

Nemo-HD Microsatellite and Ground Station Infrastructure for Agile Acquisitions of Multispectral Data and Video from Space

Ana Urbas, SPACE-SI
UN/Austria Symposium 2023
Graz, Austria, 14. 9. 2023

- First Slovenian microsatellite.
- Developed together with UTIAS SFL.
- Launched September 2, 2020 on VEGA VV16.
- Circular, Sun-Synchronous Orbit; 10:30 LTDN, 535 km.
- Octagonal form factor, 65 kg mass.
- Low-latency remote sensing:
 - Pan-sharpened multispectral images.
 - High definition video.
- Agile ADCS enables different observation modes.

SPACE SI

NEMO-HD Primary Payload Overview

- Lens: 360 mm f/2.3.
- Six channel simultaneous capture.
 - Panchromatic - 10 km swath, 2.8 m GSD.
 - Multispectral (R, G, B, NIR), 5.6 m GSD.
 - HD Video, 1920x1080, 2 channels:
 - Channel 1: 2.8 m GSD, 5 km swath.
 - Channel 2: 40 m GSD, 75 km swath.

- **Three-Axis Control**
- **Coarse determination sensors:**
 - Magnetometer (1x)
 - Sun Sensor (6x)
 - Rate Sensor (1x)
- **Fine determination:**
 - Star trackers (2x)
 - GSP (L1)
- **Fine control:**
 - Reaction wheels (3x)
- **Magnetorquers (3x) for angular momentum control**

Ground Station (S & X)

