

Applications of high-precision GNSS solutions in the economy

United Nations

Eleventh Meeting of the International Committee on Global Navigation Satellite Systems (ICG-11) and the 17th Meeting of the Providers' Forum,

6 – 11 November 2016, Sochi, Russian Federation

Experts Seminar on Applications, 07 November 2016.

GNSS Application Sphere

The next level of mass service – precision positioning
The development of ground infrastructure of high-precision navigation system

GNSS Application Sphere

GNSS TECHNOLOGIES ON TRANSPORT

Including :

Monitoring municipal, special transports

Traffic Monitoring, overcharge

Control of modes of working and rest of drivers

transportation of passengers

transportation of dangerous goods

heavy lift

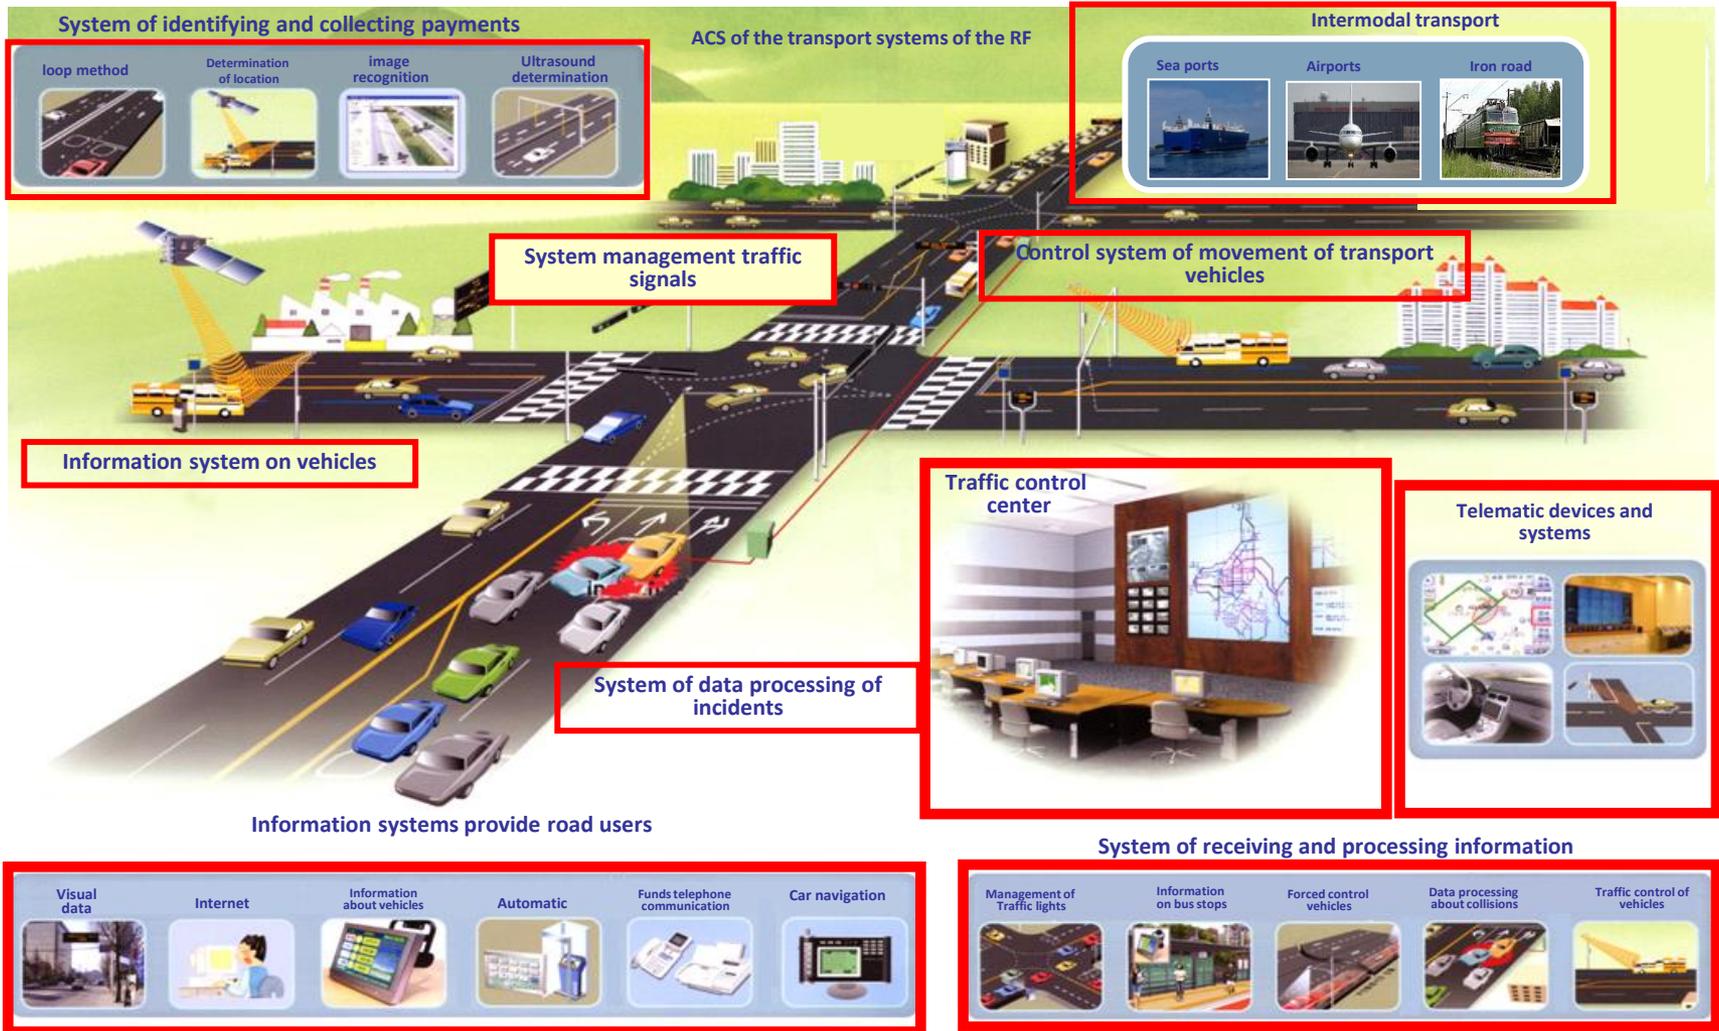

system of toll roads

tachographs with GNSS technologies

GNSS Application Sphere

Intelligent Transport Systems

Increasing informational content coordinate and time providing rolling stock

High-precision monitoring of objects of transport infrastructure, keeping and creating united digital cartographical basis

