APOPHIS

Discovery

Discovered by:	Roy A. Tucker, David J. Tholen, Fabrizio Bernardi
Discovery date:	June 19, 2004

Orbital characteristics

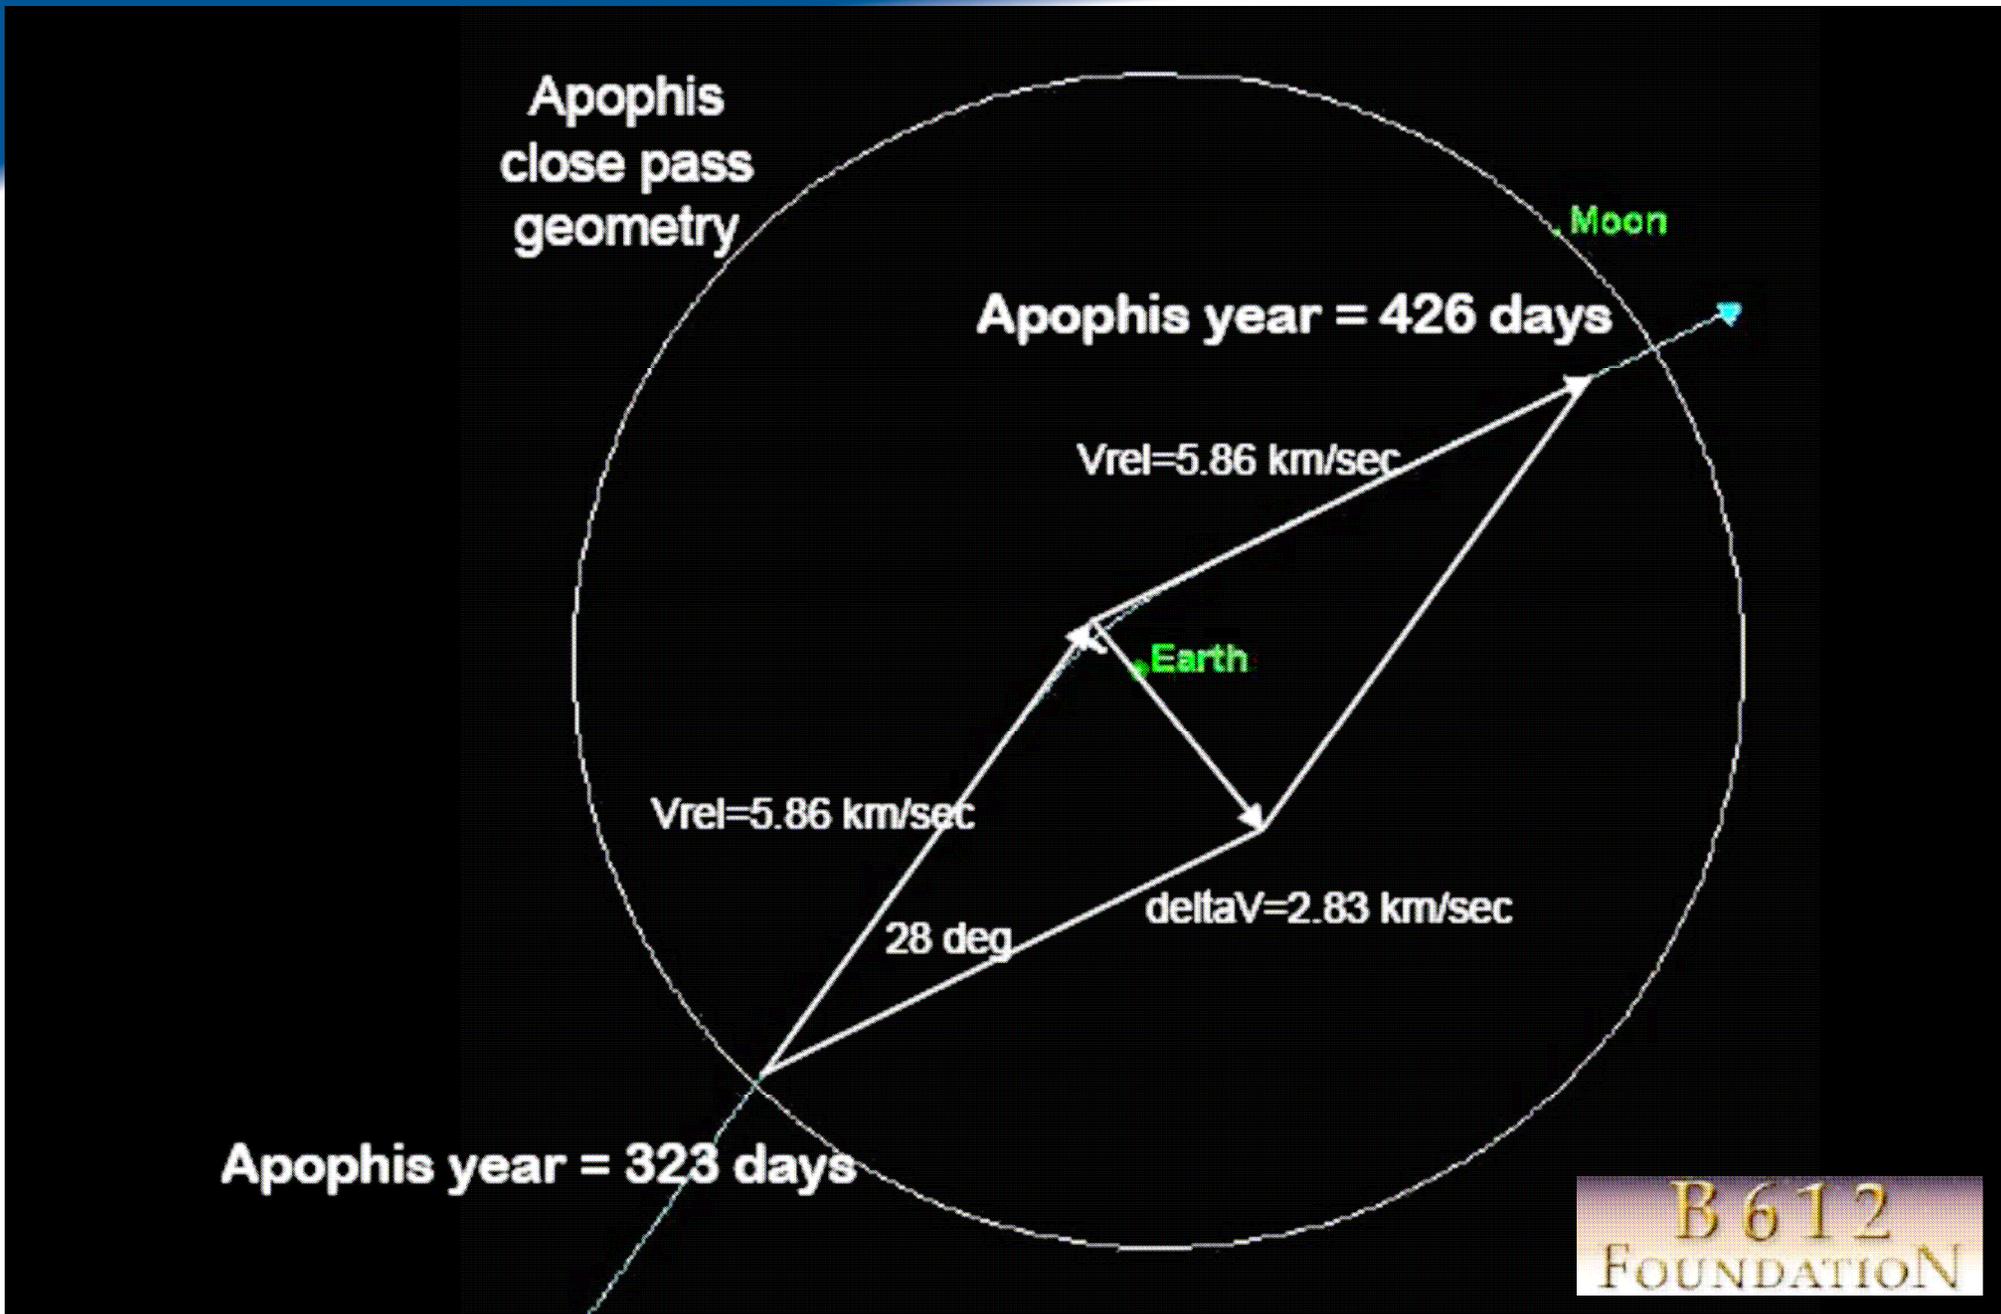

Aphelion distance:	1.099 AU
Perihelion distance:	0.746 AU