**Pomjan near Koper
since 2012**

Transportable Ground Station S, X, Ka/Ku bands

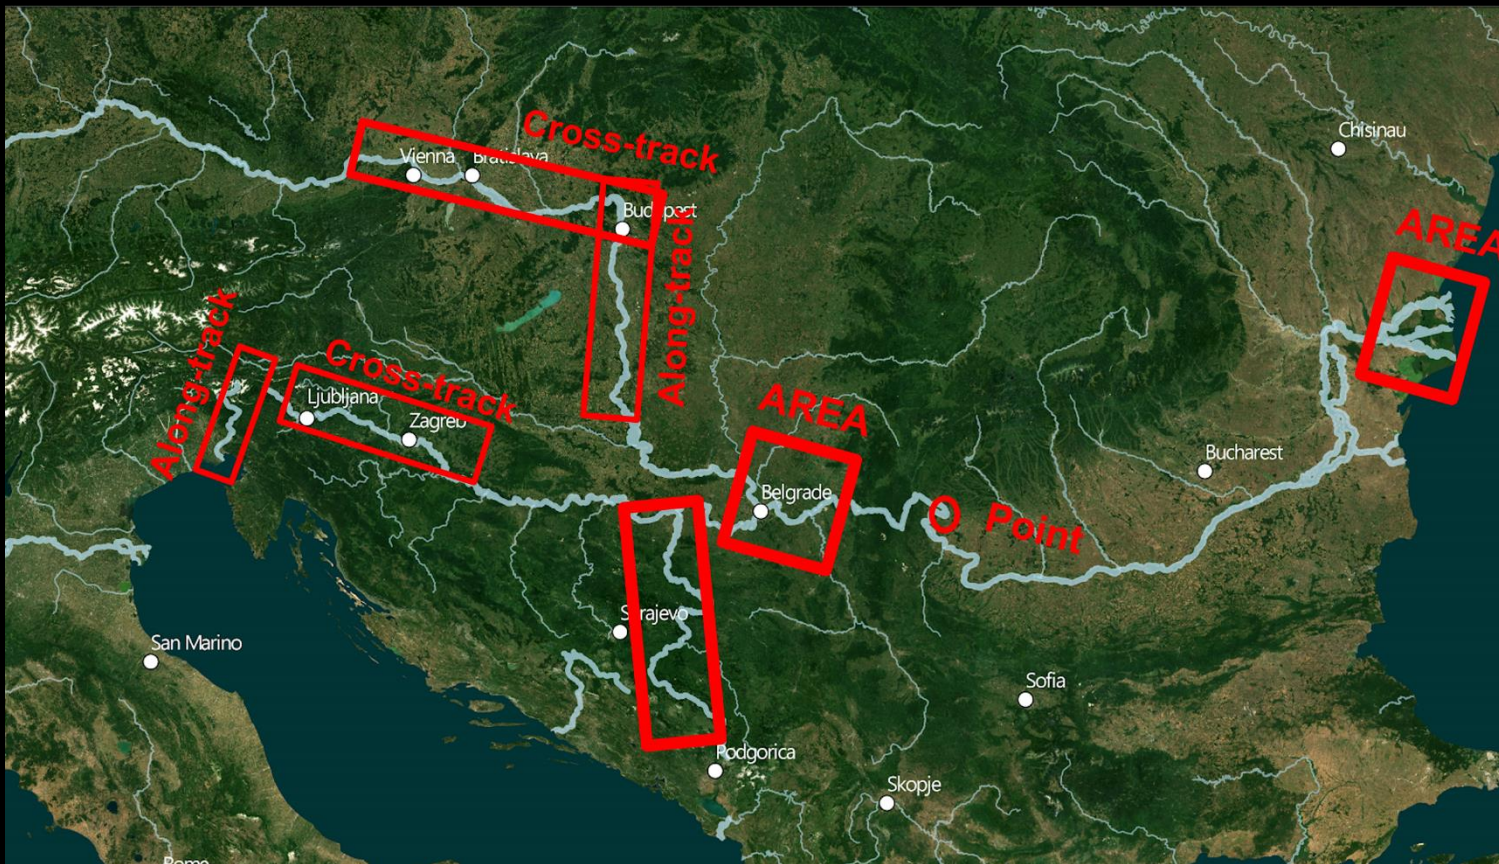

- Can be set-up in one day
- No construction work needed
- Needs electricity and internet connection
- No environmental footprint