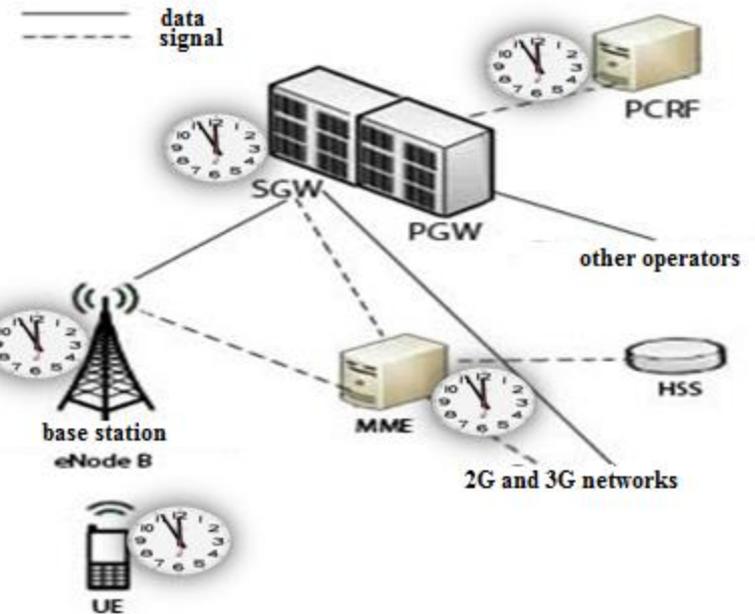

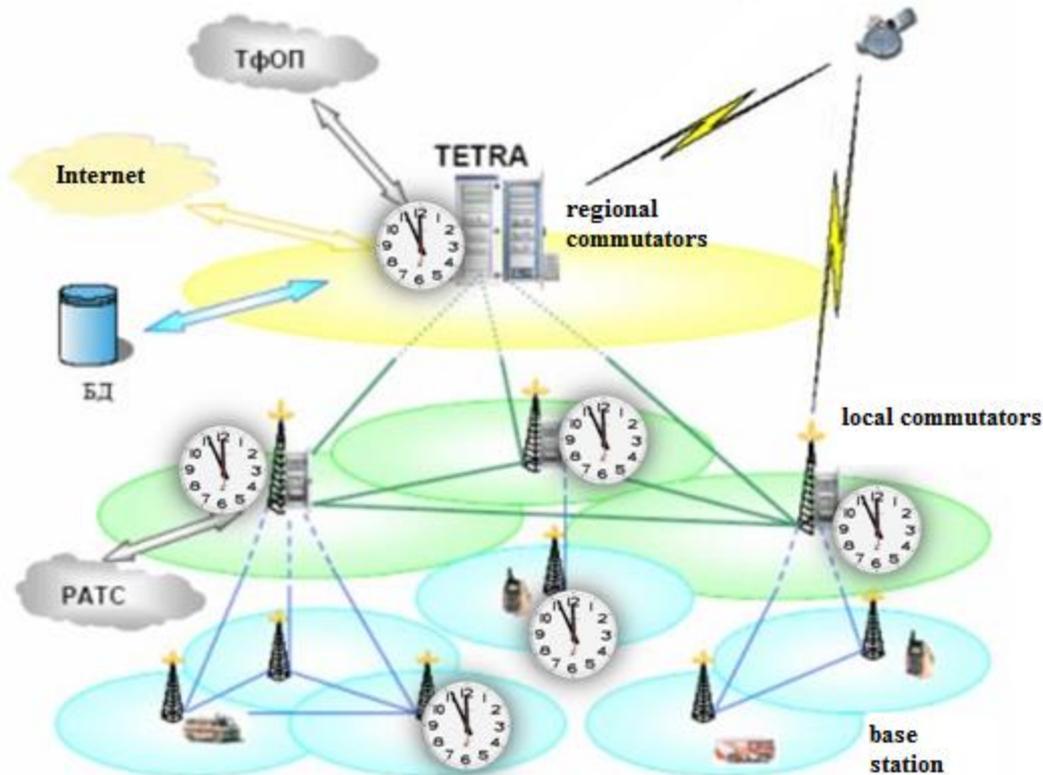

GNSS Application Sphere

Synchronization of communications networks

Structure of a cellular network of the standard 4G (LTE)

GNSS Application Sphere

Precision agriculture. Mining.