Orbital period:	323.6 d (0.89 year)
Inclination:	3.331°

Physical characteristics

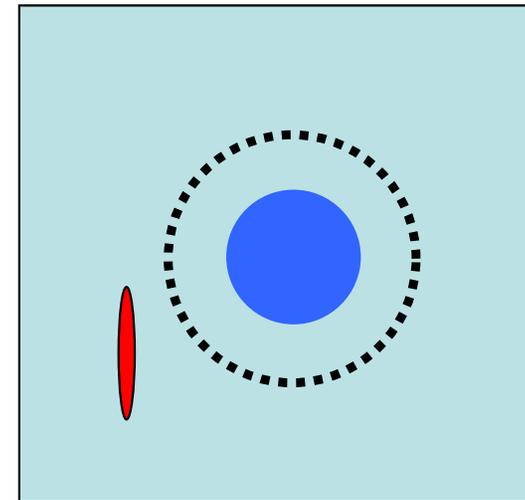

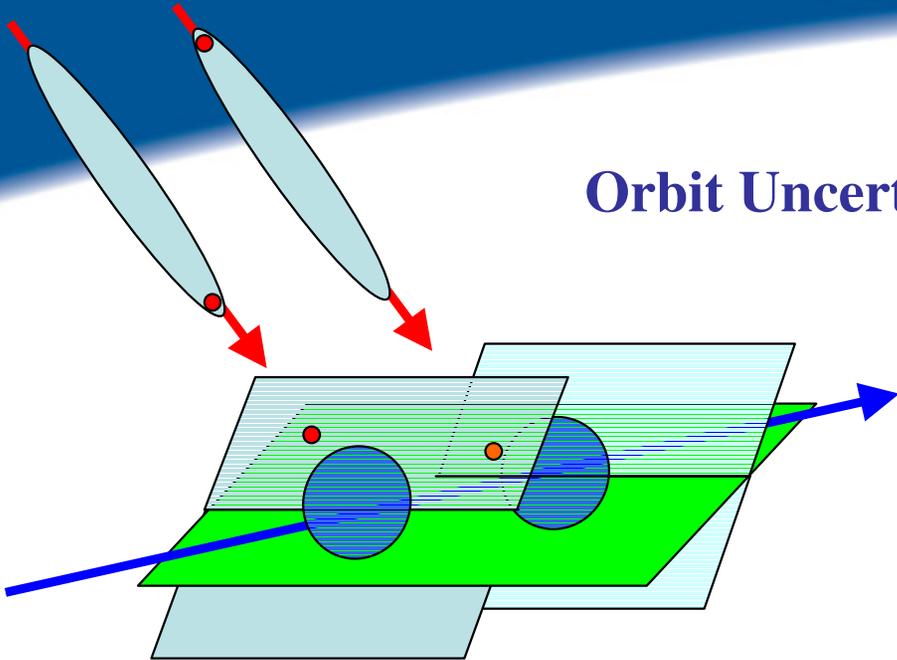

Dimensions:	~250 m (estimated)
Mass:	2×10^{10} kg (estimated)

