

# Training on the Copernicus Climate Change (C3S) and Atmosphere Monitoring (CAMS) Services

Chris Stewart  
**ECMWF Training Coordinator**

*UNOOSA/Austria Symposium  
13<sup>th</sup> September 2022*

PROGRAMME OF  
THE EUROPEAN UNION

IMPLEMENTED BY

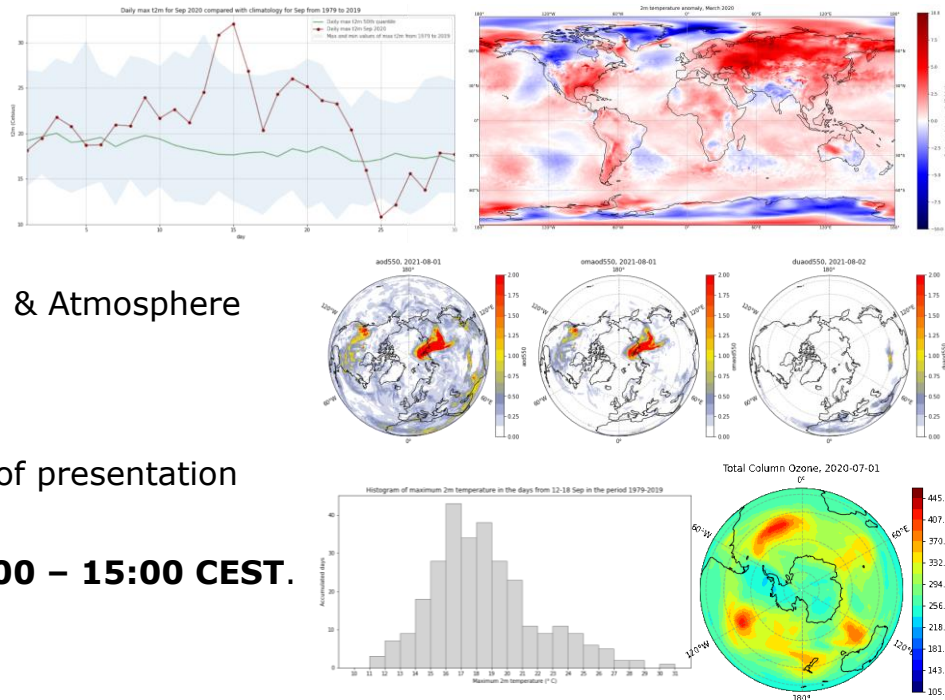

# Training on the Copernicus Climate Change (C3S) and Atmosphere Monitoring (CAMS) Services

## What you will learn:

- ✓ Free data, tools and services provided by the
  - ✓ **Copernicus Climate Change (C3S)**
  - ✓ **Atmosphere Monitoring (CAMS) Services**
- ✓ Access and process data from the Climate (CDS) & Atmosphere (ADS) Data Stores.

## Format:

- ✓ **webinar, one-hour duration** with 40 minutes of presentation and 20 minutes of Q&A.
- ✓ Date and time: **20 September 2022 from 14:00 – 15:00 CEST.**
- ✓ Language: **English**

# Training on the Copernicus Climate Change (C3S) and Atmosphere Monitoring (CAMS) Services

Non-essential homework, but would help make the most of the training!

- **Register with the CDS.** <https://cds.climate.copernicus.eu/>
- **Register with the ADS.** <https://ads.atmosphere.copernicus.eu/>
- **Obtain a CDS API Key.** <https://cds.climate.copernicus.eu/api-how-to>
- **Obtain an ADS API Key.** <https://ads.atmosphere.copernicus.eu/api-how-to>

## Target audience:

Students and young professionals interested to learn about climate and atmosphere data, and to acquire basic data processing skills.

## Prerequisites:

Undergraduate-level knowledge of science and basic knowledge of Python is desirable.

**TUTORIALS ON SEASONAL FORECASTS**

Seasonal Forecast Anomalies

## Copernicus Climate Change Service (C3S) Data Tutorials

*Discover how to access and handle data of the past, present and future climate!*

This website contains Jupyter notebook based tutorials that demonstrate how to access and process the wide variety of climate data provided by the [Climate Data Store \(CDS\)](#) of the [Copernicus Climate Change Service \(C3S\)](#). Each tutorial provides interactive examples of common workflows to derive information about the past, present and future climate. They include code in Python and content in Markdown to provide clear, engaging and practical instructions on data handling which can be run in various cloud environments without any need for installation. You are invited to experiment with these tutorials and tailor them to your needs to extract results meaningful to you! The tutorials make use of climate data freely available on the CDS and accessed using an Application Programming Interface (API).