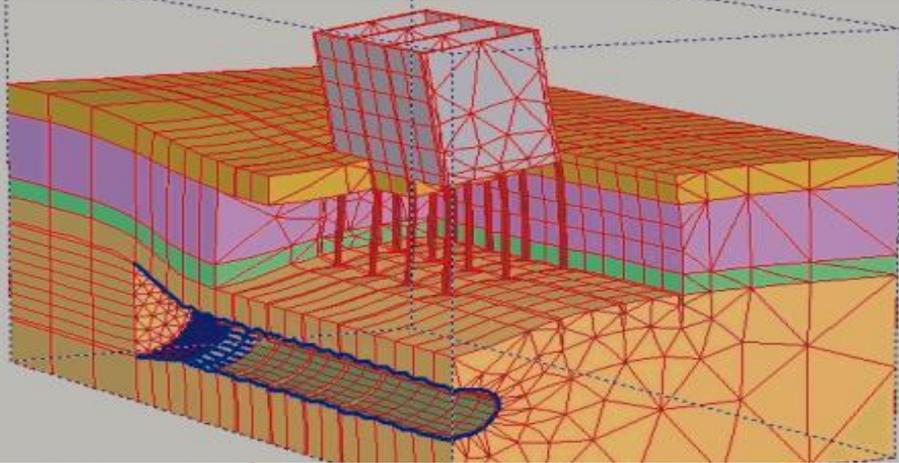

RTK is the main open cut mining GNSS technology

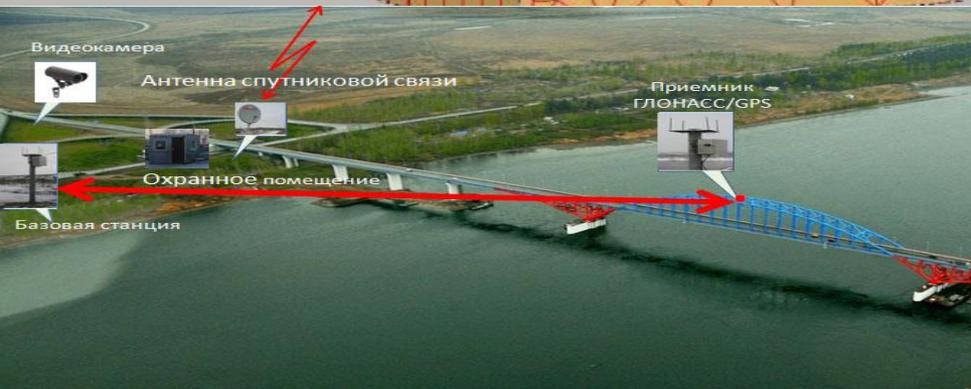

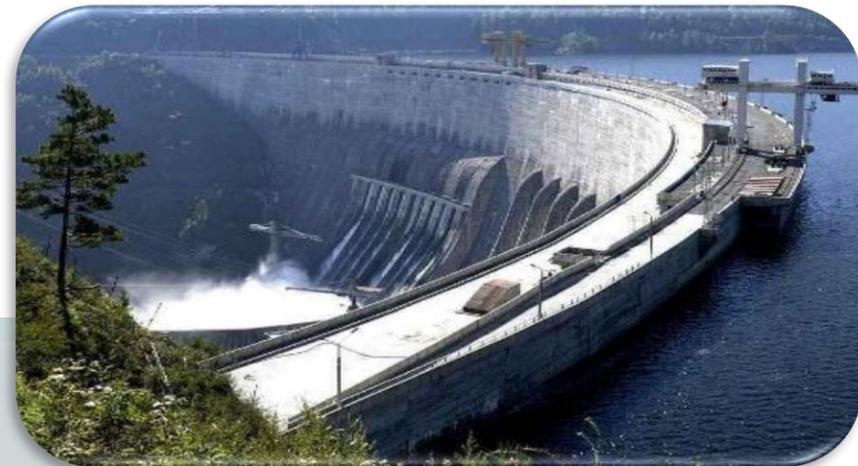

-Precision agriculture develops intensively in private sector using local differential networks, precision steering systems can now run on commercial market.

GNSS Application Sphere

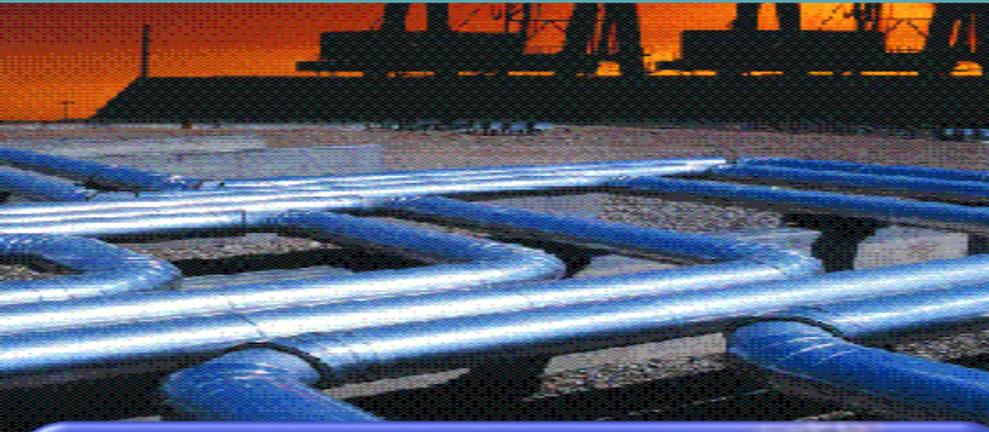

GNSS monitoring systems of buildings, bridges, dams - Precision control system using local reference systems, data transmission systems, software analysis for decision making

Unnoticed in time deformation of the construction may result into cracks and its subsequent collapse

GNSS Application Sphere

Direction of commercial high-precision applications of GNSS technology and equipment :

-monitoring of ground infrastructures, oil and gas pipelines, geophysical survey and other work on the continental shelf

-machine control - road construction with centimeter accuracy, using technology and real-time reference stations, digital maps

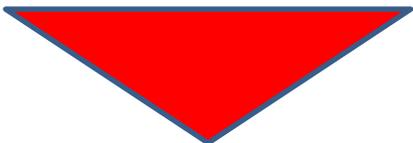

Since the late 80s commercial satellite equipment and technology for maritime and ground navigation, survey. Maritime and aviation application were under IMO and ICAO requirements and regulations.