Mass of APOPHIS ~ 200 x

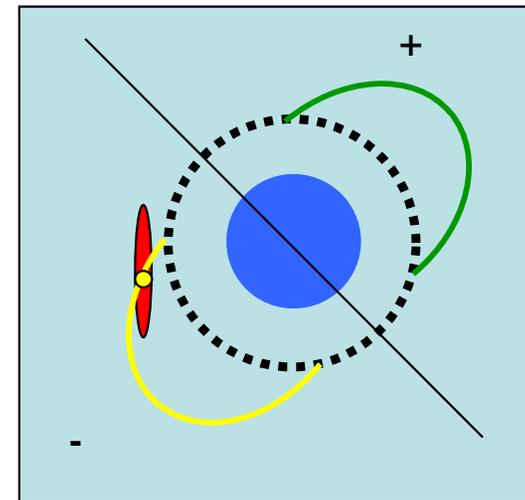

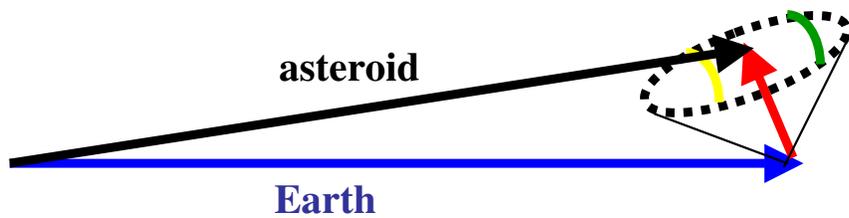

