

Operational Space Weather in Norway

Wojciech J. Miloch

Department of Physics, University of Oslo, Norway
e-mail: w.j.miloch@fys.uio.no

UNIVERSITY
OF OSLO

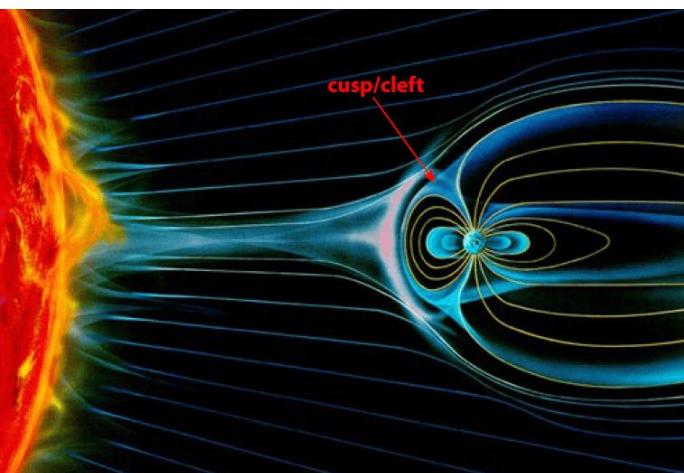

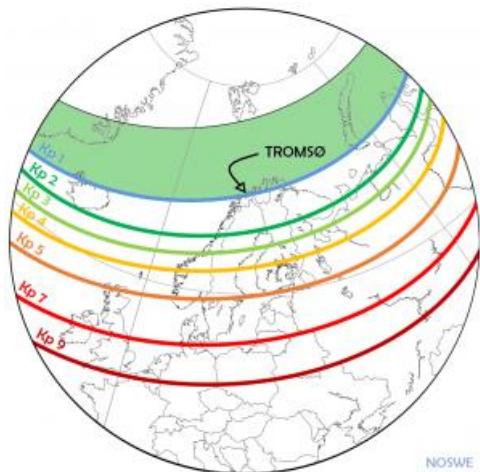

Outline

- Geographical advantage
- Infrastructure
- Space weather studies
- User needs
- Operational space weather

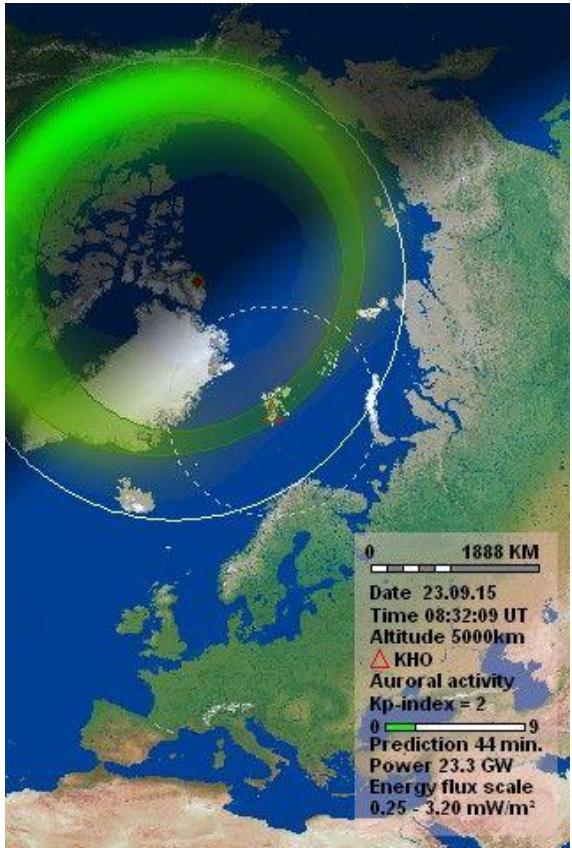

Geographical advantage

- Northern Norway – auroral zone
- Svalbard Archipelago – cusp region / dayside aurora

credits: NASA

credits: <http://khouunis.no/Forecast>

Geographical advantage

Kristian Birkeland (13.12.1867-15.06.1917)

- Pioneer in space physics and space weather research.
- Auroral expeditions / aurora in the lab.
- Birkeland/field aligned currents.
- Also solved the problem of fertilizers in agriculture - nitrogen fixing.

Geographical advantage

Kristian Birkeland (13.12.1867-15.06.1917)

Infrastructure

EISCAT: ESR – 500 MHz / Svalbard

credits: EISCAT

Infrastructure

EISCAT3D – Skibotn: Northern Norway + Sweden + Finland

The first stage consist of three sites with around 20 000 crossed dipole antenna elements arranged in 228 hexagons in a honeycomb-structure.

