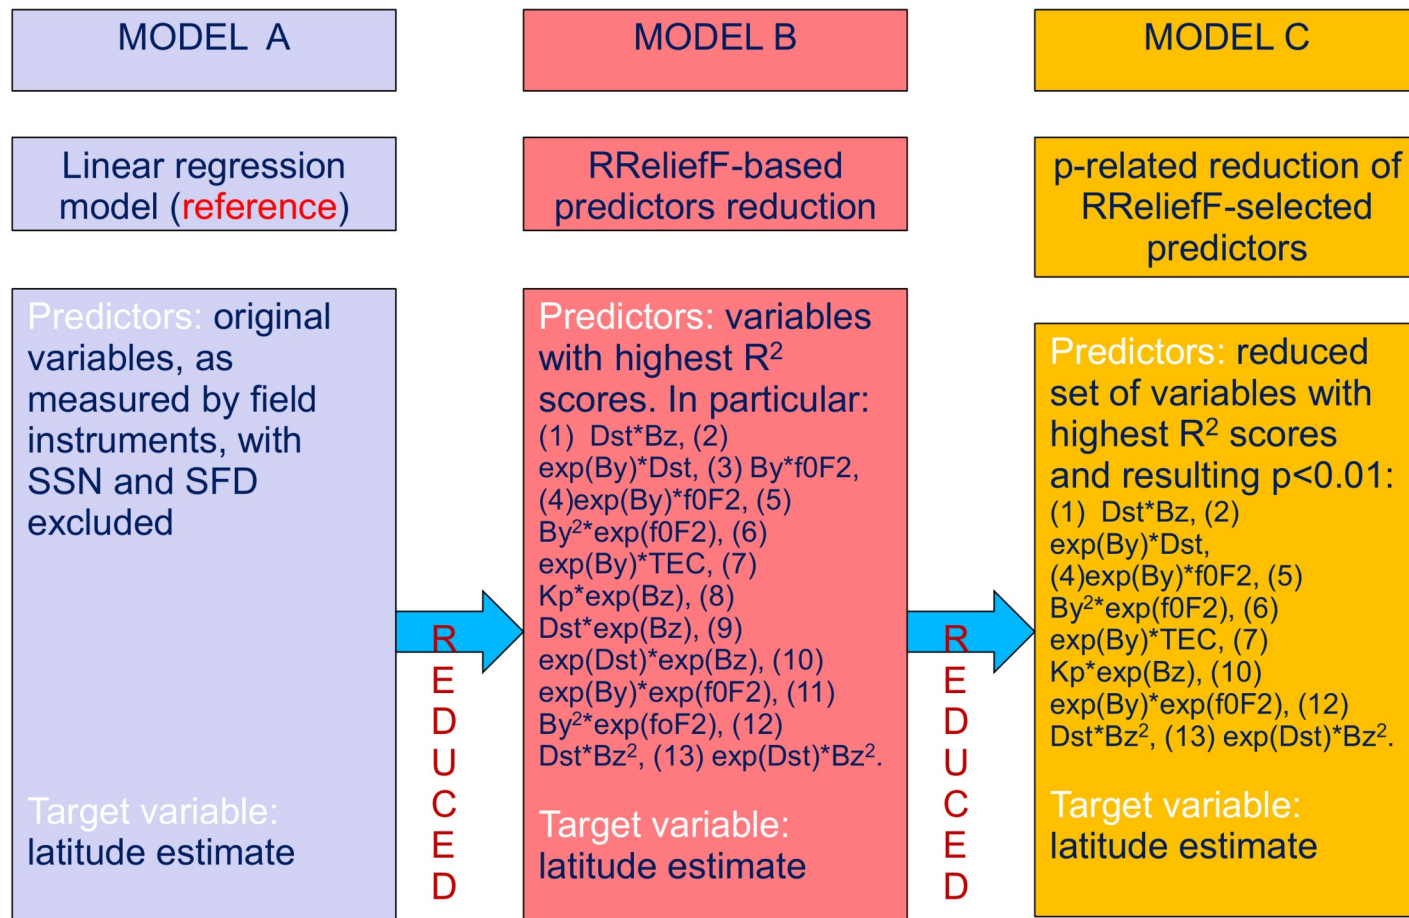

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

State-of-the-art

- Statistical learning multi-predictor models based on immediate SW/ionospheric conditions awareness improve GNSS ionospheric effects correction considerably