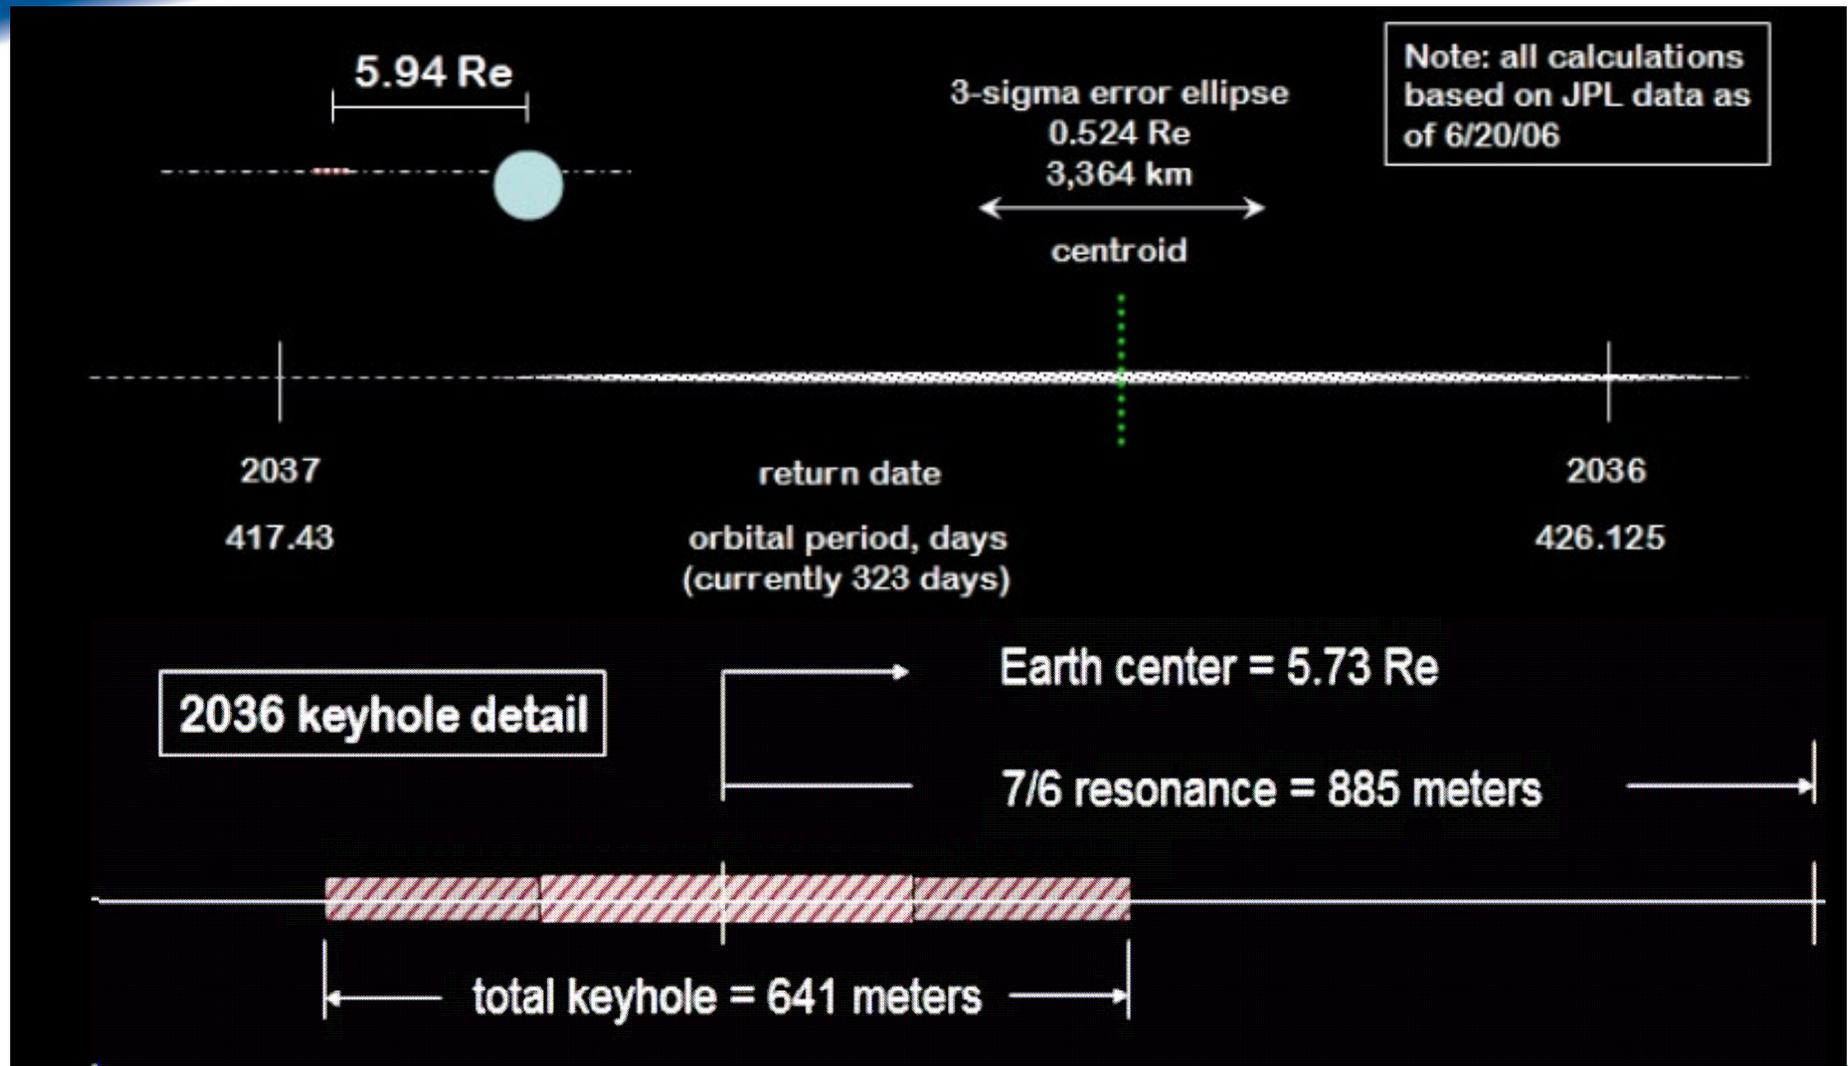

Orbit Uncertainty

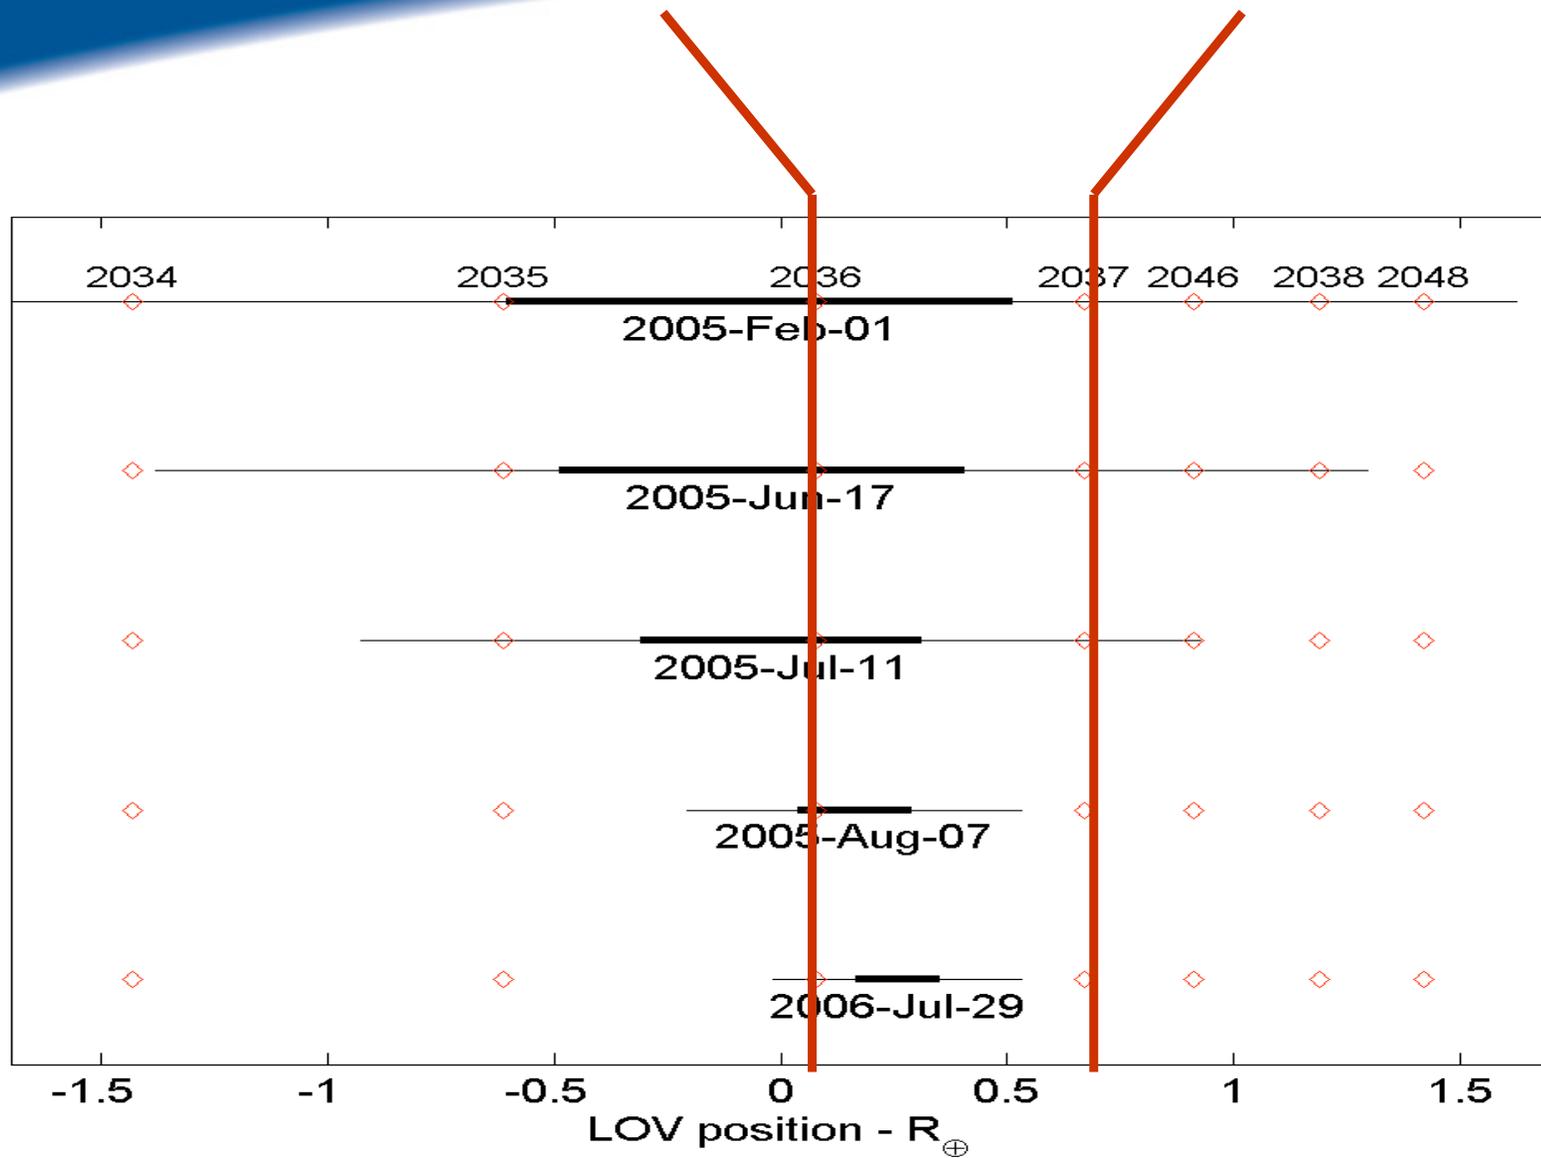

+ Earth Gravity Assist

