iGMAS Monitoring &
Assessment Results

iGMAS Construction

iGMAS & IGMA

- In March 2011, China first proposed the concept of international GNSS Monitoring and Assessment System (iGMAS).
- In June 2011, China proposed international GNSS Monitoring and Assessment services at the ICG conference in Vienna.
- In September 2011, at ICG-6, “*International GNSS Monitoring and Assessment*” (IGMA) sub-working group, co-chaired by China, IGS and Japan was set up, with its objective and tasks to promote international GNSS monitoring and assessment activities.

**international GNSS Monitoring
and Assessment System**

iGMAS Construction

iGMAS Objectives

- To establish a global real-time tracking network, which could track the whole orbits of BDS, GPS, GLONASS and Galileo satellites, as well as to be used as a platform with data collection, storage, analysis, management, publishing abilities.
- To monitor and assess the GNSS operational status and key indicators, generate precise ephemeris, earth orientation parameters, station coordinates and speed, global ionospheric delay and GNSS integrity to support satellite navigation technology testing, monitoring and assessment services in scientific research and various applications.

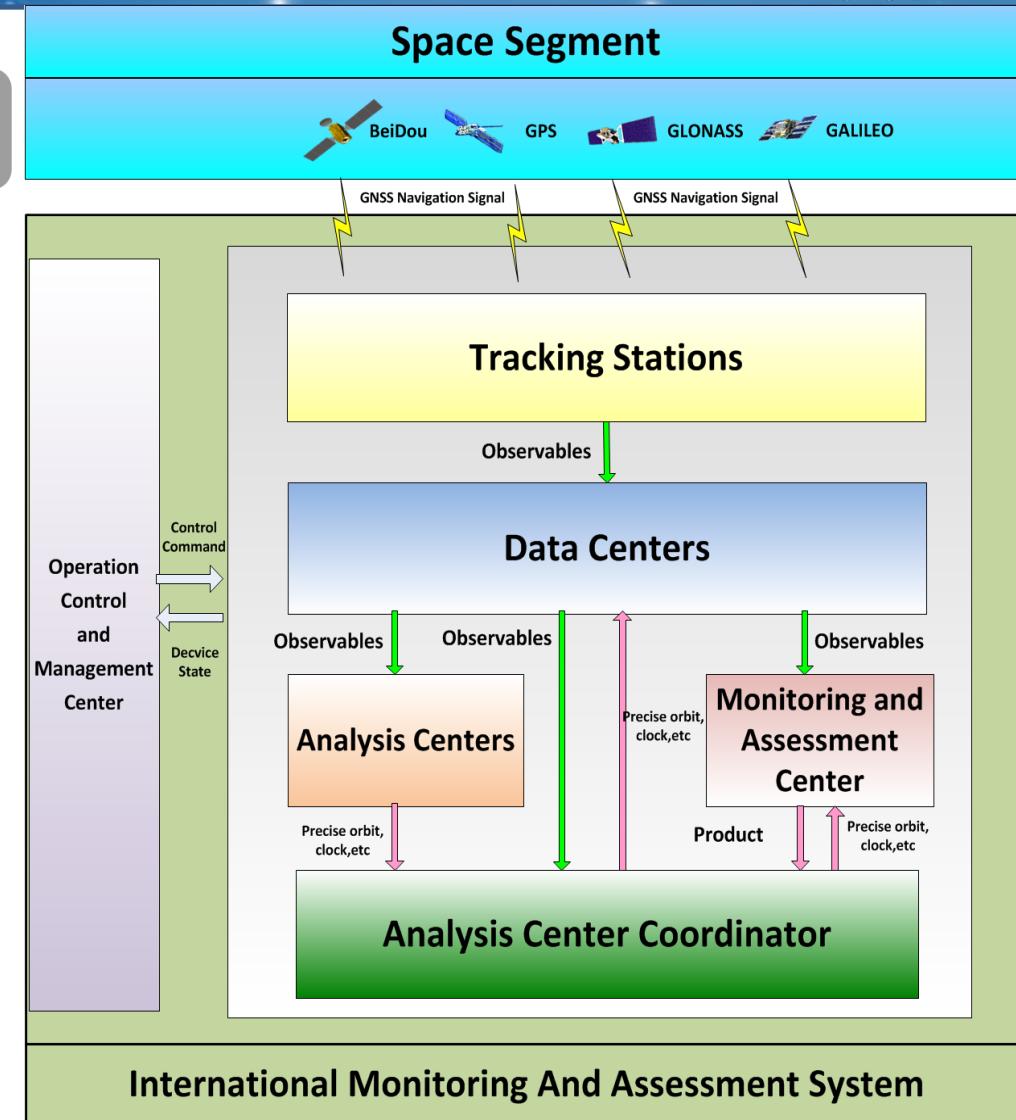

iGMAS Construction

System Components

- 34+ monitoring/tracking stations;
- 3 data centers;
- 8 analysis centers;
- 1 monitoring and assessment center;
- 1 product integration and service center;
- 1 operational control and management center.

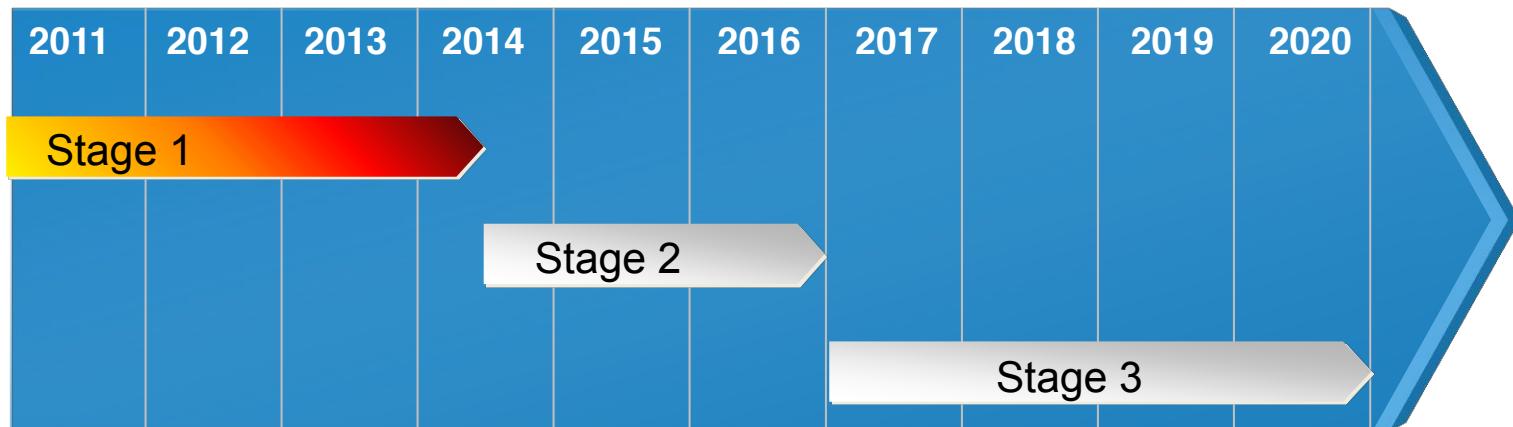

iGMAS Construction

Procedure

- Stage 1: During 2011-2014, 20 monitoring stations, 2 data centers, 5 analysis centers, 1 monitoring and assessment center, 1 product integration and service center, 1 operational control and management center have been established.