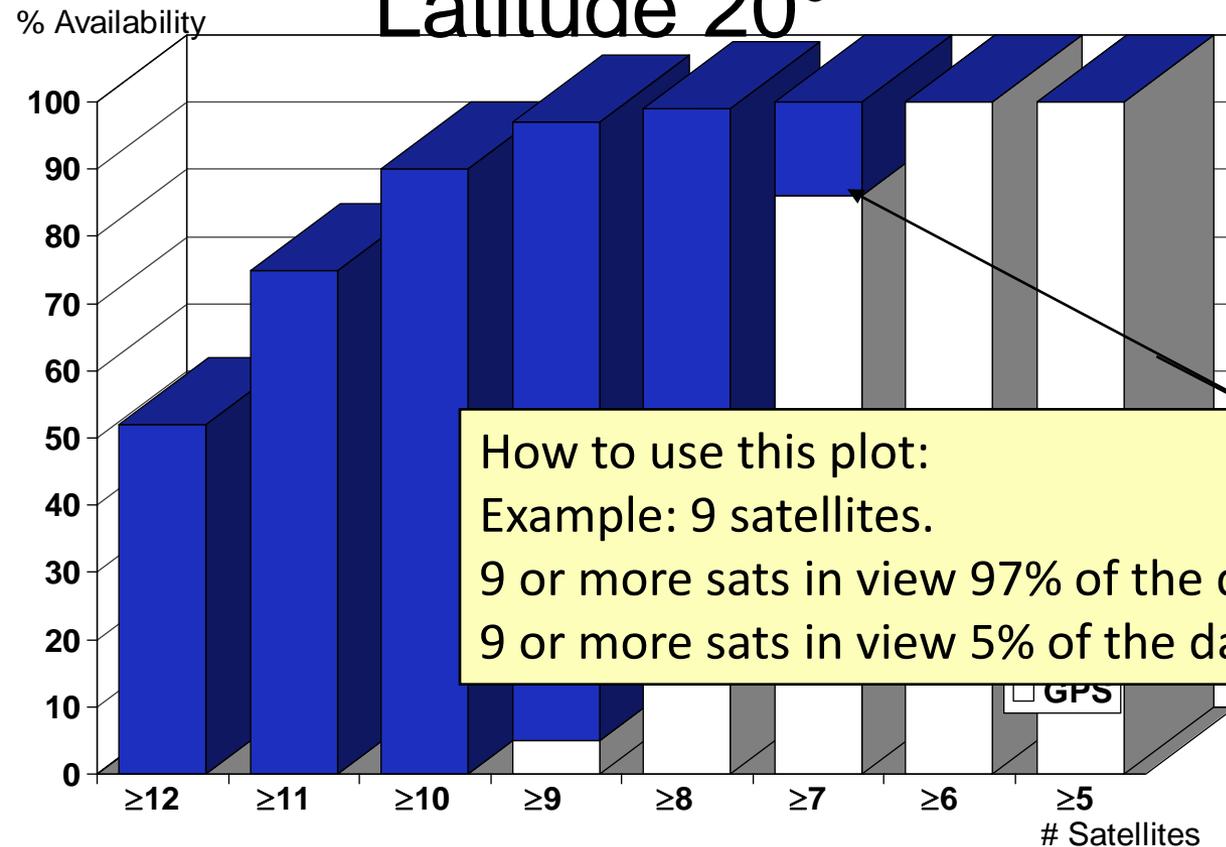

Commercial application of precision technology and equipment were first of all in survey, cadastre, land and ground infrastructure inventory. The major sector of application were oil&gas, survey and mining.

The methods of field applications were static, pseudo kinematic.