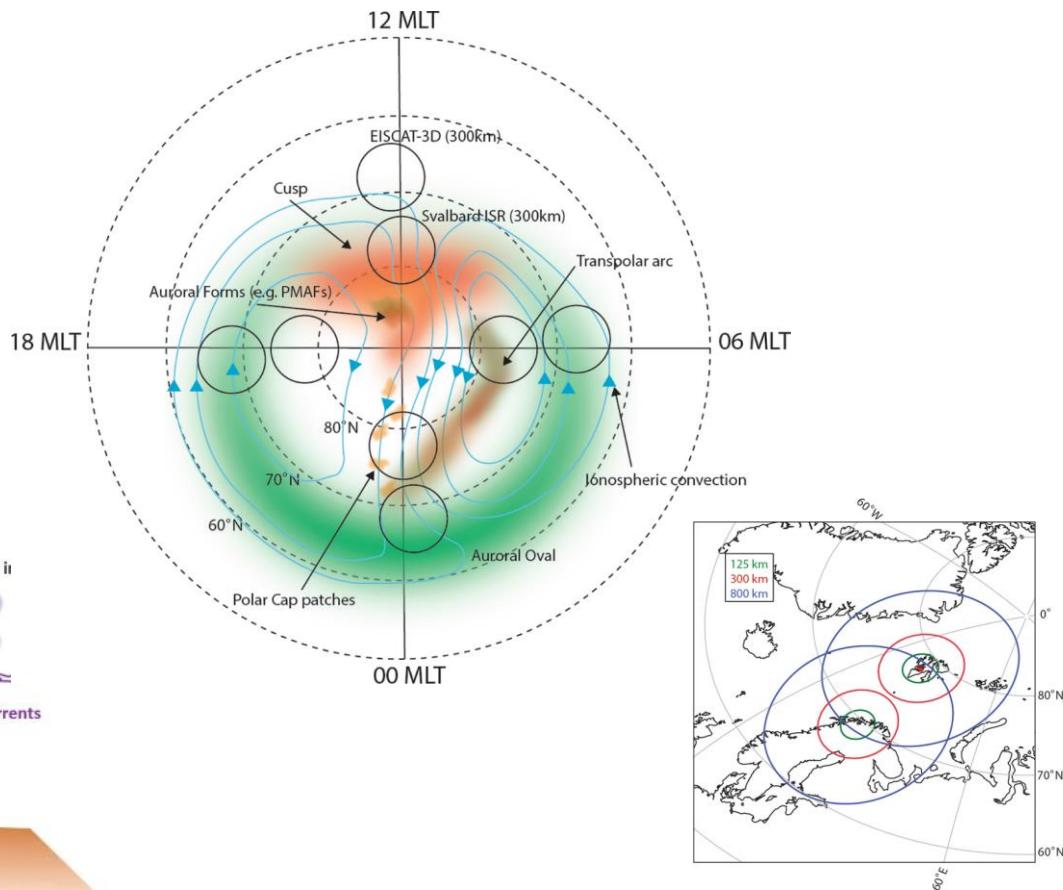

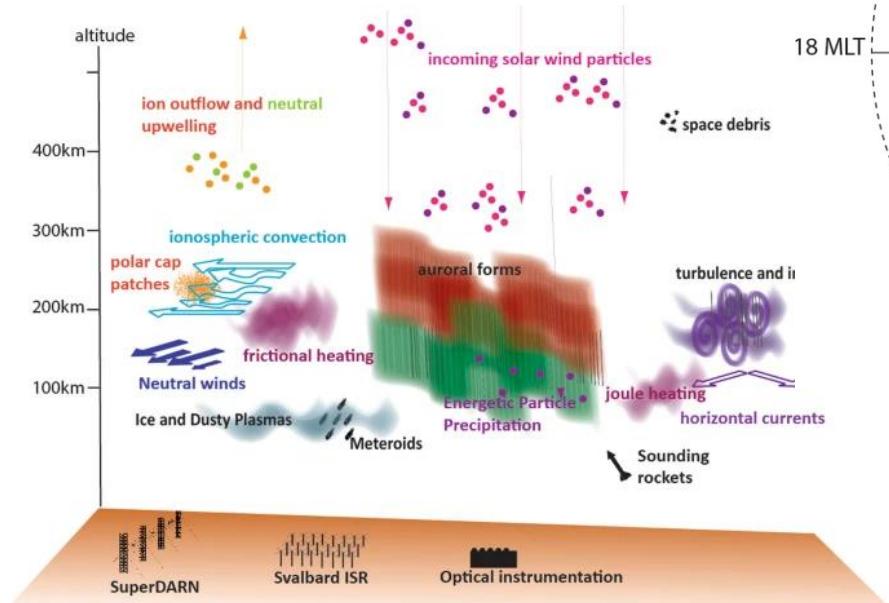

EISCAT 3D Skibotn, Norway:
119 antenna units, 109 in the main site and 10 outriggers for calibrations. 9 919 + 910 dipole antenna elements.