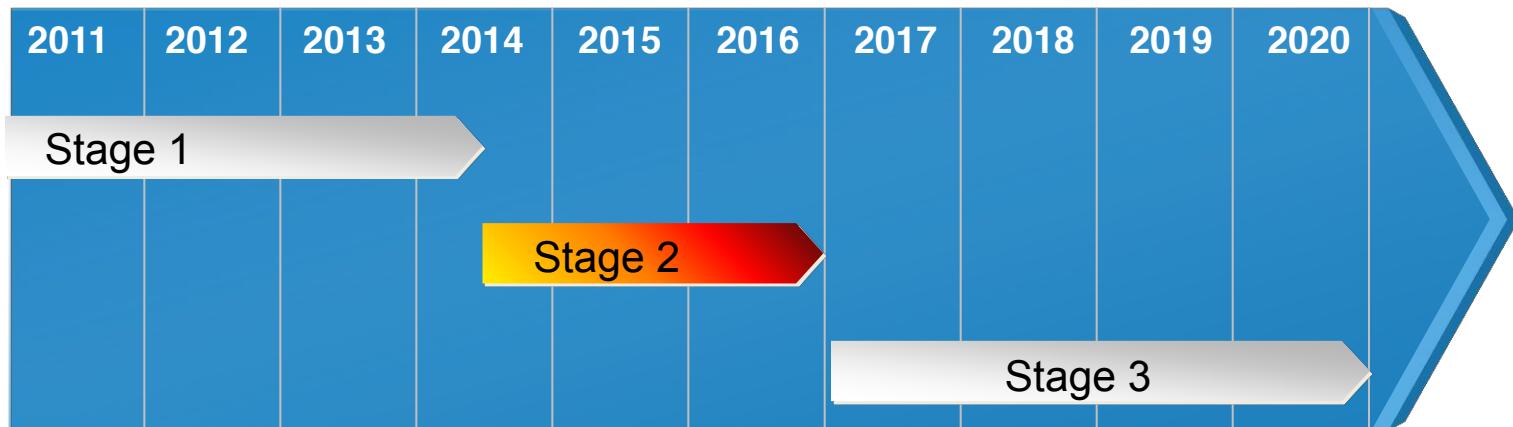

iGMAS Construction

- Stage 2: in 2014-2016, add more system components including 10 monitoring stations, 1 data center, 2 analysis centers, and update the system for enhanced processing capability.

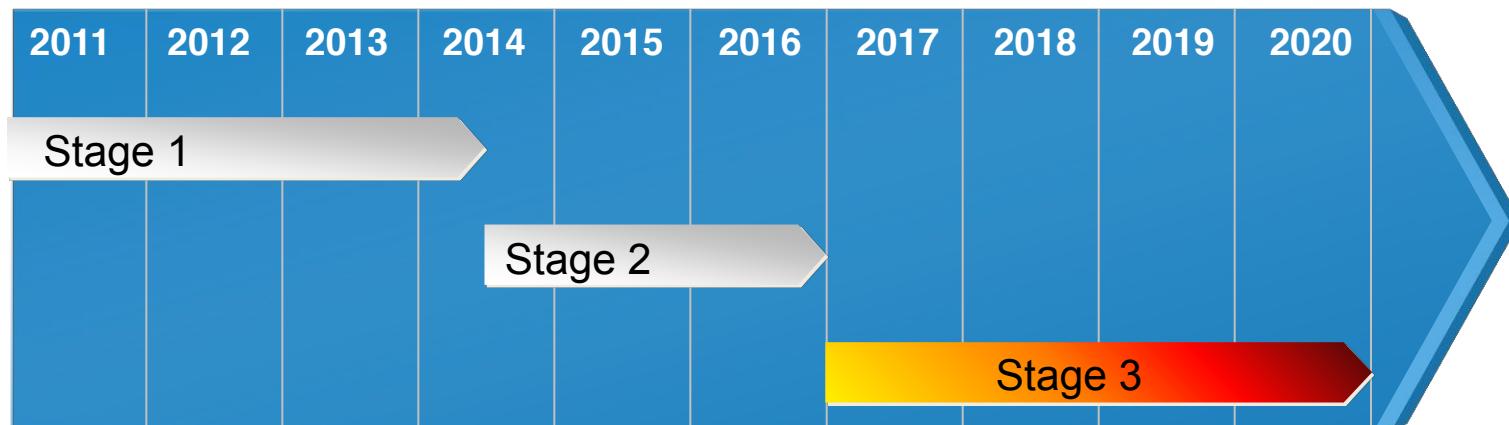

iGMAS Construction

- Stage 3: 2016-2020, update system to possess processing capability for the next generation of BDS and other GNSS systems.

iGMAS Construction

Milestones

- 2007/09, initial concept study of iGMAS;
- 2010/08, requirements analysis;
- 2011/03, iGMAS formal proposal;
- 2012/12, iGMAS project approval;
- 2013/05, start of iGMAS construction;
- 2014/01, start of integration testing;
- 2014/07, start of trial operation.

iGMAS Construction

GNSS Receivers

- R&D and production of multi-GNSS receivers by Unicore, CETC 54 and CETC 20 was finished.

Unicore

CETC54

CETC20

iGMAS Construction

Monitoring Stations

- Construction of 8 domestic stations have been completed, receiver equipments have been installed.

Beijing

LASA

Urumqi

Changchun

Kunming

Shanghai

Wuhan

Xi'an

iGMAS Construction

- Constructions of the Arctic and Antarctic stations have been completed.
- Stations in Pakistan, Brazil, Argentina and Canada have been equipped with receiver and network equipment.