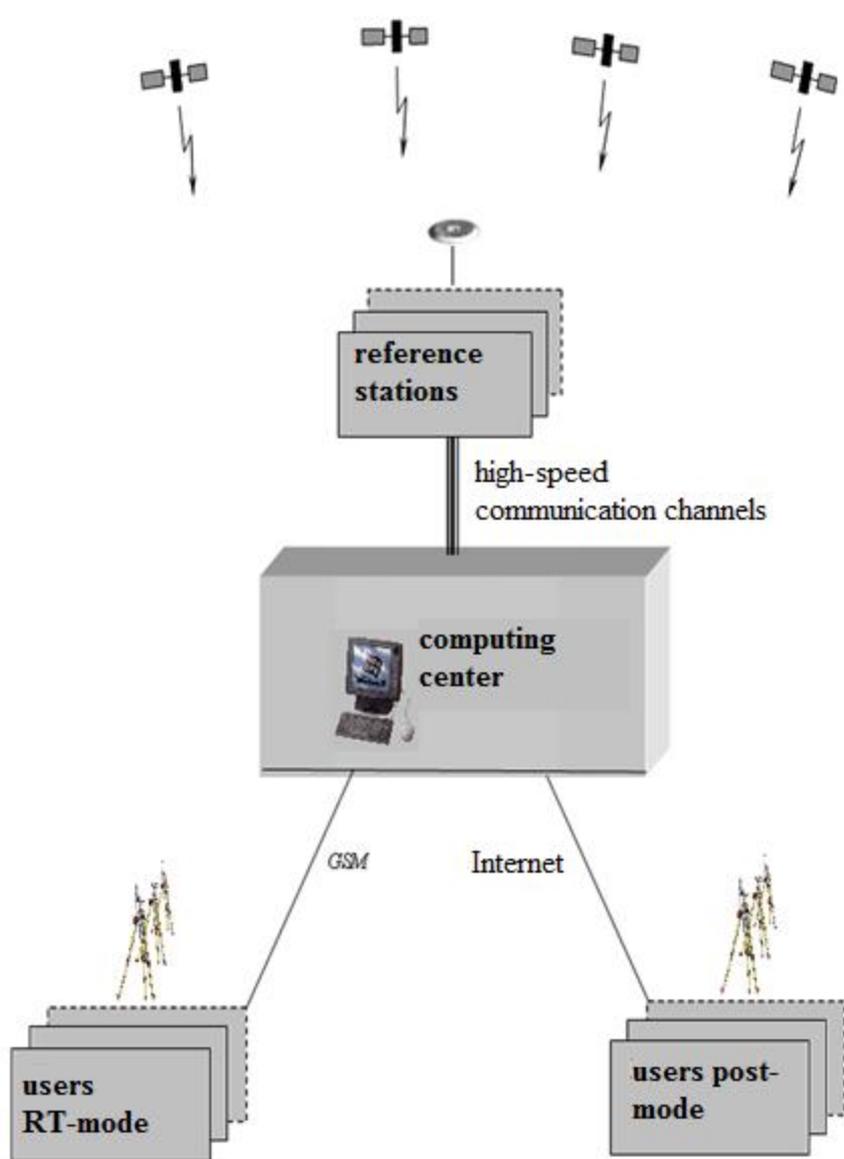

Latitude 20°

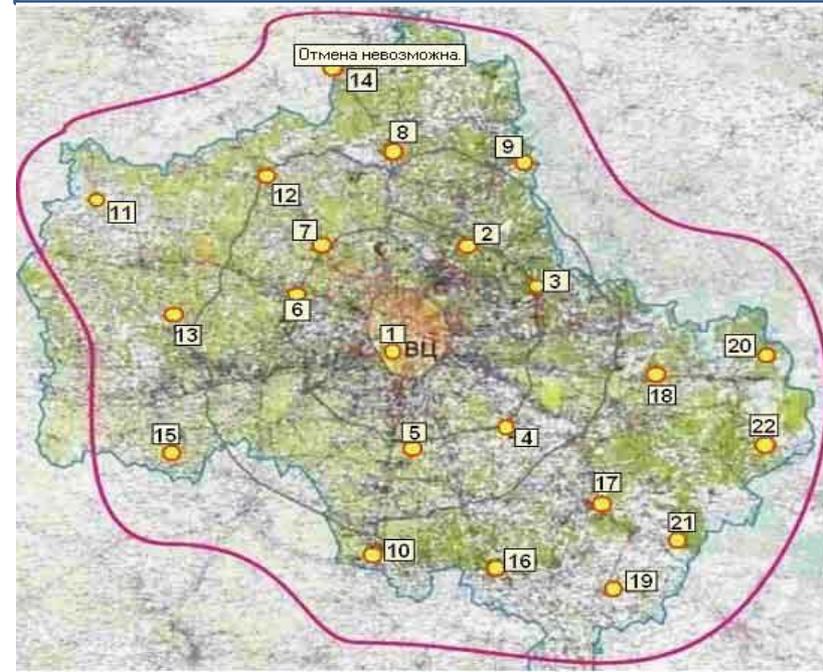

How to use this plot:
Example: 9 satellites.
9 or more sats in view 97% of the day, with GPS+GLONASS
9 or more sats in view 5% of the day, with GPS-only

Almanac from 9/15/97. 25 Healthy GPS Sats, 40 Healthy GPS+GLONASS Sats
8 Day simulation, 10 degree mask angle.

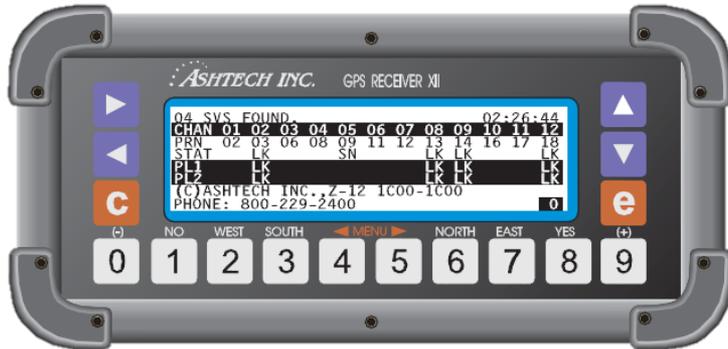

The next step was
 Development, improvement of technology
 equipment for commercial application
 - RTK-kinematics in real time,
 kinematics with moving base
 base stations, transmission of differential
 corrections

Development of commercial (regional,
 local) reference networks for various
 applications based on GLONASS and
 GPS signals

Static, Pseudo-Kinematic Survey Accuracy:

5 mm + 1 ppm

NovAtel PwrPak7

2016

3 mm + 0.5 ppm

Multi – GNSS

- **More Satellites**
- **Improved PPP convergence**
- **More pierce points for atmospheric sounding**
- **Decorrelation of height, clock, troposphere**
- **Improved Signals**
- **Less multipath**
- **Increased robustness (scintillation, weak signals)**
- **Stable clocks**
- **Improved Real-time PPP**
- **Orbit improvement / prediction**
- **Diversity**
- **Different orbital periods and commensurabilities**
- **Decorrelation of estimated parameters (orbits, Earth rotation)**