EISCAT 3D Kaisaniemi, Sweden: 55 antenna units with 5 005 dipole antenna elements.

EISCAT 3D Karesuvanto, Finland: 54 antenna units with 4 914 dipole antenna elements.

Infrastructure

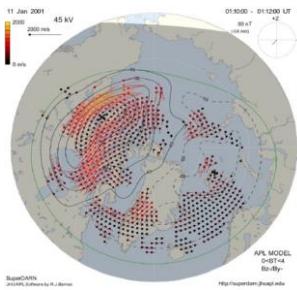

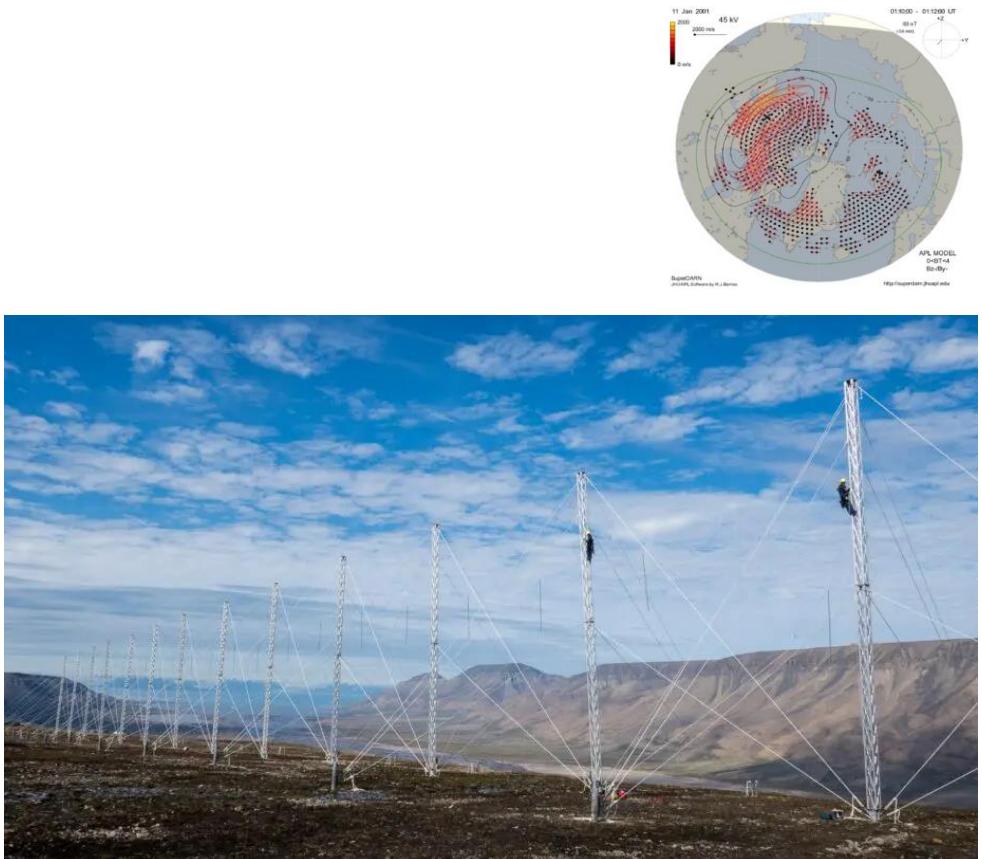

EISCAT: what can we use it for?