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

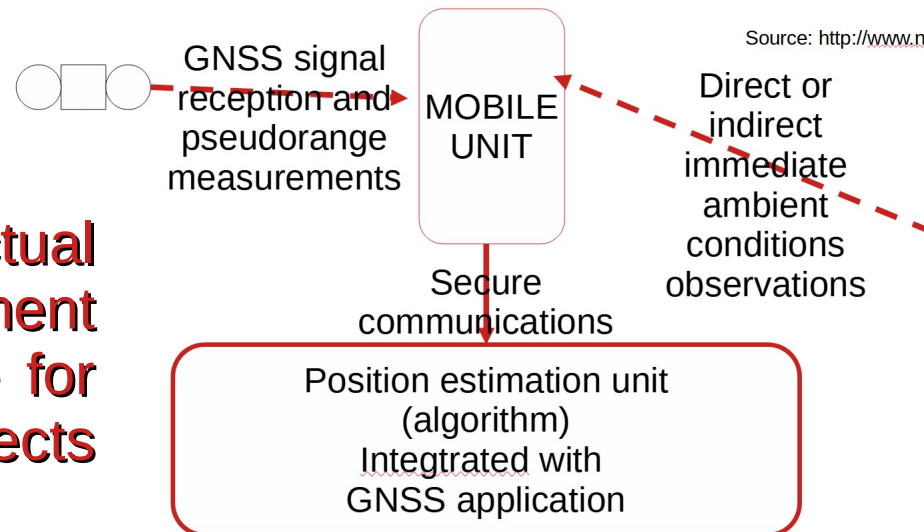

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

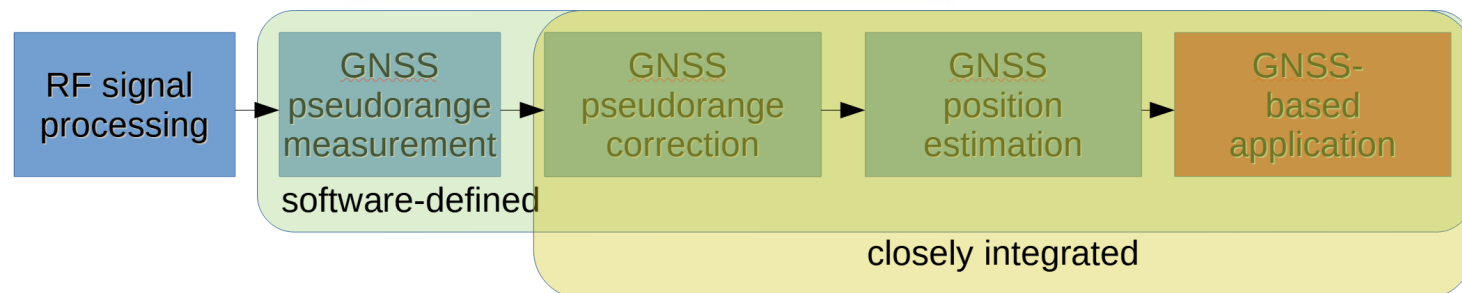

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation - Concept

- Mobile unit → **observing immediate positioning environment conditions** (space weather, ionosphere) **itself**, and/or **utilising trusted third-party real-time observations or predictions for pseudorange correction**

Recognition of the actual positioning conditions → a pre-requisite for improved mitigation of adverse effects