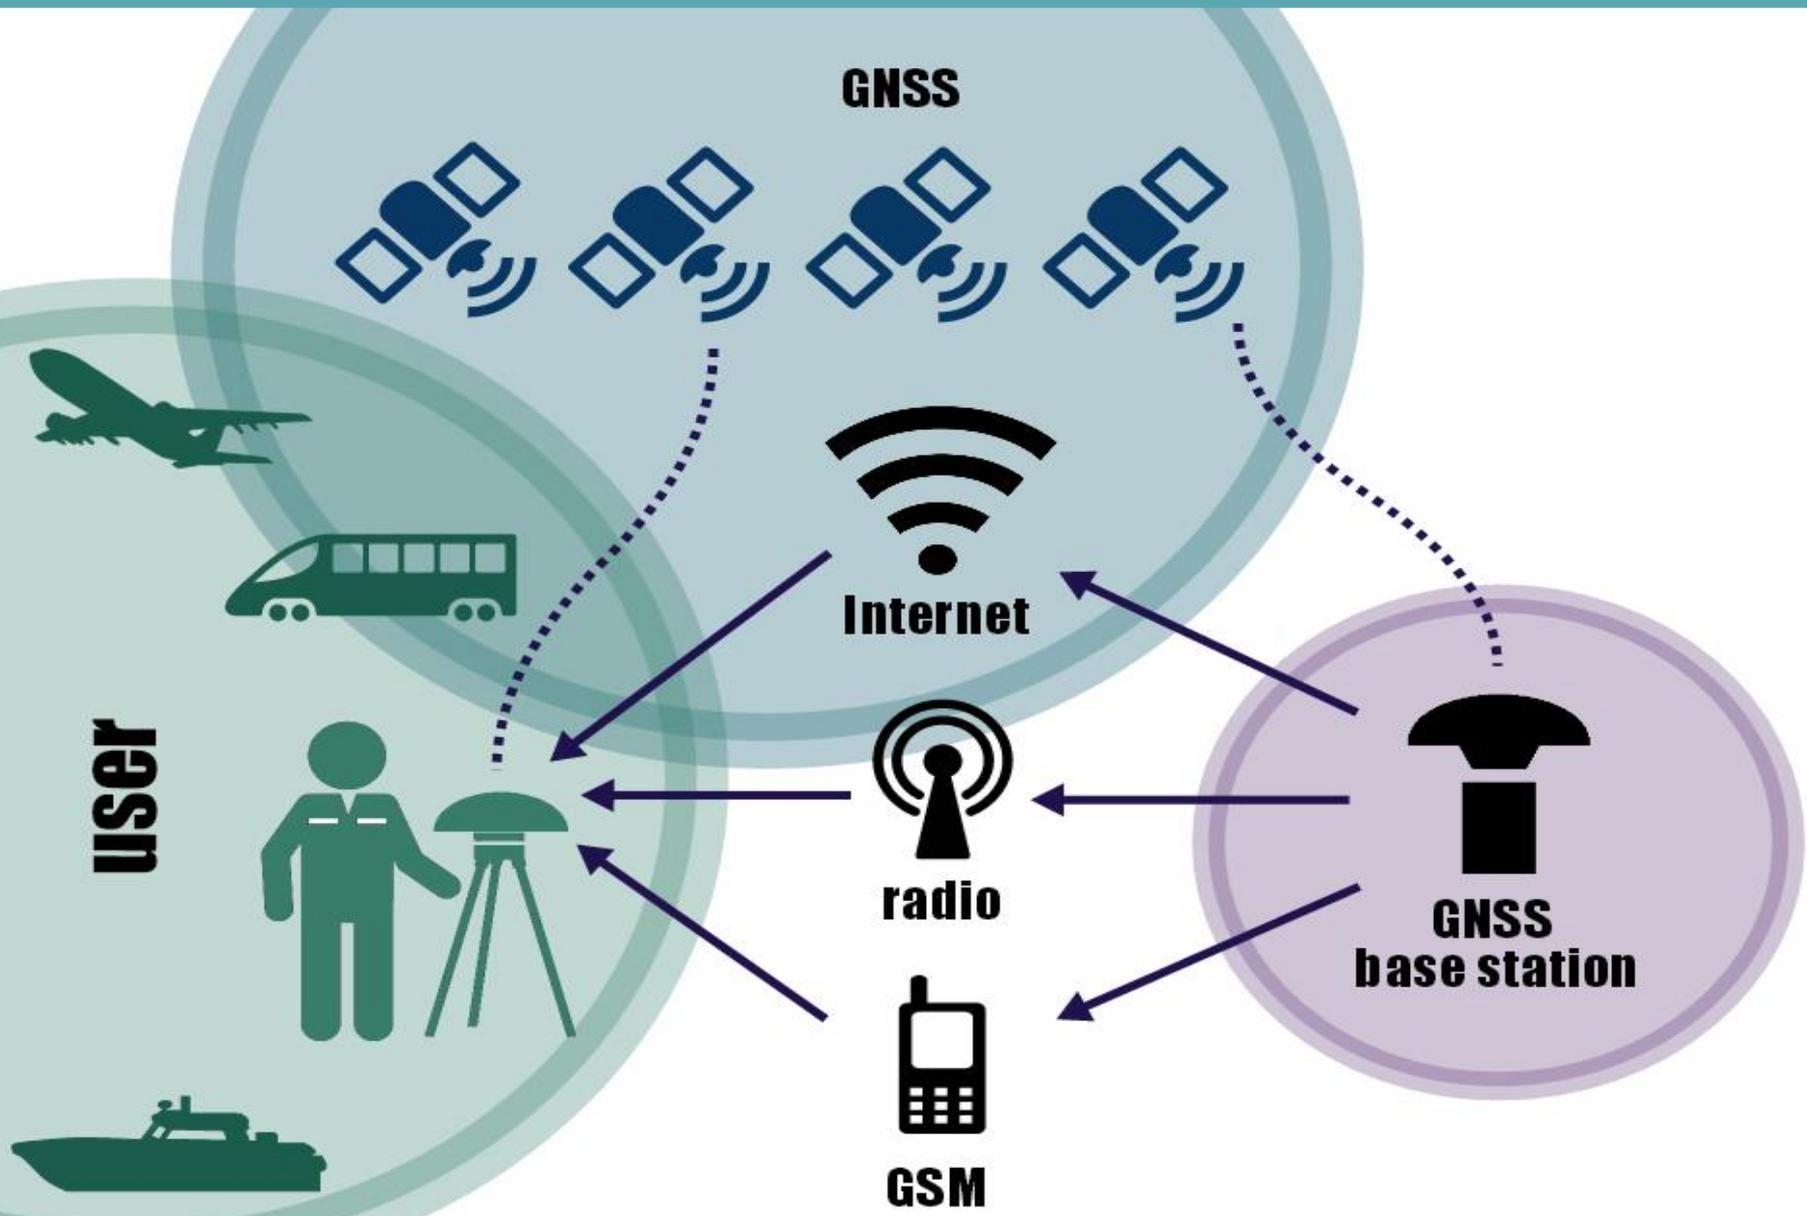

G. Beutler Astronomical Institute, University of Bern

IGS-RTS spurring innovation...