Infrastructure

SuperDARN - Svalbard

Examples of studies: irregularities and scintillations

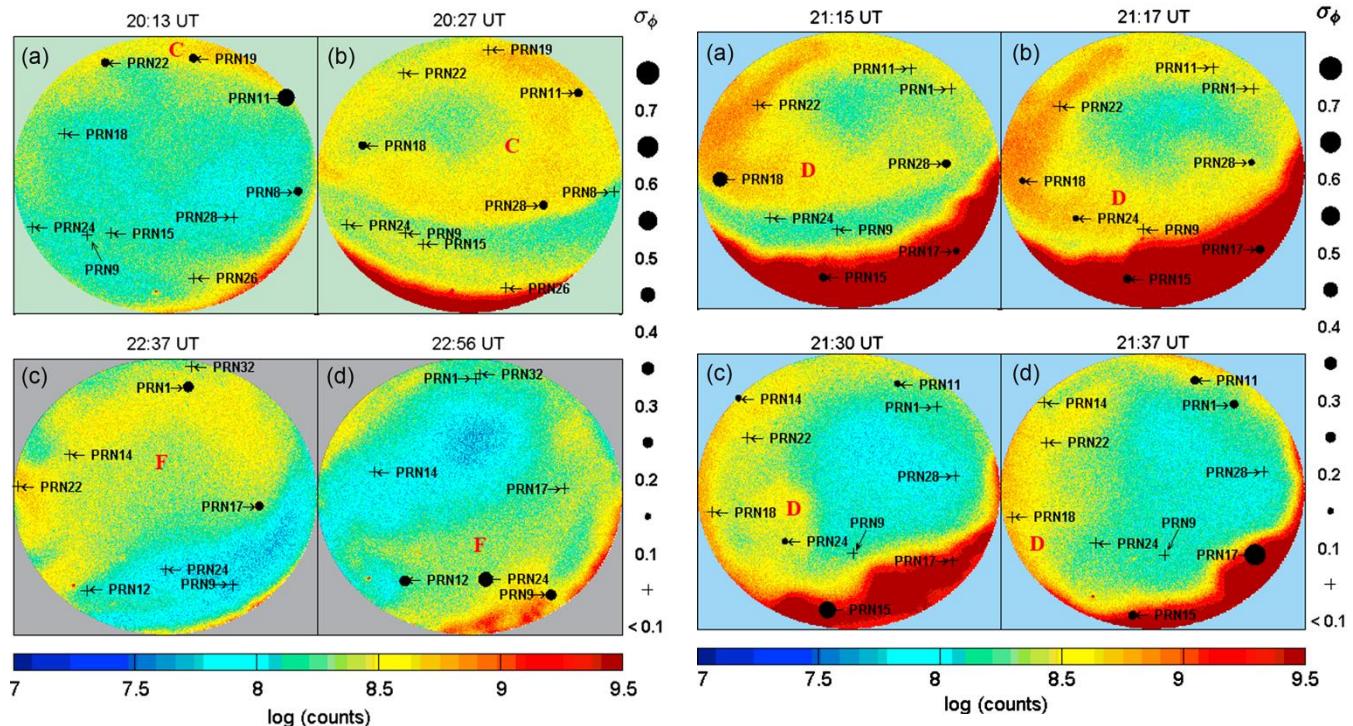

28/10/2019 18:27:23 UT, ASI: NYA (557.7 nm), projection: 150km

Enengl et al., SWSC 2023

Examples of studies: irregularities and scintillations

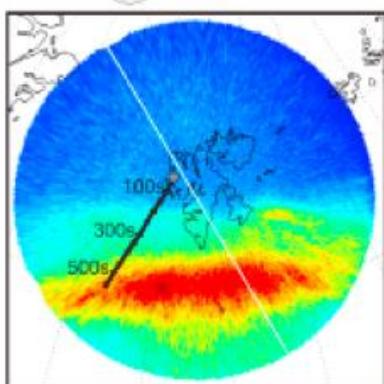

Jin et al, SWSC, 2014

All-sky-imager and GISTM data from Svalbard / NYA – Jan 13, 2013

- Edges of polar cap patches are associated with higher values of sigma_phi scintillation indices.
- When a PCP enters auroral oval the structuring is largest.