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation - Concept

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

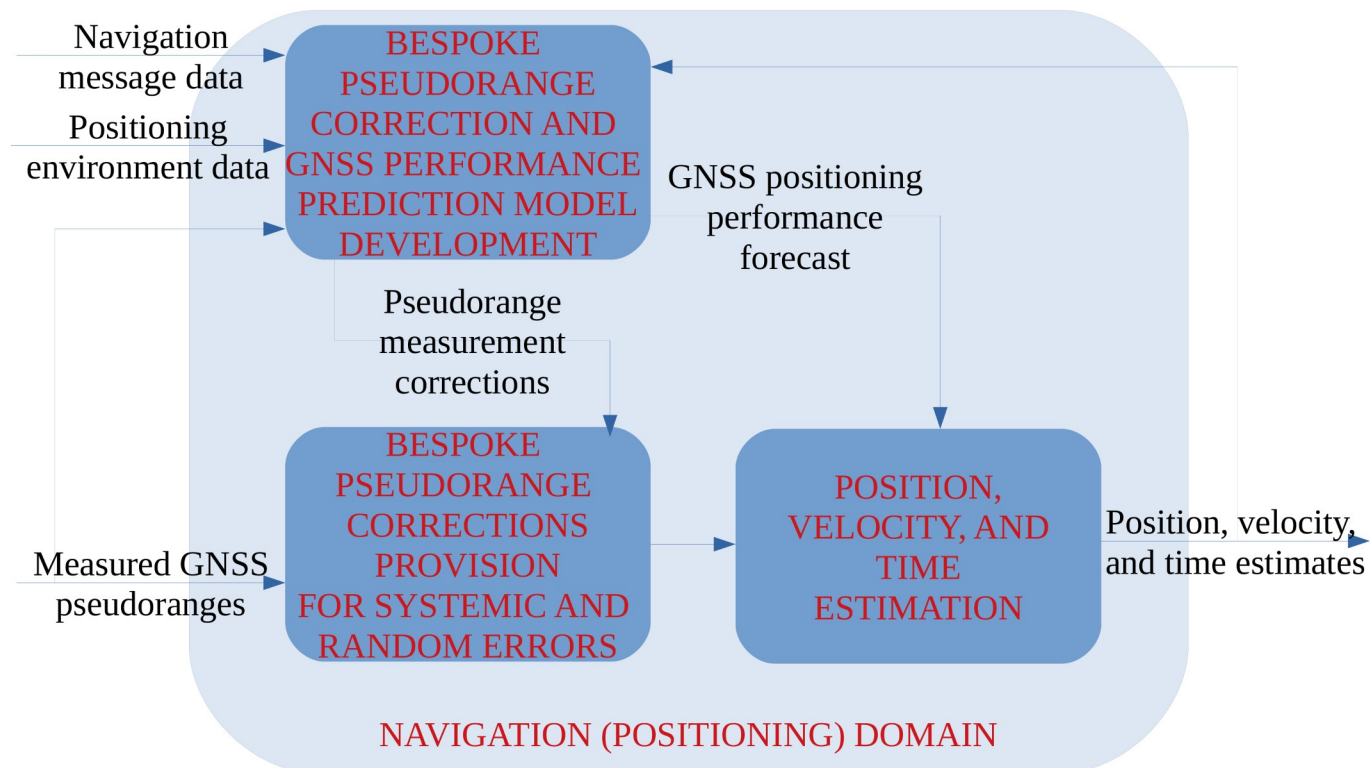

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation – Realisation & demonstration

1. Mitigation of space weather/ionospheric effects on GNSS position estimation performance:

- direct observations of immediate positioning environment
- trusted third-party data (stream, server-application access), with optional processing (interpolation)

2. Tailored framework developed in the open source **R environment for statistical computing**

United Nations/Azerbaijan Workshop on the International Space Weather Initiative: The Sun, Space Weather and Geosphere

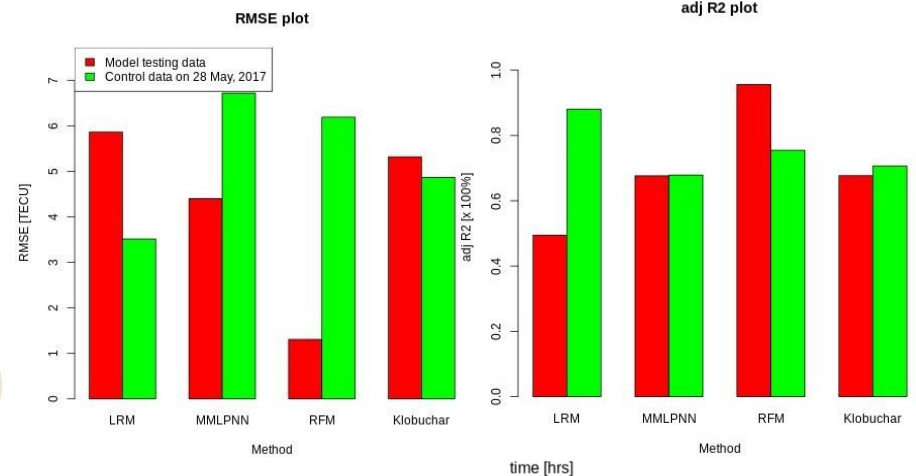

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, Croatia)