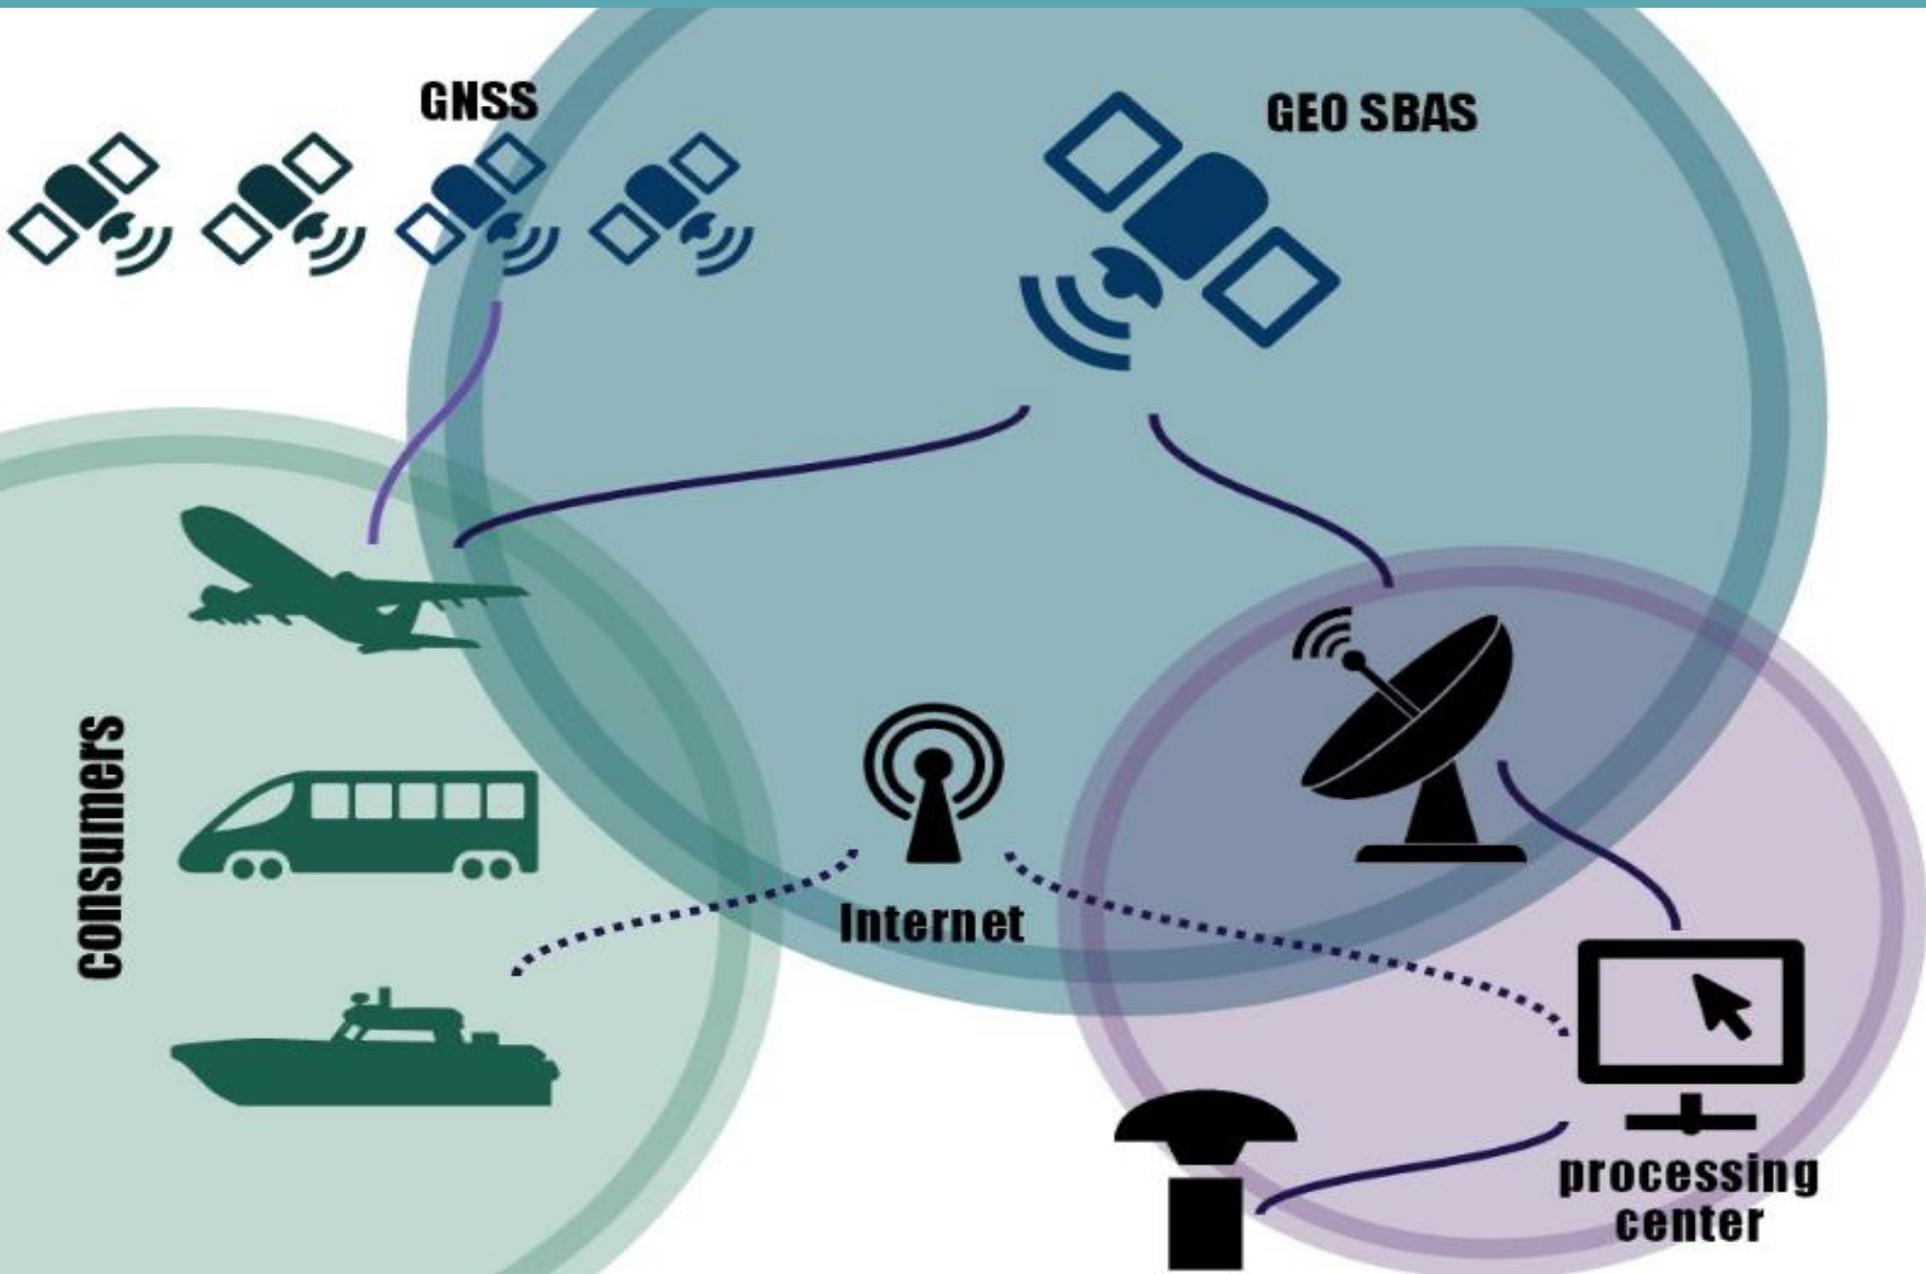

- **Geohazard... seismic displacements, tsunami prediction**
- **(Near-)real-time comparison of UTC(k)'s... time transfer**
- **IGMA parameter estimation... orbits, clocks, etc**
- **Atmospheric remote sensing, meteorology**
- **Precise orbit determination**
- **Geodesy, datum studies/monitoring, kinematic positioning**
- **Buoys, wave height measuring, hydrography**
- **Surveying, mapping, UAV platforms, agriculture, etc**
- **Performance statistics... intercomparisons, RTK v PPP v SBAS**
- **Testing, demonstrations, investigations... manufacturers, academic**
- **Low-cost GNSS receiver studies**
- **Intelligent Transport System**
- **Outdoor robotics, wearables, IoT**
- **Education**

GPStation-6™

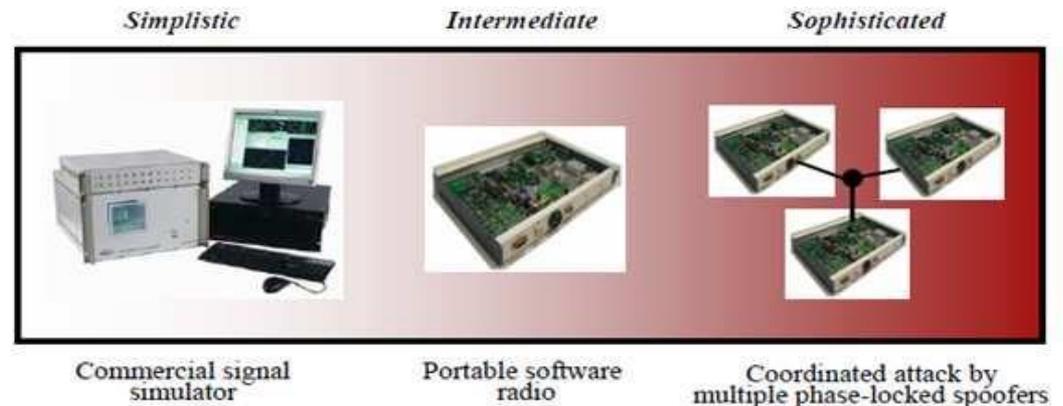

Jamming

- Denial of service attack
- Military jammers
 - “Friendly jamming”
 - Disabling of civilian GNSS while keeping military services intact
- Personal or Privacy Protection Devices (PPD)s
 - Sold over the internet starting at 30€
 - Usage is illegal in almost every country
- Motivation:
 - Turning off car anti-theft-systems
 - Bypassing pay-as-you-drive insurance
 - Withdrawing Fleet Management System
 - Protecting the privacy of parcel delivery agents from their employers

Spoofing

- Spoofing: transmission of fake GNSS signals with the intention of fooling a GNSS receiver into providing false Position, Velocity and Time (PVT)
- Different types of attacks
 - Meaconing: rebroadcasting a received signal
 - Simplistic attack