Examples of studies: irregularities and scintillations

ICL-2 05. Dec 2008, 1037 UTC / cusp

UiO: multi Needle Langmuir Probes

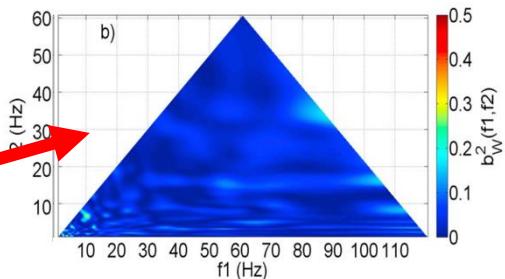

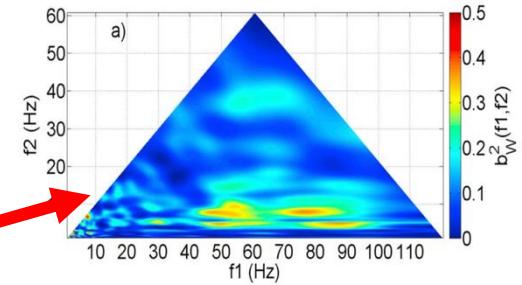

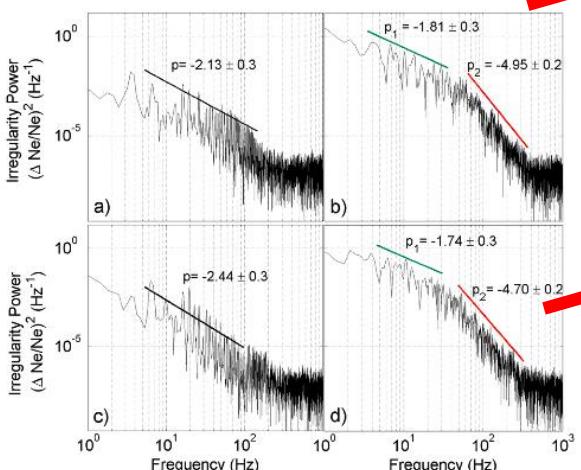

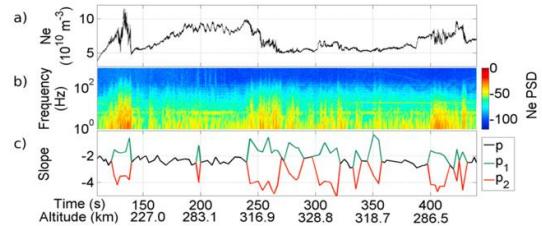

Figure 2. Power spectra and the fits of the slopes for (a) $t_{\text{of}} \in (271.5, 273.5)$ s just after strong fluctuations with no significant precipitation, (b) $t_{\text{of}} \in (265, 267)$ s for strong fluctuations with no significant precipitation, (c) $t_{\text{of}} \in (425, 427)$ s just before strong fluctuations with a significant electron precipitation, and (d) $t_{\text{of}} \in (428, 430)$ s for fluctuations with precipitating electrons. For visualization, the fits are shifted above the data.

Spicher et al. JGR 120, 10959, 2015

Space weather community

- University Center in Svalbard (UNIS); Kjell Henriksen Observatory (KHO)
- University of Bergen (UiB)
- UiT The Arctic University of Norway (UiT)
- University of Oslo (UiO, ionosphere, space, and solar); Troll Ionospheric Observatory
- Norwegian University of Science and Technology, NTNU
- Tromsø Geophysical Observatory (TGO)
- Norwegian Centre for Space Weather (NOSWE)
- Norwegian Mapping Authority (NMA, Kartverket)
- Meteorological Institute (MET)
- Norwegian Space Agency
- Andøya Space
- Industry
- Governmental Agencies
- ...

Space weather research and operations in Norway

Source: NRS

- 1) Oil and gas companies : navigation, positioning, exploration
- 2) Aviation : HF communication and GNSS
- 3) Maritime sector: HF communication and GNSS
- 4) Power grid operators: preparedness and GNSS timing
- 5) Satellite operations
- 6) Constructions and field operations: GNSS and communication
- 7) Tourism industry – Aurora

Norwegian Center for Space Weather (NOSWE) / TGO

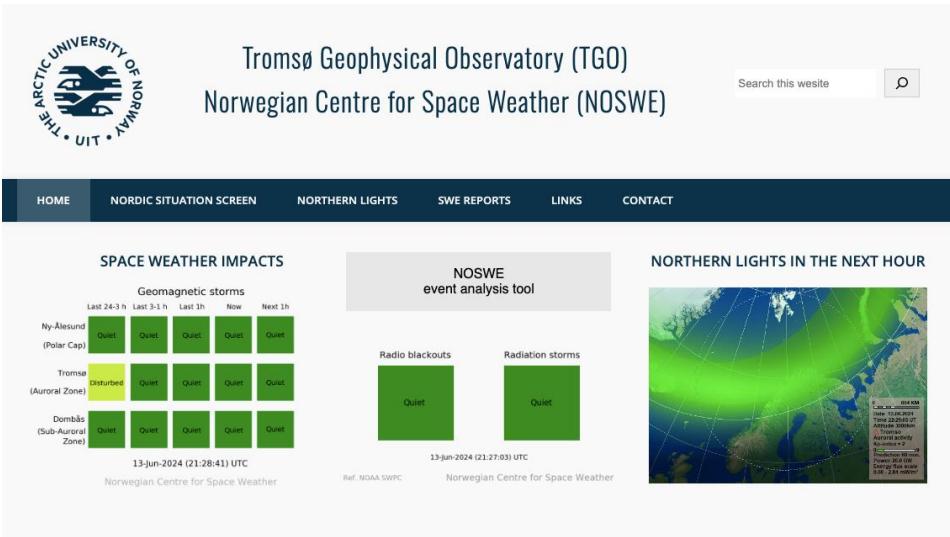

Established in collaboration with the Norwegian Space Agency in 2014.