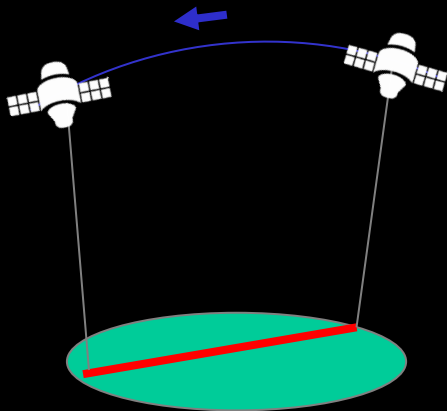

Test agile attitude modes for river basin monitoring

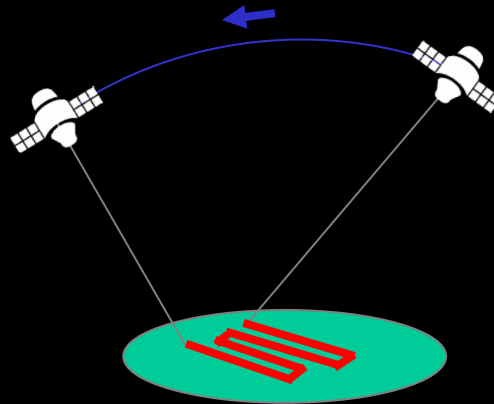

NEMO-HD attitude modes

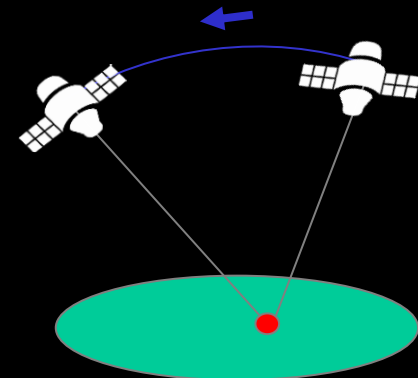

Inertial pointing

Curve tracking

Area scanning

Target tracking

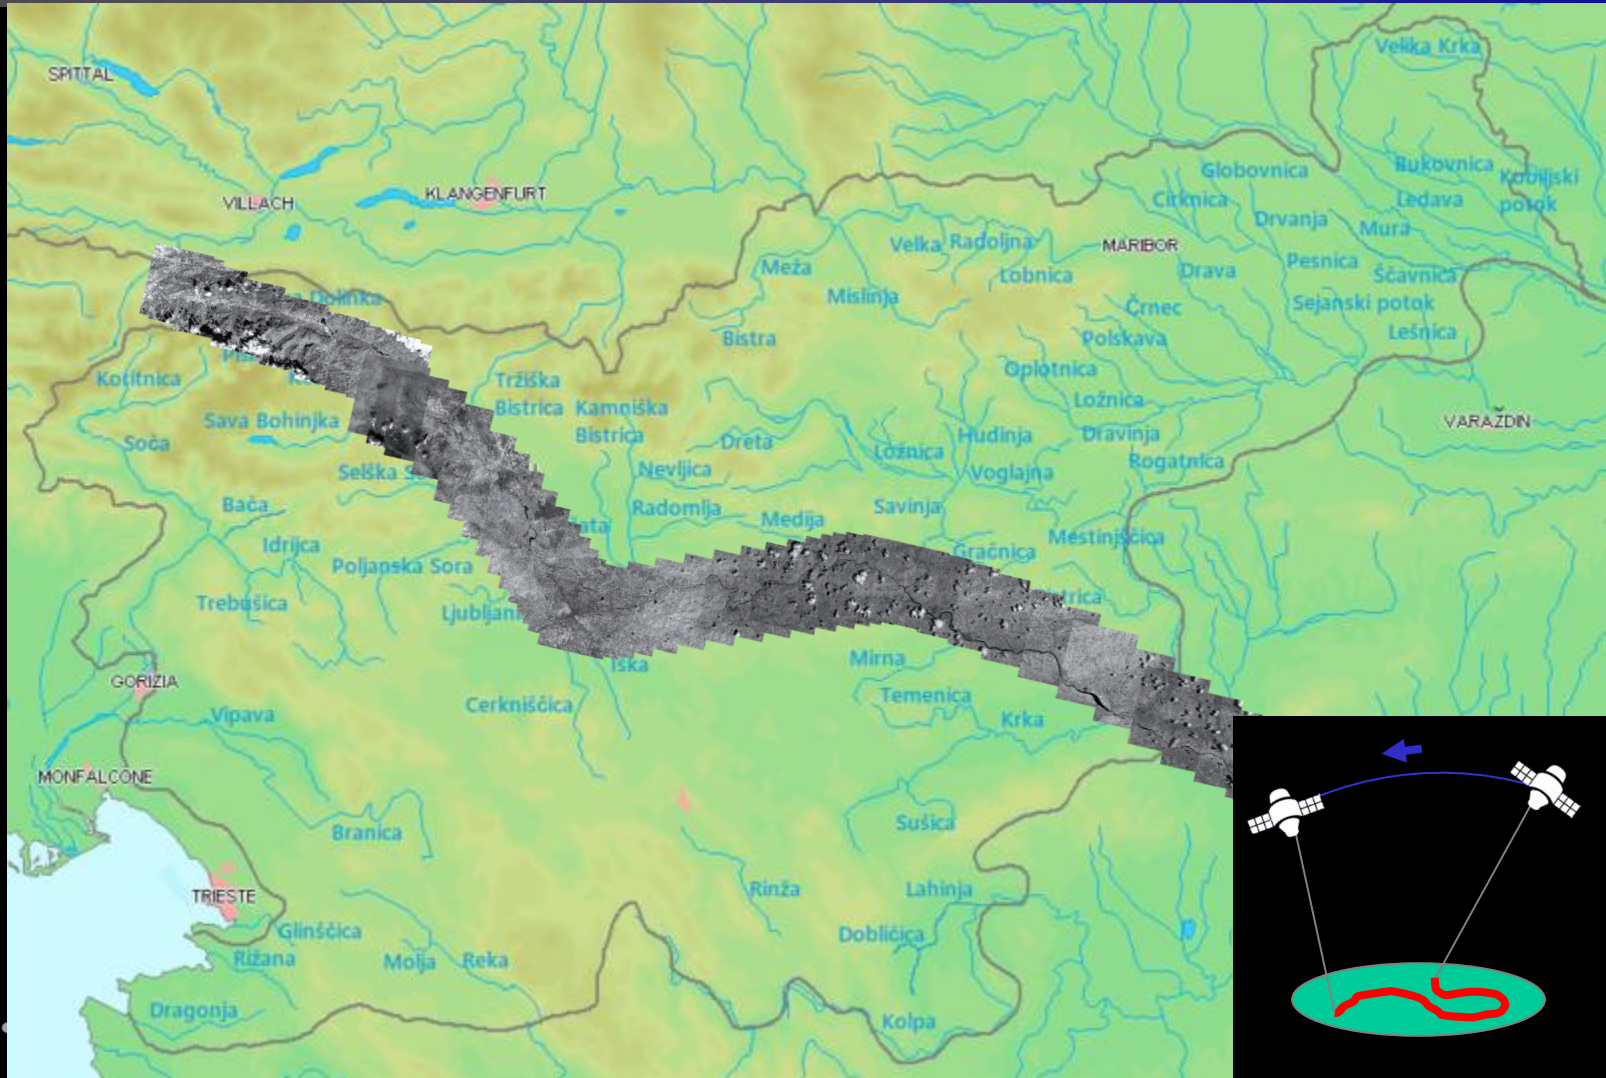

SPACE SI

NEMO-HD Curve tracking - Sava River in Slovenia

Observation of rivers from **source to sea** for holistic management.

SPACE SHUTTLE

HR-HD

LR-HD

Area Scanning – Gulf of Trieste

Live Video from Space

- **Challenge:** How to cover areas of interest wider than the satellite swath with a single microsatellite and get the data in near real time
- **Solution:**
 - the use of different attitude modes
 - **Inertial pointing** for systematic monitoring
 - **Curve tracking** for monitoring of rivers or coastlines (Source-to-sea)
 - **Area scanning** to cover wider areas – river delta, large cities, large forest fires
 - **Target pointing** for video acquisition
 - Transportable ground station for low latency and (near) real time data transmission