 - Intermediate attack
 - Sophisticated attack
- Spoofers exist:
 - SimSAFE from Spirent with GSS8000: >200k€

- Proof-of-concept demonstrators

Spoofing attacks

Incidents

Spoofing attacks

- Successful demonstration of spoofing attack
 - on drone
 - on Yacht
 - on time of power grid

Conclusion

- **GNSS technology market grows rapidly, infiltrating new and expanding old spheres of application;**
- **With the latest improvements of global differential correction services and PPP technology we now witness the global shifting of GNSS developments focus to wide variety of services and mobility;**
- **With the GNSS solutions integrating deeply to our everyday life, new threats emerging and become more dangerous:**
- **GNSS service is often taken for granted**
 - No real awareness of how fragile it is, despite many incidents**
 - Most professional receivers do not detect jamming or spoofing events**
 - Even though commercial jammers and spoofers are emerging**
 - Despite of existing models of ionosphere, high level of solar activities still result in TEC anomalies and scintillation effects.**

A composite image featuring a rocket launch. The rocket is shown ascending from a launch site on Earth, with a large plume of white smoke and fire at its base. The scene is set against a dark blue sky. In the foreground, the curved horizon of the Earth is visible, showing the blue and white colors of the planet's surface. The overall composition is dramatic and emphasizes space exploration.

Thank you !