RWC – ISES since 2019.

Provides picture of conditions in the Arctic (Nordic Situation Screen).

Real time data and forecasts:

- Aurorae & Geomagnetic Field
- Ionospheric Conditions
- Sun and Solar wind
- Event analysis

ISES – International Space Environment Service
Regional Warning Center in Norway

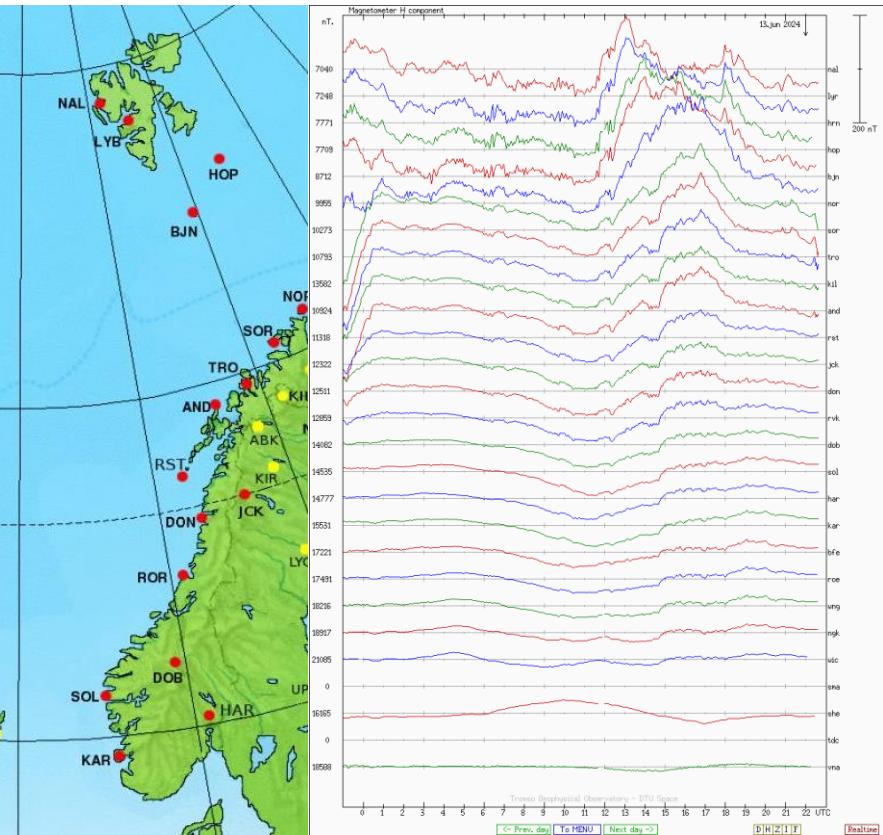

Tromsø Geophysical Observatory

Provides monitoring of geomagnetic conditions. 20 magnetometers across Norway.

Ca. 12000 users and 600 000 magnetograms downloaded per week.

Data products for use for geological surveys and undersea drilling / offshore industry.

Digisonde in Tromsø – ionosonde data from 1980 on the portal. Historical data since 1932.