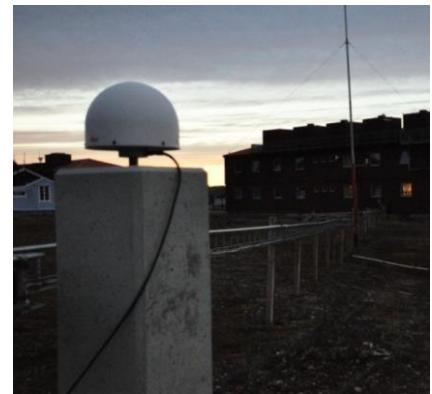

Canada

Argentina

Pakistan

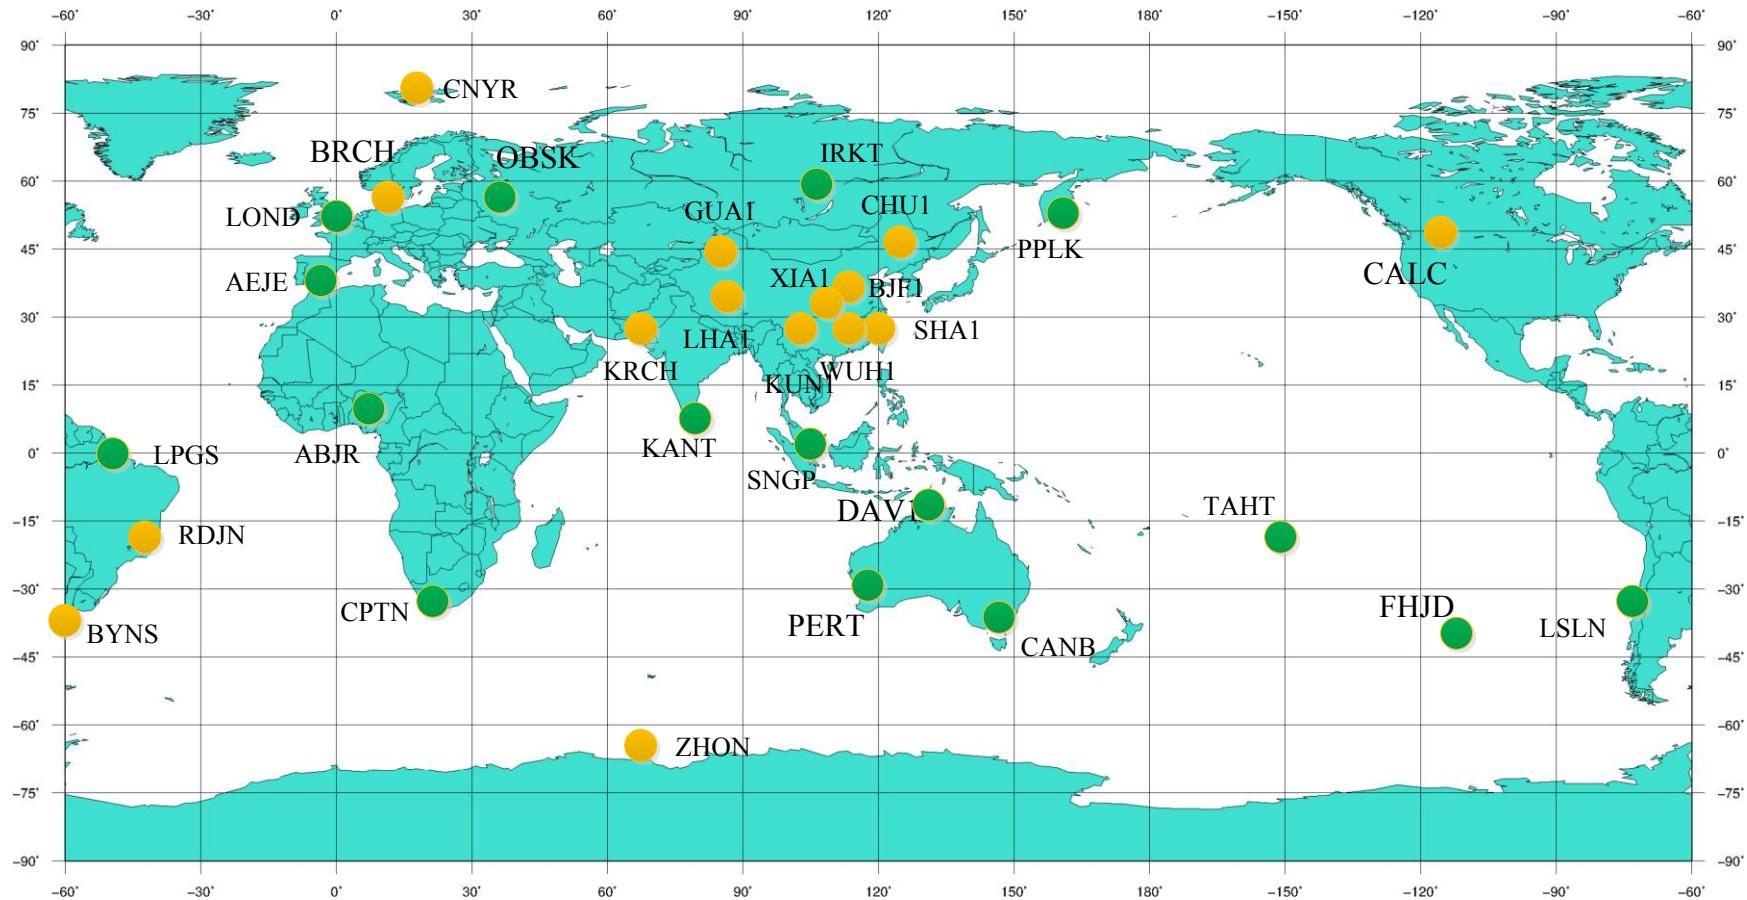

Brazil

iGMAS Construction

- Stations in Russia, Australia, England and South Africa are in progress.

iGMAS Construction

Signal monitoring stations

- In April 2009, a 7.3m antenna started to work in Xi'an;
- In October 2014, a 40m antenna was put into service in Xi'an;
- International cooperation with Canada, Malaysia and Argentina for signal quality monitoring and assessment has been established.

iGMAS Construction

Center Construction

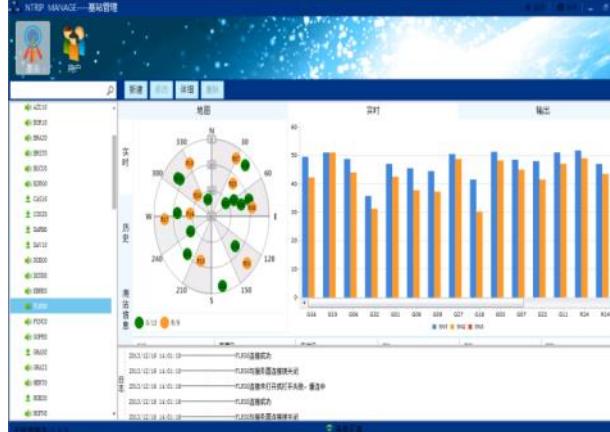

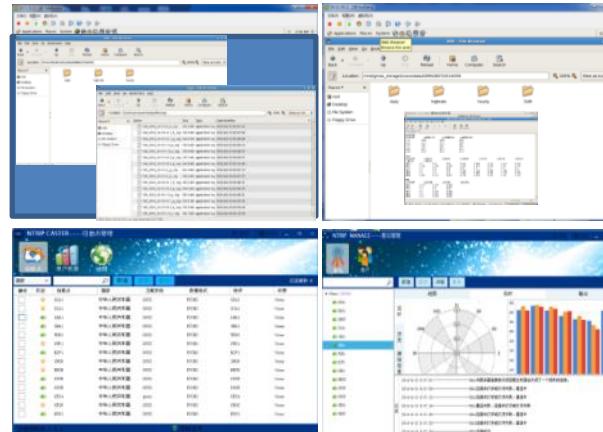

- 3 data centers have finished the internal integration testing;
- 10 analysis centers have finished internal integration testing;
- Monitoring and assessment center, operational control and management center, product integration and service center have finished internal integration testing;
- iGMAS has started trial running since July, 2014.

Summary

- iGMAS is an international GNSS monitoring and assessment system built by China under the ICG IGMA initiative.
- iGMAS has been operational on trial basis since July 2014, providing the users with raw observation data, basic products as well as monitoring and assessment information.
- iGMAS welcomes the participation from the international GNSS society.

Thanks!

谢谢！