APOPHIS Flyby of the Earth in 2029

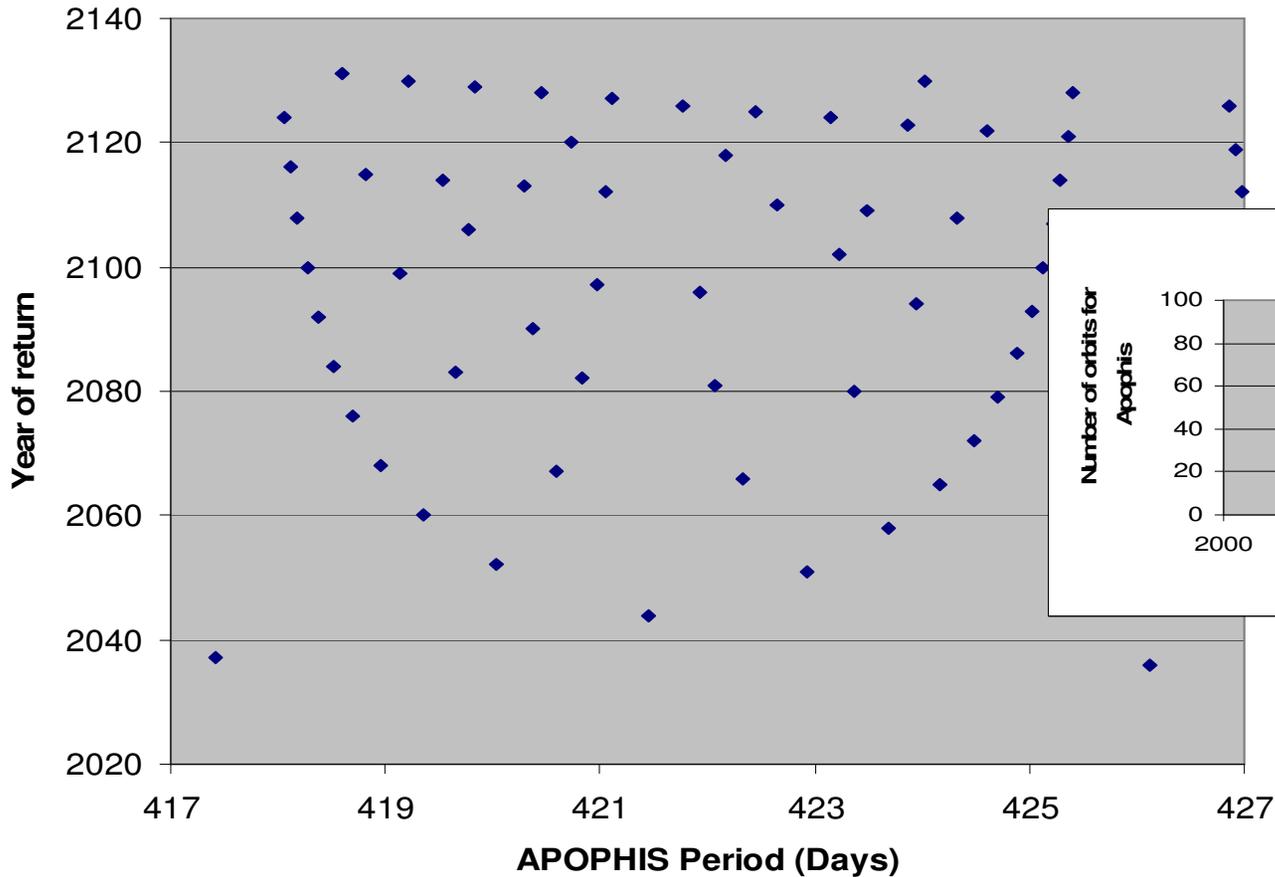

Key Holes location evolution

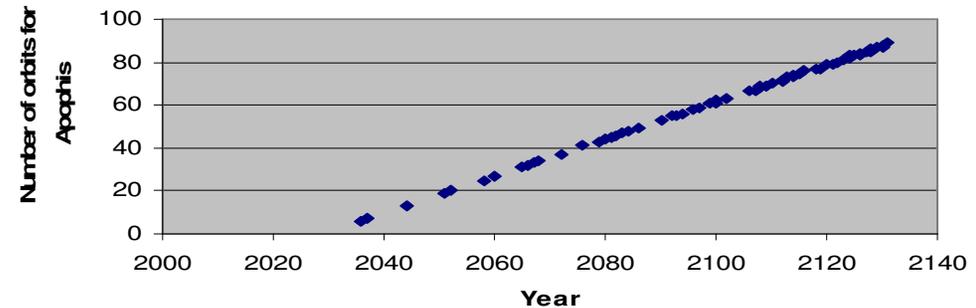

Ref: Steven R. Chesley (JPL) Potential Impact Detection for Near Earth Asteroids: the case of 99942 Apophis (2004 MN4)