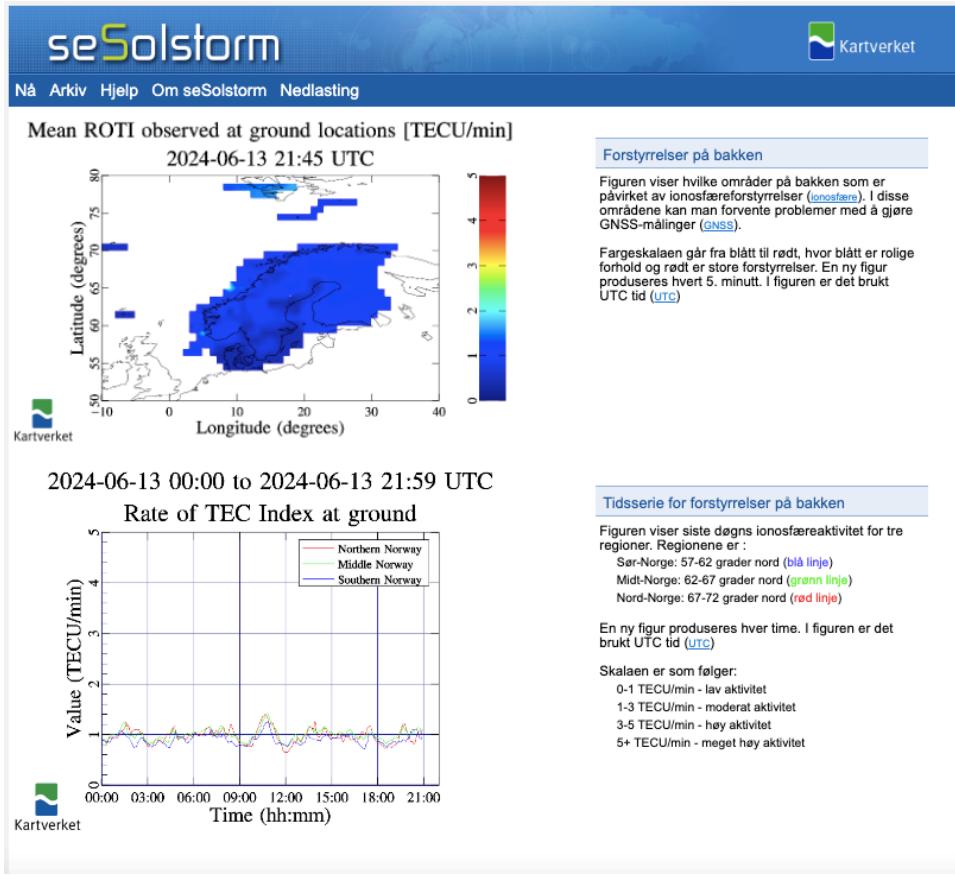

seSolstorm: Norwegian Mapping Authority / Kartverket

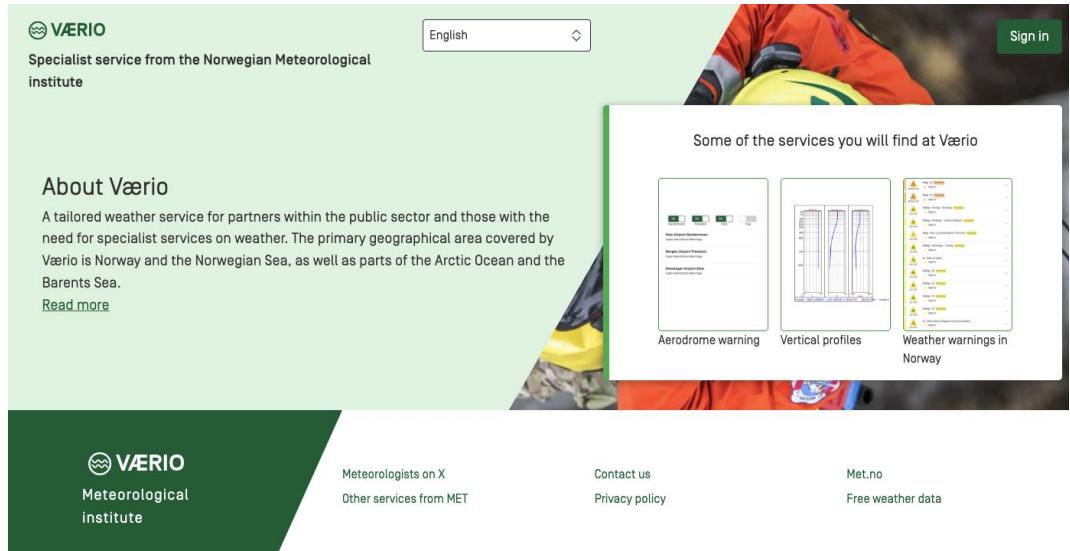

NMA is a supplier of the CPOS location service, used for mapping and surveying, in construction machinery, in the mining industry, in agriculture and forestry, nautical mapping (mm precision). 160 base stations in Norway.

The seSolstorm (“see the solar storm”) is an additional service that gives an overview of ionospheric conditions (ROTI and ROT) over Fennoscandia. Collaboration with Denmark, Finland, Sweden.

Værio.no portal has now a possibility of including space weather data from third parties in the specialised in the specialist service. e.g. GOES, magnetometer data, foF2 data, aurora forecast etc.

Description of consequences and level or risk.