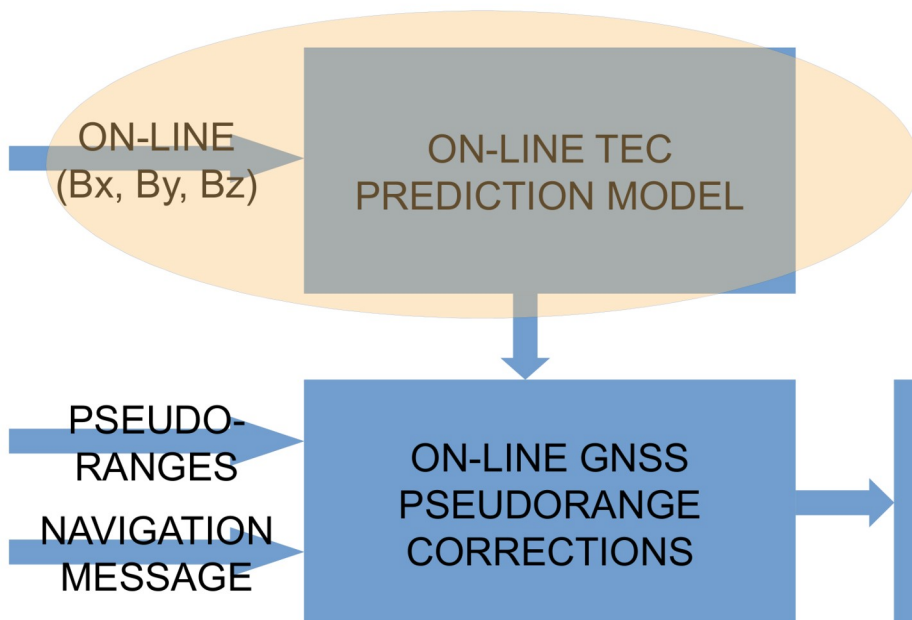

Demonstration

- Case-study of a short-term rapidly developing geomagnetic storm in sub-equatorial area (Darwin, NT, Australia)

LRM ... Linear Regression Model,
MMLPNN ... Monotone Multi-layer
Perceptron Neural Network Model, RFM ...
Random Forest Model, Klobuchar ...
standard Klobuchar Model

Reference model: global Klobuchar model

$x, y, z,$
 $\Delta x, \Delta y, \Delta z,$
 \mathbf{v}, t

Klobuchar model considered as the benchmark / reference model.

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, *Croatia*)

Discussion

- Proposed utilisation of situation awareness of immediate positioning environment conditions for self-adaptive SDR GNSS position estimation.
- GNSS positioning performance demonstrated in the case of short-term rapidly developing ionospheric disturbance.
- The need for space weather/geomagnetic/ionospheric observations and indices data standardisation (access, structure and format), access, and inter/multi-disciplinary competence development
- Activities, potentially through International Space Weather Action Teams (ISWAT, COSPAR)

Baku, Azerbaijan, 31 October, 2022 – 4 November, 2022

Statistical learning TEC predictive model for GNSS ionospheric delay mitigation in self-adaptive environment-aware SDR GNSS position estimation algorithm (R Filjar, *Croatia*)

Recommendations

- 1. Positioning environment (SW/iono) conditions awareness to improve GNSS positioning estimation algorithm, as well as GNSS PNT performance and resilience against adverse effects.
- 2. Self-adaptive statistical learning GNSS ionospheric effects model to be developed based on positioning environment awareness.
- 3. Positioning environment (SW/iono) conditions awareness to be obtained by: (i) direct SW/iono observations in the immediate vicinity of receiver, and/or (ii) link to trusted third-party sources.
- 4. International co-operation to be facilitated, established, and operated to:
 - 4.1 develop standards for SW/iono data structure, formats, and protocols for internet-based data exchange;
 - 4.2 collect, assemble, aggregate, collate, and allow access to location-based real-time and archived SW/iono observations;
 - 4.3 foster self-adaptive GNSS correction model development, validation, and standardisation;
 - 4.4 develop inter-/multi-disciplinary competence in support of transition to positioning environment-aware self-adaptive GNSS positioning.