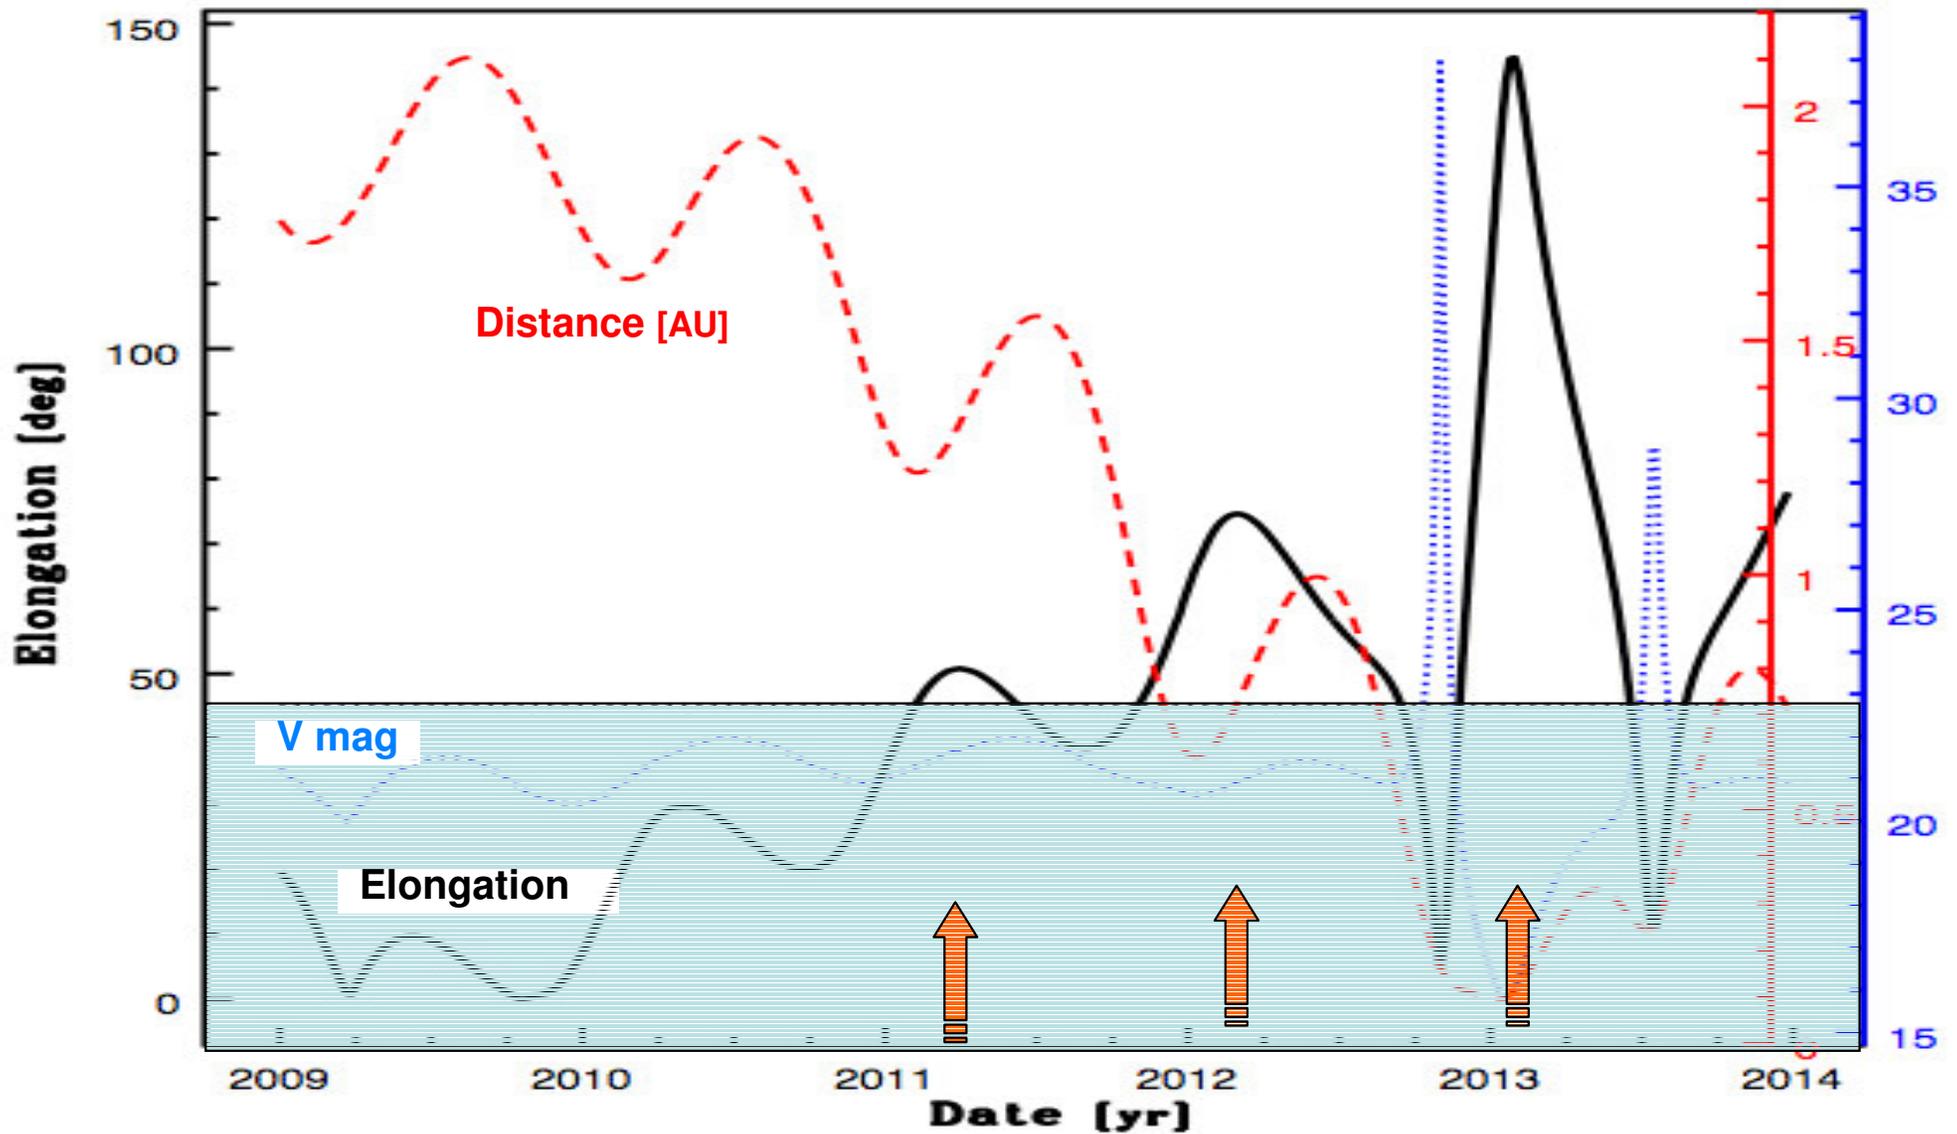

Resonant orbits up to 2130

Years with a possible impact

- Increasing number of resonant orbit with time
- About 1 / Year from '90s
- 100 KH ~0.7 km in diameter split over a 3σ uncertainty 3500 km wide
- ~ 1 in 50 chances for an impact with the Earth between 2036 and 2130