The screenshot shows the Værio website homepage. At the top, there's a header with the Værio logo, a language selector set to English, and a 'Sign in' button. Below the header, a large banner features a person in a flight suit holding a yellow and blue device. To the right of the banner, a box titled 'Some of the services you will find at Værio' lists three services: 'Aerodrome warning', 'Vertical profiles', and 'Weather warnings in Norway'. Underneath the banner, there's a section titled 'About Værio' with a brief description of the service and a 'Read more' link. At the bottom of the page, there's a dark green footer bar with the Værio logo, the text 'Meteorological institute', and links to 'Meteorologists on X', 'Other services from MET', 'Contact us', 'Privacy policy', 'Met.no', and 'Free weather data'.

Contribution to ESA Space Weather Portal

Norwegian Mapping Authority (NMA):
ionosphere monitoring.

Tromsø Geophysical Observatory:
magnetometer data to several products
related to Northern Europe.

University of Oslo, NMA, GMV: nowcasting
and forecasting ionospheric conditions
related to scintillations (to be deployed).

University of Bergen: contribution to
Geomagnetic Expert Service Centre.

The screenshot displays the ESA Space Weather Service Network portal. At the top, there's a header with the European Space Agency logo and a navigation bar. Below the header, a main title "Welcome to the ESA Space Weather Service Network" is followed by a note: "Please note that all ESA-SWE Services are under review/construction". The page is divided into several sections:

- Welcome to the ESA Space Weather Service Network**: A brief introduction to the dashboard.
- Interplanetary medium**: Includes "Near-Earth solar wind forecasts" (EUHFORIA) with a plot of Total Electron Content (TEC) and a "Full product" button.
- Earth's Ionosphere and Thermosphere**: Includes a "TEC map (Europe), current" map showing TEC values across Europe, a "Full product" button, and a note from the German Aerospace Center.
- Latest HESPERIA UMASEP-500 forecast**: A plot showing the latest forecast for the HESPERIA UMASEP-500 instrument, with a "Full product" button.
- Earth's Atmosphere and Geomagnetic Environment**: Includes a "Forecasts of dB/dt" section with a map of Europe and a note about the forecast issued on 2024-06-13 at 22:24 UTC.

At the bottom of the page, a footer states: "SWE Portal [3.10], Copyright 2000 - 2024 © European Space Agency. All rights reserved."

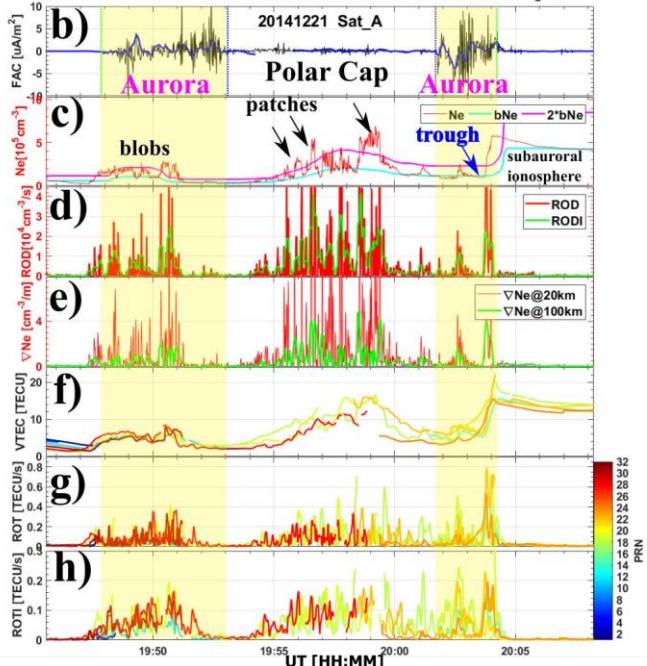

Other developments and actions

Development of data products and models.

Prototypes for forecasts of ionospheric irregularities: Swan, Forswar (ESA funded projects).

Local and global models for ionospheric variability based on satellite data and controlled by geophysical proxies (e.g., Swarm-VIP models), magnetic field, global models for ionospheric currents: Average Magnetic Field and Polar Current System (AMPS).

Maintanence of networks of instruments: University of Bergen (GISTM), University of Oslo (GISTM and All Sky Cameras) and others.

 **swarm** Data, Innovation, and Science Cluster

Data product example:
IPIR: Ionospheric Plasma Irregularities by Swarm

Consolidating the community towards developing a national 24/7 capacity in space weather alerts, alerting lines, and response.

Main actors have now formed a committee to establish the integrated National Space Weather Forecasting service.