Vienna, February 2009

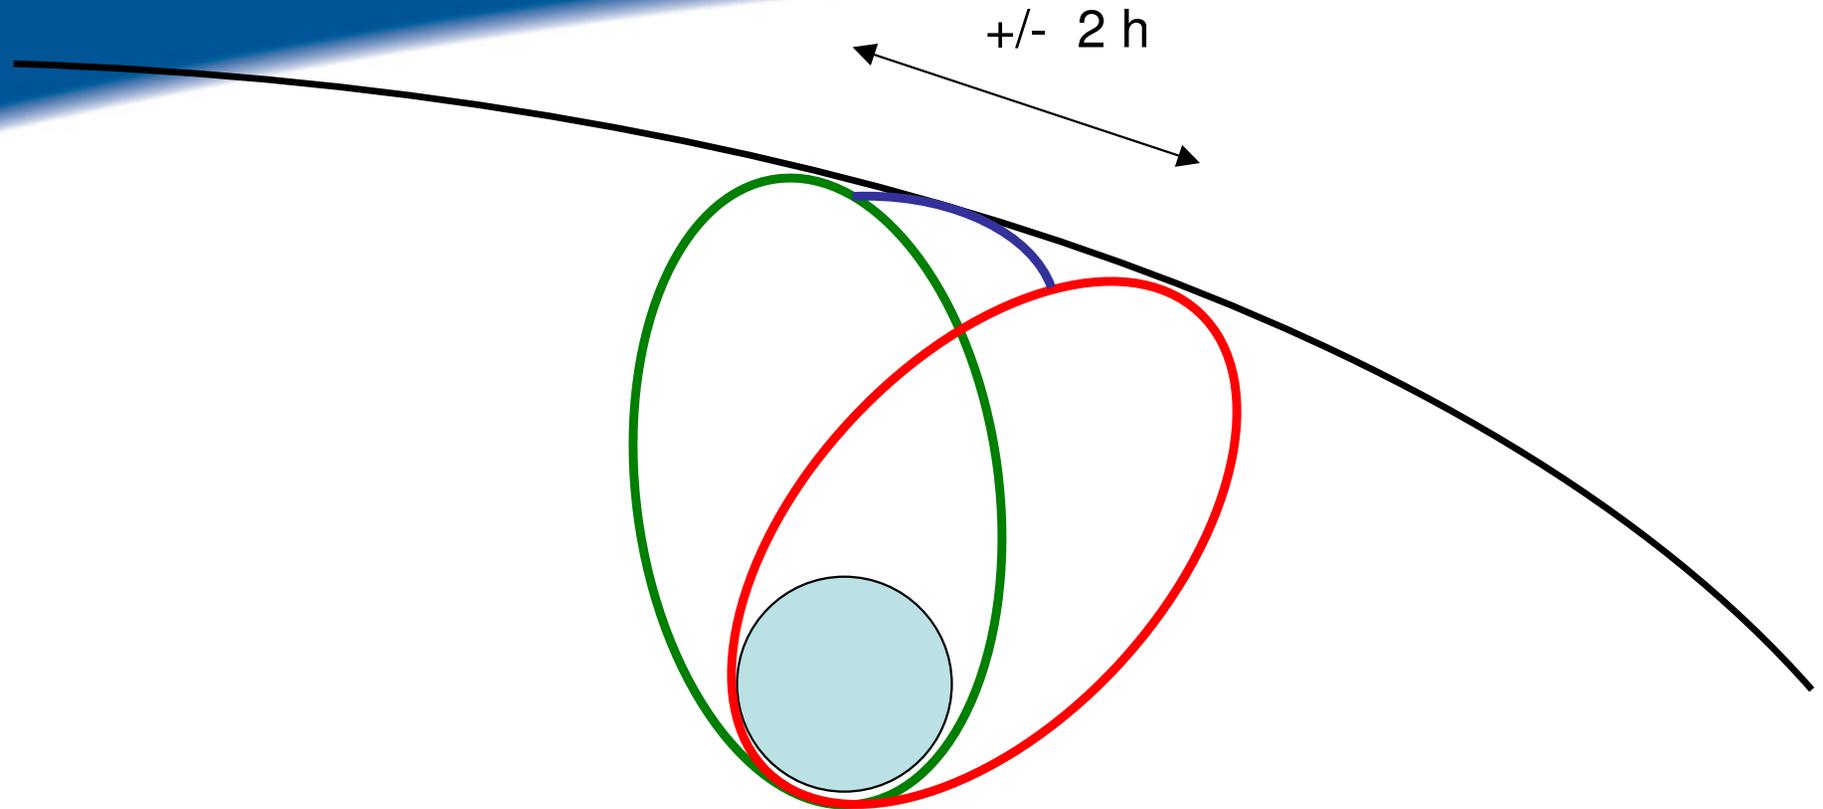

Observation criteria

Visual Magnitude <23

Elongation > 50°

periods	PdM 1m	ESO 8m
A: Feb. — May 2011	2h	1h
B: Nov 2011 Sep 2012	3h	2h
C: Dec 2012 June 2013	4h	7h

From visible and IR observations, expected improved knowledge in 2013 about rotation parameters, size, inertia, thermal inertia, preliminary 3D model

Single launch on a GTO like orbit @ $i=40^\circ$ a few weeks before APOPHIS pass

Impactor + impact imager @ tp-1 h

Data reception system prepositioned after the perihelion

Interior sounding under investigation (MEX Marsis, Rosetta Consert heritage)

- **IMCCE (Institute for Celestial Mechanics and Ephemerides Computation) is part of Paris Observatory**
- **Uses its own model INPOP (Intégration Numérique Planétaire de l'Observatoire de Paris) for the computation of the solar system ephemerides**
- **The results are totally independant from the ones produced by MPC or Pisa University who both use DE405 ephemerides from JPL**
- **High interest from this institute to be involved in the APOPHIS data processing**
- **Support from CNES can be envisioned as a contribution to the ESA's SSA Programme**

- **see <http://www.imcce.fr/>**
